**NATIONAL REGISTER OF HISTORIC PLACES  
REGISTRATION FORM**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

**1. Name of Property**

historic name Uptown/Parker-Gray Historic District  
other names/site number VDHR File Number: 100-0133

**2. Location**

street & number Roughly, Cameron St north to 1st St, and N Columbus St west to the following streets forming the western line: Buchanan, N West, and N Henry Sts. not for publication N/A  
city or town Alexandria vicinity N/A  
state Virginia code VA county Alexandria (Independent City) code 510 zip code 22314

**3. State/Federal Agency Certification**

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this X nomination \_\_\_ request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property X meets \_\_\_ does not meet the National Register Criteria. I recommend that this property be considered significant \_\_\_ nationally \_\_\_ statewide X locally. (\_\_\_ See continuation sheet for additional comments.)

Signature of certifying official  
Virginia Department of Historic Resources

Date

State or Federal Agency or Tribal government

In my opinion, the property \_\_\_ meets \_\_\_ does not meet the National Register criteria. (\_\_\_ See continuation sheet for additional comments.)

Signature of commenting official/Title

Date

State or Federal agency and bureau

**4. National Park Service Certification**

I, hereby certify that this property is:

- entered in the National Register  
\_\_\_ See continuation sheet.
- determined eligible for the National Register  
\_\_\_ See continuation sheet.
- determined not eligible for the National Register
- removed from the National Register
- other (explain): \_\_\_\_\_

Signature of the Keeper \_\_\_\_\_

Date of Action \_\_\_\_\_

5. Classification

Ownership of Property (Check as many boxes as apply)

Category of Property (Check only one box)

- X private
X public-local
public-State
X public-Federal

- building(s)
X district
site
structure
object

Number of Resources within Property

Table with 2 columns: Contributing, Noncontributing. Rows for buildings, sites, structures, objects, and Total.

Number of contributing resources previously listed in the National Register 0

Name of related multiple property listing (Enter "N/A" if property is not part of a multiple property listing.) N/A

6. Function or Use

Historic Functions (Enter categories from instructions)

Cat: DOMESTIC Sub: single dwelling
DOMESTIC multiple dwelling
DOMESTIC secondary structures

7. Description

Architectural Classification (Enter categories from instructions)

GREEK REVIVAL
QUEEN ANNE
ITALIANATE
COLONIAL REVIVAL
ART DECO/ MODERN

Materials (Enter categories from instructions)

foundation BRICK
roof ASPHALT; METAL
walls WOOD
other SLATE

Narrative Description (Describe the historic and current condition of the property on one or more continuation sheets.)

8. Statement of Significance

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- X A Property is associated with events that have made a significant contribution to the broad patterns of our history.
B Property is associated with the lives of persons significant in our past.
X C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
B removed from its original location.
C a birthplace or a grave.
D a cemetery.
E a reconstructed building, object, or structure.
F a commemorative property.
G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance (Enter categories from instructions)

- ARCHITECTURE
ETHNIC HERITAGE: African American
SOCIAL HISTORY

Period of Significance circa 1810-1959

Significant Dates N/A

Significant Person (Complete if Criterion B is marked above) N/A

Cultural Affiliation N/A

=====

**SUMMARY PARAGRAPH**

The Uptown/Parker-Gray Historic District is a large, level area comprising most of the northwestern quadrant of the Old Town Alexandria street grid as it was laid out in 1797. Although the street pattern was shown on maps by 1798, most of the land remained vacant until the 1860s, and nearly all the built resources currently in the district date from after 1870. Most of the resources are small row houses and town houses, but there are also many commercial buildings. The oldest houses are in the southernmost blocks and along the district's southeastern edge. Nineteenth-century architectural styles are found in restrained and simplified forms. The district's core area consists of a concentration of frame houses with details from late-nineteenth-century styles, mainly the Italianate and Queen Anne styles. In the southwestern corner and throughout most of the western half of the district in general, whole blocks are occupied by brick Colonial Revival-style row houses built by developers in three or four major campaigns in the twentieth century. The commercial buildings are nearly all brick. Buildings built for neighborhood-oriented businesses are found on street corners in the southern half of the district and in a small concentration of contiguous commercial buildings along Queen Street. The Queen Street business corridor was once the city's primary African-American business district. Nearly a fifth of the district's land area consists of warehouses and other large commercial buildings. The warehouses are concentrated in the northern blocks along two north-south streets (North Henry and North Fayette) that were formerly the routes of railroads. Smaller highway-oriented buildings, such as gas stations, are found along U.S. Route 1, which also passes through the district north-south along North Henry Street and North Patrick Street. More than 200 units of public housing, built between the early 1940s and 1959 as Colonial Revival-style row houses, are found in a seven-block area at the northeastern section of the nominated area (The district also contains a large non-contributing public housing development built in 1988.). The eastern and southern boundaries of the district follow the existing line of the Alexandria Historic District [placed on the National Register of Historic Places (NRHP) in 1966, amended 1984, and listed as a National Historic Landmark (NHL) in 1969] and the George Washington Parkway [placed on the NRHP in 1980]. Along the eastern and southern edges of the district, the architecture tends to blend in with that of the Alexandria Historic District.

**Integrity**

The physical appearance of the Uptown/Parker-Gray Historic District has not changed drastically in spite of dramatic changes in the demographics and socio-economic characteristics of the neighborhood's residents since the end of the period of significance. A large African American neighborhood in a city that was still effectively segregated in 1959, the area was in decline after 1960, saw some new construction in the 1970s, and then experienced an acceleration of growth as evidenced in a substantial wave of construction from the mid-1980s to the present. The district's non-contributing resources include many small houses, a few small commercial buildings, and several visually dominant large buildings and complexes built since the mid-1970s. The smaller buildings built since the mid-1980s, however, are generally in historic styles that blend in so well that it is often difficult to distinguish between recently restored historic houses and new infill ones. The concern for historic preservation, reflected in the large number of historic houses from within the period of significance that have been restored in the last twenty years, has enhanced the district's architectural coherence and, in so doing, has kept it from losing the integrity of the numerous original buildings that have never been greatly altered.

=====

**DEVELOPMENTAL ARCHITECTURAL HISTORY**

Although the Uptown/Parker-Gray Historic District lies entirely northwest of the original 1749 plat of the city, the part of Alexandria occupied by the present historic district was incorporated into the Alexandria street system as early as the 1790s. At that time, the city's plat was greatly expanded to about eight times its original size. The expansion of the grid occurred just as the city became part of the District of Columbia, a decision that was reversed in 1846.

Between 1798 and the 1860s, the northwest quadrant of the city remained largely vacant, despite the grid of streets and the construction of a few large residences. Even after 1860, the development of the area was uneven and included several temporary land uses, such as Civil War military installations that occupied numerous blocks of previously vacant land. The majority of the Uptown/Parker-Gray area did not begin to develop more coherently as a unified neighborhood until after 1870. Historic maps show that by the 1860s contiguous houses had been built in the areas that lie within two blocks of King Street (along Cameron and Princess Streets and between the two) and in isolated areas north of Princess Street along Oronoco Street and Columbus Street. While some of the earliest houses were brick, the main building form used in the district before the twentieth century consisted of frame town houses built in rows, often with either side-gable roofs or shed roofs and shared party-walls. The facades of the houses incorporated the characteristic details of the local versions of mid-nineteenth-century architectural styles, such as the Greek Revival and the Italianate. However, where open areas remained between houses, exposed side elevations were most often left plain with no windows or ornamental details, possibly an indication that future infill developments were anticipated with the construction of each freestanding house. Within the limited areas of dense development that had appeared by the 1860s, a few brick houses from the early nineteenth century are still extant, sometimes found in pairs, as two-story side-gable Greek Revival-style forms. However, of the remaining buildings that were built between 1863 and 1877,<sup>1</sup> the majority are wood frame town houses with nearly flat shed roofs.

Beyond the southern and southeastern blocks of the current district, only a few other buildings had been constructed by the 1870s, and most of them have been subsequently demolished. While approximately 80-90 percent of the platted land north of Princess Street remained unoccupied by any permanent buildings until at least a decade after the Civil War, there were a few instances where an individual block contained one large residence or a few smaller ones. Prior to the 1870s, rows of modest-sized dwellings that filled one side of a street, from intersection to intersection, were the norm in other parts of Old Town; however, rows of this kind appeared in only a couple of locations in the Uptown/Parker-Gray area in the first 75 years of the street grid's existence. There were a few cases where a city block contained one large residence surrounded by outbuildings. The grounds of one or two of the large houses appear on maps to have occupied two or three contiguous blocks. In other blocks, found in between those that contained the larger properties, small houses were found on scattered parcels so that they were somewhat isolated from one another. Of the large houses, not a single example remains extant. The first houses to appear in any given block were almost always built on confined parcels, and the house was usually placed near the front edge of the property in a way that anticipated development of other houses on the neighboring lots. Only a few of these smaller houses survived to the present. In general, they are found within contiguous rows that developed as new row house forms were aggregated around them. There were very few institutional buildings in what is now the Uptown/Parker-Gray area prior to 1880. In one or two instances, institutions (such as churches) are still found at the same location in the neighborhood; however, the current buildings at these locations were all built, or substantially re-built, after 1880.

***Uses of Land that Remained Undivided Contrasting with Subdivided Residential Areas***

Blocks of land that remained undivided in the core of the district until the late nineteenth century lent themselves to uses that differed greatly in character from the subdivided residential parcels found in the district's eastern and southern blocks. Some of these "open land" uses were temporary and, consequently, portions of the neighborhood changed in character several times before the current historic resources were built. However, the open land resulted from the neighborhood's slow, uneven growth and, simultaneously, the variety of land uses reinforced the unevenness. One of the earliest examples of a military-related low-

=====

density land use was a powder house that was built near the southwest corner of the neighborhood in the late eighteenth century. Sparse development made this corner of the district an ideal location for this kind of a land use. The building was sold and demolished about 1818 before there were more than a few residences on the adjoining blocks. Another block of land, toward the northeastern corner of the neighborhood, was used as a parade ground for military exercises from the War of 1812 to the Civil War. Maps showed it as a grove of catalpa trees as late as the 1870s. By the Civil War, railroad tracks had been laid through the neighborhood's core along the center lines of two of the north-south streets. During the war, the Union Army made extensive use of the vacant areas as sites for encampments, hospitals, stables, and several large food-production facilities from which bread and other items were shipped to soldiers in various battlefields. (No known above-ground resources from any of these military uses remain in place, but the sites may have archeological potential.)

***Large Estates by the 1870s***

Two or three substantial houses occupied large sites within the district's boundaries beginning in the early 1800s. One of these (Bell Aire, later named Colross) was the home first of a prominent city councilman, followed by an important early mayor of the city. The house later became the home of the city's leading planing-mill owner. By about 1880, the neighborhood's largest houses had been converted to non-residential uses, and Colross, in particular, had become a storage facility within a lumber yard operated by another planing-mill owner. (Colross was moved in 1929 to Princeton, N.J., where it was used to house the Princeton Day School; no other resources from large estates that occupied the nominated area are known to be extant, but the sites may have archeological potential.)

Several whole blocks of the Uptown/Parker-Gray Historic District were owned by prominent individuals or families by 1877.<sup>2</sup> A large tract covering at least two city blocks along North Patrick Street within the district was part of the estate of Henry Daingerfield, a wealthy Alexandria merchant. One of these blocks was cleared for the construction of Parker-Gray Elementary School in the twentieth century. The Daingerfield Estate also included a block of land at Pendleton and Washington Streets (a block east of, and outside, the Uptown/Parker-Gray district boundary). In 1877, Belle Aire (which had been renamed Colross, as mentioned above) was also known as the Mason Estate. The land associated with the Mason Estate occupied the two-block area bounded by Oronoco, Wythe, Henry, and Fayette Streets.<sup>3</sup> The Samuel Miller estate occupied the block bounded by Oronoco, Pendleton, Payne, and Fayette Streets. (No buildings associated with any of these large estates are known to be still standing.) Townsend Baggett owned a large tract west of North West Street, between Cameron and Princess Streets, including the present location of the Jefferson-Houston Elementary School complex. In 1877, other owners of larger tracts in what is now the Uptown/Parker-Gray Historic District included Thomas W. Swann, John W. Green, George and John Seaton, William C. Yeaton, William Gray, a Mrs. Jacobs, and a family named Smith. One or two of these owners may have been investors speculating on future development of the neighborhood. The Yeaton, Jacobs, and Green properties contained some of the first small houses erected on subdivided building lots in the district.<sup>4</sup> One of the owners, George Seaton, was an accomplished master builder and one of the wealthiest African American citizens of Alexandria at the time.

***Residential Blocks with Smaller Parcels Developed One at a Time***

By the 1860s, developers had begun to build a few rows of frame townhouses on other blocks, creating an urban residential neighborhood block by block. One of the district's oldest extant examples of row houses where the same design was repeated across several units can be found at 722-726 Columbus Street. The three units are part of what was originally a slightly longer row built by local grocer Joseph Laphen in 1861 or 1862 (the row was a couple of units longer until at least the 1950s, but the northernmost parcels in Laphen's project are now occupied by new buildings). Among the other locations where row developments were in place by 1863<sup>5</sup> are the 500 block of North Columbus Street and the 200 block of North Henry Street. Thomas Downey owned a row of houses in the 800 block of Oronoco Street in 1877, some sections of which may have been built at one time in a unified design. Queen Anne- style row buildings began to appear in the district by the end of the nineteenth century. The frame rows with bay windows at 513-531 Alfred Street and 700-720 Columbus are examples. Along some other streets, rows were formed slowly as the new individually built houses were inserted on vacant parcels using the side walls of existing houses as party walls. These aggregated rows are discussed in further detail in the section on Architectural Significance

=====

in the Statement of Significance (Section 8).

***Uneven Growth Spilling over from Neighboring Areas***

While a few examples survive from the earliest residential growth that spilled into the neighborhood along the district's eastern and southern edges, almost nothing remains above ground today of the factory buildings that developed at the district's corners. Activities that began before 1870 outside the present boundaries led to waves of development in the district in several generations. The factory sites evolved into other uses by the mid-twentieth century, and most of the industrial buildings were replaced by large-scale buildings built for non-industrial or light industry uses. Eventually the larger factory buildings along the corridors that formerly contained railroad lines had been replaced with new industrial buildings and warehouses, and these were replaced by newer warehouses and other large-scale commercial buildings, some constructed after the railroad lines were removed. Among the most recent contributing examples are a large brick warehouse built in two phases, in 1951 and 1958,<sup>6</sup> filling the block between Pendleton, Wythe, N. Fayette, and N. Payne Streets. It has served through most of its history as a warehouse facility for the Federal government's Printing Office. Another example is the large building that the R.C.A. Company built in the block between Madison, Montgomery, N. Fayette, and N. Henry Streets in 1955. It contained a research laboratory, although a small portion of it was occupied by a frozen food warehouse in 1958.<sup>7</sup> By the 1960s and 1970s, the sites of large-scale buildings on about half of the blocks west of North Henry Street and north of Oronoco Street were seen as logical places to build new buildings of the same scale because the real estate in each case was already assembled under a single ownership. As a result, two or three blocks of mid-rise apartment buildings and office buildings have been built in this quadrant of the Parker-Gray area since then, as well as a large post office built in 1985 at 650 North Henry Street (occupying most of the block between North Henry, North Fayette, Wythe, and Pendleton Streets).

While some blocks of the district at the eastern and southern edges have a few pre-Civil War houses or commercial buildings, most of the extant historic residences within the district's boundaries were built after 1870. By the 1870s, the Uptown/Parker-Gray area had become a patchwork of different kinds of buildings and structures, with open land at the center and smaller residential enclaves at the fringes. What began as a few tiny residential enclaves along the southern and eastern edges of the district in the nineteenth century gradually came to be considered part of the larger neighborhood of Uptown/Parker-Gray, especially after the city built a segregated school for African American citizens in the neighborhood in 1920.

***Differing Architectural Styles Correspond to Growth Patterns within the District***

The most common architectural styles and building types are found in patterns that correspond to the development of the neighborhood. The blocks closest to King Street developed first, and thus the area south of Cameron Street contains the district's oldest buildings. The 100 block of North Patrick Street contains the only concentration of pre-1830 buildings in the district, including a contiguous row of brick buildings with Federal-era stylistic details such as flared lintels. There may have been other similar houses in the 100 blocks of the other north-south streets at one time, but the buildings were replaced by later generations of development, and these areas are now occupied by large buildings from the 1970s through the 1990s. The 200 and 300 blocks of North Patrick Street, from Cameron to North Princess Street, contain the district's largest concentration of buildings with Greek Revival-style characteristics, including a series of side-gabled frame houses lined up along the west side of the street without interruption. This is one of the only places in the district where houses from this period (1830s-1860s) and style occur in a group of more than three residences without any buildings of later styles intermixed.

The Greek Revival-style houses have been greatly altered over the years, so that several of them now have twentieth-century replacement siding and replacement windows, but the style is still apparent in their boxy side-gabled forms and in the proportions of the window openings. Other Greek Revival-style examples are found in both freestanding and paired houses on scattered sites throughout the district, consistent with the distribution pattern that is apparent on maps of the district made during and shortly after the Civil War. Beyond these limited areas, frame town houses with Italianate-style or Queen Anne-style details represent the most common category of buildings in the southern half of the district (for example, the 200-600 blocks of North Payne, North Fayette, and North Henry Streets, on the east side of North West Street, in the 300 through 600 blocks of North

=====  
Patrick Street, and along the east-west cross streets in the same area, including Queen, Princess, Oronoco, and Pendleton Streets; this area comprises the district's residential core area, an area of approximately twenty city blocks.)

***Orientation of Building Lots and Townhouses***

Generally, while most of the frame town houses are found aligned in rows along the north-south streets, town houses were also built facing the east-west streets. With some key exceptions, there are far fewer houses facing east-west streets in the typical block than those facing north-south streets. The pre-1900 residential parcels were laid out with a narrow frontage on whichever street the future building was presumed to face, so that the subdivision plans for each block set the pattern for orientation. The orientation of the parcels tends to alternate from block to block. In the majority of the blocks, almost all the narrow street frontages face onto the north-south streets, while in the remaining blocks they face the east-west streets. An example of a city block with the houses mainly oriented to the north south-streets is the block bounded by North West Street, Queen Street, North Payne Street, and Cameron Street (almost all the houses in this block face either North West Street or North Payne Street and have addresses in the 200s). An example where nearly all of the parcels face the east-west streets is found in the block bounded by North Henry Street, Princess Street, North Fayette Street, and Queen Street (addresses in the 300s along Queen Street and Princess Street). The alternation does not appear to have been set according to any logical pattern, at least in the older blocks at the center of the district. However, although it is not perfectly consistent, the alternation does make some east-west streets (such as Queen Street) more prominent than some of the others. The result is both a sense of urban continuity as streets in both directions appear to be uniformly urbanized, because houses appear to be facing in all directions at some intersections, and a sense of discontinuity in those areas where the development is less dense and where the side or rear elevations and backyards of some of the buildings are visible from major thoroughfares.

In most areas of the district, the choices of which blocks would have building lots oriented to the east-west streets and which would have parcels oriented to the north-south streets apparently came about as the city blocks were subdivided, or partially subdivided, by private owners one block at a time for the district's earliest residential developments. Many of the blocks where building lots were oriented to have the buildings facing east-west streets were surveyed with east-west alleys behind the houses. It is possible that some of the alleys predated the division of the smaller parcels. The location of alleys running parallel to Queen Street, on both sides, reinforced the street's importance as one of the neighborhood's major east-west streets (since placing the alleys with an east-west orientation made it easier to build buildings facing Queen Street and cut down on the number of alleys that cross Queen Street). These characteristics, in turn, made Queen Street a logical place for neighborhood commerce.

***Pre-1830s Architecture***

The urbanization of the neighborhood, by way of construction of small buildings, clearly occurred in a pattern that grew from south to north. The neighborhood's earliest buildings are in the 100 block of Patrick Street where some of the buildings exhibit architectural flourishes of the Federal era. However, the next earliest concentration of buildings is found one block farther north on Patrick Street in the 200 and 300 blocks, essentially the same area where the neighborhood's earliest African American families had settled by the 1810s.

***Greek Revival-Style Buildings***

The Greek Revival-style buildings, though scattered on various sites in the district, are mainly found in areas within three blocks of King Street. Usually two or three bays in width, they frequently appear as two or three co-joined units. In a few instances, shared first-story alleyways are found passing between two paired units (or sometimes to the side of a single unit). The alley passages are narrow and almost go unnoticed. In general, the houses are two stories in height with no evidence of living space at the attic level, although two or three of the houses in the blocks closest to King Street have dormers of a size that appears to indicate a usable half story. A few of the Greek Revival-style houses near the intersection of Patrick Street and Cameron Street are brick, and one or two have contained neighborhood stores at various times in their history, as evidenced by extant storefront details even in the buildings that have found other uses and no longer have the glass in place.

**Section   7   Page   7**

=====  
Apart from this small area, the Greek Revival-style buildings north of Cameron Street are almost all frame. Although a large proportion of the frame buildings have ornamental wood details in the cornice lines and in the door and window surrounds, in many cases the details are consistent with remodeling campaigns that occurred the 1870s or 1880s when the Italianate, Second Empire, and Queen Anne styles were popular. About half of the Greek Revival-style houses still have six-over-six windows, though many have two-over-two wood replacement windows dating from the 1870s or a little later. Chimneys are found in a variety of locations, including ones that are centered in the ridge of the roof and shared by two residences, ones that are centered in the ridge of the roof and shared by front and back rooms in the same unit, and ones in the outside walls that are centered in the slope of the roof above a single room in each story. There are only one or two examples of bridged chimneys or any other firewall details among the Greek Revival examples. Only a handful of the oldest houses have gauged-brick lintels or ornamental brickwork in the cornice line. All the brick examples are in American bond except for two or three that are in Flemish bond.

***Frame Townhouses with details of the Italianate, Queen Anne, Related Styles***

Beyond these early Greek Revival examples, the dominant form for both houses and store buildings in the core area is that of a town house with a nearly flat shed roof. The houses are most often frame, although a few are brick. Almost all of them have some details derived from the Italianate style or from related styles that were popular in the 1870s and 1880s.

About a third of the townhouses have a false mansard across the top of each house's facade. Nearly all have bracketed cornices at the top of the façade, whether incorporated into a false mansard or serving in place of the detail. Most of the frame houses have covelap siding,<sup>8</sup> although many of them have modern siding over the original wood. A very small number of the frame houses have been re-faced in either brick or stone in the twentieth century. The houses are usually two bays wide, but some are three bays or more. The windows appear to have had two-over-two sashes in most instances, although six-pane sashes are also common, as are all the different twentieth-century replacement styles, from bungalow windows (three-over-ones, four-over-ones, etc.) to vinyl or aluminum one-over-ones.

On the majority of the façades, the doorway has a decorative architrave, sometimes incorporating a door hood or canopy. In general, the decorative trim is almost entirely confined to three façade elements: the cornice or false mansard, the doorway, and to a much lesser degree, the window surrounds. A common detail in the houses that have false mansards is a triangular ventilator with louvers, centered in the mansard area. In general, the houses have very little exposed foundation material, often confined to three or four courses of brick. Nearly all of the doorways have either a stoop or at least a small set of steps, two or three risers in height. The stoops exhibit very few flourishes because the floor line is typically so close to grade. Porches are found on only a few of the district's nineteenth-century houses. In some confined areas of the district, much more ornamentation is found, including porches, bay windows, and decorative surface materials. The more decorative examples tend to be located on North Columbus Street, along Cameron Street, west of North Fayette Street, and in other areas at the outer edges of the neighborhood. These may have been areas where housing developments were geared to the city's white residents in the 1870s, before the African American community had grown out that far from the neighborhood's core area. They appear to be areas where the residents or builders were wealthier than those in the district's core area.

***Commercial Buildings that Take the Same Overall Form as the Townhouses***

The neighborhood commercial buildings that served the core area of the district, where the concentration of frame houses are, appear to have originally been built in the same architectural form and style, on scattered sites, often at street corners. Some of these were built as houses and converted to commercial uses over time. The ones that were built to have stores in them, but are now houses or offices, often have features that give away this former use, such as remnants of storefront cornices or sign bands above a large recently closed-in opening. Two good examples are the commercial building at 1000 Pendleton Street and the former bakery building at 1022 Pendleton Street. The building at 1000 Pendleton has been clad in stone and a large office wing (treated in the inventory as a separate building) was added at the rear of the building, facing North Patrick Street (520-524 North Patrick Street). In spite of the stone veneer and other twentieth-century alterations, the building at 1000 Pendleton retains enough of its original form to convey the feeling of a frame commercial building built on the model of an Italianate-style town

**Section 7 Page 8**

=====

house. The commercial building at 1022 Pendleton Street was the long time home of a successful African American baker whose bakery was a well-known institution in the neighborhood. The part of the building on Pendleton Street was the baker's home, but the first story became a commercial space as the owner's enterprise grew. The bakery itself was in the rear part of the building, in what had begun as a separate frame townhouse with the address of 521 North Henry Street. In time, the two buildings, both of which are frame town houses in form, grew together into one commercial and residential complex.

***Corner Store Buildings and Commercial Activities in the District***

In addition to the commercial buildings that had a town house form, by the 1880s and 1890s, some brick commercial buildings which were more typical in character of commercial buildings of the era had appeared in the district. However, the standard "Main Street" ensemble of storefront forms on contiguous parcels is notably absent in the district. Several variations on corner store buildings can be found at the intersections of Queen Street as it crosses North Patrick and North Henry Streets. Eventually, Queen Street became like a main street and served as the city's most important African American commercial area, but architecturally it was composed of corner buildings, converted homes, two large twentieth-century theater buildings, and a row of small shops that were built as part of one of the theater developments. Therefore, small corner store buildings, designed for local neighborhood use, were important in the establishment of the neighborhood's one main street-like business corridor.

One of the oldest commercial buildings in the Queen Street area is found at 300 North Patrick Street in a Greek Revival-style building with some Italianate-style details. The building has been modified several times, including the insertion of storefront windows and the reduction of these windows after the building's use changed. The building housed the Royal Meat Market before it relocated to a new Art Deco-style building across Patrick Street (301-305 North Patrick Street) built for the meat market in 1941. Diagonally across the street is a two-story, brick, commercial building (924 Queen Street) built about 1900 with a corner entrance. This building served for many years as a neighborhood drug store. Modestly Colonial Revival in style, it is a good example of the stylistic detailing found on a somewhat plain commercial building at the end of the brief period when the Queen Anne style had been popular.

***Nineteenth-Century Church Buildings in the District***

The district contains several examples of late-nineteenth-century churches. The two most outstanding architecturally are Third Baptist at 919-921 Princess Street and Ebenezer Baptist at 907-909 Queen Street. Both were essentially constructed in the 1890s, using details from the Richardsonian Romanesque style that was popular across the country at the time, although Third Baptist was apparently in part a rebuilding of an older edifice that suffered substantial damage in a hurricane in the mid-1890s.<sup>9</sup> Both churches are mainly constructed of brick, with round-arched openings, heavy massing in the design of the façade and exterior form of the narthex, and rock-faced ashlar arches, belt-courses, and other details of the Richardsonian Romanesque style.

***Brick Row Houses in the Outer Blocks of the District***

By the first half of the twentieth century, the character and style of the core area of the nominated district had essentially been established. Based on the physical evidence, this part of the district appears to have remained relatively unchanged for several decades, perhaps because it was home to an ethnic community of families who were both socially stable and of limited means. However, in the blocks surrounding the core area, to the east, south, and west, new brick row houses were constructed in development projects that often entailed the construction of ten or more units at one time. One of the earliest examples of a twentieth-century brick row house development in the district is found in the 600 block of North Alfred Street. Here a version of the Colonial Revival style that was typical of construction about 1910 was used to build eight identical houses (604-618 North Alfred Street) and a corner store building in the same style (at 600 North Alfred Street). Each house had its own one-story porch with Tuscan columns made of lathe-turned wood. In time, the row was extended with similar (but not exactly matching) houses, found between 620 and 636 North Alfred Street. Several of the houses at the center of the second segment of the row were built using concrete block, sometimes with rock-face details or rustication. These row houses were perhaps a harbinger of what was to come in the southern and eastern parts of the district.

City of Alexandria, Virginia**

**Section 7 Page 9**

=====  
About 1915, Colonial Revival-style brick row houses were built in several different construction campaigns, in the 100 blocks of North Peyton Street, Baggett Place, and Harvard Street, and in the 1400 block of Cameron Street. Almost all the houses in the above-described blocks were constructed around 1915 as part of row house projects. The rows vary from six to 13 contiguous units, although most are between seven and eight in length. The only row with more than eight, the 100 block on the eastern side of Harvard Street, actually consists of two different styles of houses constructed in two different campaigns at slightly different times. With the exception of the houses at Baggett Place, which were built later, all the units in these blocks built in the 1910s have Colonial Revival-style porches with turned Tuscan columns or similar details.

By the 1940s, at least one larger row house development had been established in the area along Buchanan Street, in the western-most blocks within the nominated boundary. Most of the row houses along Buchanan Street and within several blocks of it were built as part of one project known as Alexandria Village. Alexandria Village was created to make affordable rental units available in the area, and the units were initially limited by lease to white residents only. The Alexandria Village houses, which are set back on a gently sloped terrace, have a simple design of brick walls rising as parapets with diapered brick and other decorative details in the face of the parapets. In some places, the parapets are stepped to give special emphasis to the end units. Each unit had its own stoop with a wrought-metal railing. The windows were originally metal casements. The Alexandria Village plan continued across the railroad tracks into what is now the neighborhood of Rosemont [Rosemont Historic District, NR 1992]. When the railroad tracks were raised around 1980, the effect was to divide the neighborhoods along a new line, as the tracks had not previously been seen as separating the Buchanan Street houses from Rosemont.<sup>10</sup>

Within the area just northeast of Buchanan Street, there are several short streets with brick houses that resemble those of Alexandria Village, although they were built in two or three variations including side-by-side duplexes and four-units buildings. These houses have the brick parapet details and some of the same ornaments found on the Buchanan Street row houses. The side-by-side duplexes are found along Boyle Street and on the south side of Princess Street. Along the north side of Princess Street and along Earle Street, which extends a block or two further north from Princess Street, the houses were built in rows of four to six units with creatively designed cast concrete architraves at the doorways. Some of the units have built-in cast concrete flower boxes doubling as window sills.

Brick row houses that were similar in character to those in the Alexandria Village area were also built in the 500 blocks of North West and North Payne Streets and on the side streets, Pendleton and Oronoco Streets, so that the entire city block and some of the areas facing into the block from across Oronoco, Pendleton, and North Payne Streets all have matching, or nearly matching, architecture. In general, the houses of this type found north of Pendleton Street were built in contiguous rows, set back behind front yard garden spaces, sometimes on slightly terraced sites. Other brick row houses that are similar in style and character are found in a few other blocks in the district, such as the 400 block of North Henry Street. The houses in the 400 block of North Henry Street are the only ones in which the English garden apartment model was followed in the front yard landscaping, with a series of brick piers and fences defining a separate garden space in front of each unit.

***Lodge Buildings and Recreation Facilities***

The buildings built in the district for fraternal societies and other recreational facilities were nearly all constructed for the African American citizens in the era of segregation. Most are brick and constructed in the Colonial Revival style between 1900 and 1950. A good example is the building built for the Improved Beneficial and Protective Order of Elks (IBPOE) in 1904. The building was designed to resemble a five-bay, side-gabled, Greek Revival-style or Georgian-style house, with a large front porch. An addition was constructed in 1932 more than tripling the size of the facilities. As a fraternal organization, the IBPOE was created nationally in 1897 for African Americans interested in participating in the organization of Elks lodges, after the older national lodge organization, the Beneficial and Protective Order of Elks (BPOE) decided to bar African Americans from membership. Nationally, the all-white organization took the new African American organization to court over the similarity of the name, but eventually the lawsuit was dropped and the two organizations decided to coexist peacefully. It appears to be an

City of Alexandria, Virginia**

**Section 7 Page 10**

=====  
indication of the strength of the African American community in Alexandria that the community built such a large Elks club building only a few years after the African American organization came into existence nationally. Over the years, the building was the scene of performances by a number of nationally known African American entertainers. Several other fraternal lodges and other kinds of community-based organizations built or owned buildings in the district in the first half of the twentieth century, but no other organization had facilities as substantial, architecturally distinguished, or long-lasting as the Elks lodge.

By the late 1930s, the city and various philanthropists were building Colonial Revival-style buildings in the district to provide educational and recreational facilities, mostly for the African American community. These included the construction of the Colonial Revival-style Alexandria Boys Club built at 401 North Payne Street in 1936, the small Colonial Revival-style building built for the Robinson Library at 638 North Alfred Street in 1940, and the two recreation center buildings built to serve as USO clubs during World War II. Unlike the Robinson Library building, which is architecturally restrained and looks too small to be a library, in part, because of its remarkably small windows, the Boys Club building has many large windows in a raised basement story and in the two stories above it. The window and door openings all have gauged brick lintels accented by a keystone in granite or limestone above the center of each opening, and the bricks in the walls are worked into reverse quoins at the corners. The USO building built for the African American community at 1005 Pendleton Street was demolished by the 1980s, but another USO building is still in existence as part of Jefferson-Houston School at 1605 Cameron Street. Like the Boys Club building, it is a rich Colonial Revival design showing attention to detail, with round-arched windows and massing that is organized as a cluster of nested pavilions with an inset porch. While there are considerable differences in the variations on the Colonial Revival style used in these three examples, they are all good examples of how the style was used for civic buildings at the time.

***Large Warehouse Buildings***

Since at least as early as the Civil War, the district has had large warehouse-type buildings and some manufacturing buildings in the blocks closest to the former railroad lines (along North Fayette and North Henry Streets). Many of the buildings on sites that became warehouses or manufacturing locations have been rebuilt several times, so that some contain buildings from the 1950s and some contain much more recent buildings, built since the mid-1980s. Part of the site of the current post office along Pendleton Street, between North Fayette and North Henry Streets (530 North Henry), was a tire and furniture warehouse at the end of a railroad spur in 1958. The building had previously been a hay and feed warehouse. On the opposite side of Fayette Street, at 512-516 Fayette, a row of warehouse facilities that served as furniture storage in the 1940s is still standing, now part of 500 North Fayette, where the corner unit was built as an automobile dealership. Part of this row was under construction in 1941 according to the Sanborn map of that year. At some point between 1912 and 1921, a warehouse was built at the corner of North Henry Street and Cameron Street (1019 Cameron Street) as a location for Armour and Company Wholesale Meats. The building is still in place and has a commercial use. It retains a linear porch-like shed and loading dock, similar to a railroad station platform, on the North Henry Street side where a railroad spur once ran along side of the building to a terminus at Cameron Street. Across North Henry Street, at the same intersection, a large new building is currently under construction at the long time location of the freight depot and passenger depot buildings of the Washington Southern Railroad (known in 1877 as the Alexandria & Washington Railroad).

The RCA Building at the intersection of Montgomery and North Henry Streets (800-840 North Henry Street) was built on the site of the Belle Pre Bottle Company. Several large new buildings to the north and northwest of the RCA Building occupy city blocks that once had industrial uses. These buildings, which are recent developments in the evolution of this industrial and railroad-related corner of the district, are outside the nominated district boundary because they were built after the period of significance.

Some other large warehouses appeared in the district at various times near the railroad tracks on city blocks that had remained undeveloped for many years, perhaps because of the industrial character of the northwest corner of the neighborhood when the railroad tracks were still in place. The United States Government Printing Warehouse, for instance, occupies the block defined by North Fayette, North Payne, Pendleton, and Wythe Streets. It was built in two "C"-shaped phases, in 1951 and 1958, on a

NATIONAL REGISTER OF HISTORIC PLACES  
CONTINUATION SHEET

Uptown/Parker-Gray Historic District  
City of Alexandria, Virginia

Section 7 Page 11

city block that contained only one small house as late as 1941<sup>11</sup> Like the Government Printing Warehouse building, the larger warehouse buildings in the district tend to be flat-roofed, single-mass brick buildings with almost completely unembellished exterior walls rising as parapets that conceal the roofs. The buildings often fill the entire parcel to the edge of the sidewalk and have undistinguished windows and doors, making it difficult to tell which side is intended to be the front and where the main entrance is located.

***Smaller Warehouses***

The district contains a number of smaller warehouse buildings, generally of makeshift design, incorporating buildings built at different times for differing purposes. An example is the Comico Milk Products Building at 727 North Henry Street. The building housed a dairy products distribution company at least as early as the 1940s.<sup>12</sup> The part of the building facing North Henry is a commercial building oriented toward North Henry Street, although set back from the street a few feet. It has a diapered brick parapet facing North Henry. At the rear of the building, facing Madison Street, a section of the building has been expanded to three stories in height by the erection of a metal frame structure over the last two bays of the brick building. The metal-frame section is clad in corrugated metal siding from the 1930s or earlier. It has an overhanging steel hoist and a third-story door for loading materials. Adjoining the three-story section, one or two smaller shed-roofed frame commercial buildings along Madison Street appear to have been incorporated into the Comico complex in the 1940s. They have subsequently been covered with siding so that they no longer appear to be separate buildings (although the two siding-covered, shed-roofed frame sections now contain a small grocery store and a carry-out food business that is separate from the three-story metal section of the Comico complex). A similar complex had evolved by 1941<sup>13</sup> for the Check Soda Company, at 223 North Payne Street, incorporating several different pre-existing buildings, which are all covered now in matching siding.

***Art Deco-Style and Moderne-style Commercial Buildings***

While the district's warehouse buildings are generally very plain flat-roofed brick buildings, about a dozen commercial buildings were built in the district with more ornamental detail in the Art Deco and Moderne styles between the 1930s and 1950s. Most of these buildings were either built for retail establishments or as motion picture theaters. The two theater buildings on corner sites along Queen Street (1120 Queen Street and 300 North Henry Street) are among the most notable examples. Although the older and smaller of the two theaters, the Capitol Theatre, built in 1939 at 300 North Henry Street, is plain in comparison to the Carver Theater, which was built in 1948. However, both buildings incorporate curved brick walls at the street corner. While the Capitol Theatre building is a simple flat-roofed cubic form with a curved corner, the Carver Theater (later called the King's Palace) uses the curved brick forms to create an undulated façade that appears to be layered with curved walls placed symmetrically around a corner entrance. A block or two east of the theater buildings, at 301-305 North Patrick Street, architect Paul S. Lubienski designed a new building for the Royal Meat Market in 1941. Instead of curved forms, here the Art Deco style is expressed by way of rocket-like buttresses with stone-capped stepped tops. Although all three buildings have been modified to retrofit them to new uses, the Carver Theater retains more integrity than the Capitol Theatre and Royal Meat Market buildings. At the Royal Meat Market building, the commercial display windows have been greatly reduced in size to retrofit the building for use as an educational annex to Ebenezer Baptist Church. On the other hand, the Capitol Theatre building has been altered (while this nomination was in preparation) by the insertion of commercial display windows along what had been blank brick elevations. A good example of the stone decorative features used on steel frame buildings in the Art Deco style is found in the form of a one-story retail building at 601-603 North Columbus Street. Under construction when the 1941 Sanborn map was prepared,<sup>14</sup> it was later converted to offices by reduction of the display windows and insertion of Colonial Revival details in their place. However, it still has stone pilasters with bas-relief fluting that define the building's structural bays. Other Art Deco- or Moderne-style buildings include a building apparently built in the 1950s to house an established tin shop at 600 North Henry Street, the 1931 St. Joseph's School building at 721 North Columbus Street, and six or seven less prominent examples distributed throughout the district

***Highway-Oriented buildings***

A number of highway-oriented buildings had been built by the 1950s, especially along North Henry Street (the south-bound

**United States Department of the Interior  
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES  
CONTINUATION SHEET**

**Uptown/Parker-Gray Historic District  
City of Alexandria, Virginia**

**Section 7 Page 12**

lanes of U. S. Route 1). These include a gas station at 434 North Henry Street, auto repair shops at 216, 226-228, 701, and 725 North Henry Street, a battery repair and/or recapping shops at 516 and 722 North Henry Street, and a number of restaurants along the same corridor. Within a block east or west, other auto repair businesses were found along side streets, alleys, and notably around the 500 block of North Fayette Street where there was an automobile dealership (500-508 North Fayette Street), a truck repair shop (510 North Fayette Street), and an auto repair shop (519 North Fayette Street), all by 1958.<sup>15</sup> Several other buildings that housed filling stations or auto repair shops in 1958 have been demolished recently to make way for large development projects.

Among the restaurants that cropped up along North Henry Street by the 1950s, a notable example is the Blue Silver Diner building (now the Blue and White Carry Out), a prefabricated metal frame building placed at the corner of North Henry and Wythe Streets (631 North Henry Street) in 1951. The building was manufactured by the Silver Coach Company of Orlando, Florida. Still in place, it has had numerous owners and has changed names several times since the 1950s.<sup>16</sup> The building is largely intact behind an exterior wall of aluminum siding that was added to enclose what had previously-been a five-sided canopy. With the enclosure, the building now looks unnaturally short.

***Public Housing***

The district contains more than 200 units of public housing, built in several different projects. Within the nominated district boundaries, public housing occupies three distinct areas: 1) an area of approximately six and a half blocks, including five and a half blocks at the northern end of the district bounded by First Street, Wythe Street, North Columbus Street, and North Henry Street and extending south of Wythe for three-quarters of a block bounded by North Columbus, North Alfred, and Oronoco Street; 2) half of a city block along North Patrick Street south of Oronoco Street; and 3) a block of land along the south side of Princess Street between North West Street and North Earle Street. The largest of these, the five-and-a-half-block area at the north end of the district, consists of two projects by name: part of Samuel Madden Homes (the main part of this project was several blocks east of the district boundary) and James Bland Homes. The James Bland Homes project was built in two different phases, with a four-block area constructed in 1954 and a final block (known as the James Bland Addition) constructed in 1959.

The Samuel Madden Homes and the two parts of the James Bland Homes project were all the work of the same architect, Joseph Saunders, and roughly follow the same design. The design involves side-gabled row houses, sometimes with six or more repeated in a row, placed around landscaped garden areas that are oriented to face onto the north-south streets. The individual units have very little ornamentation, but the detailing is all consistent with the Colonial Revival style, incorporating brick walls, side-gabled forms, pedimented architraves at main entrances to the units, and multi-pane, double-hung, window sash. Although the units are notably repetitious, the longest rows are along east-west streets that pass through the projects. Some units with wood siding and inset porches were placed in the centers of rows facing the north-south streets to accentuate the character and symmetry of the houses with respect to the garden spaces.

The public housing along North Patrick Street between Oronoco and Pendleton Streets is very different in style and character from the units just north of it. The units, which are in the 900 block of North Patrick Street, were constructed with three or four units clustered together back-to-back so that they form four-unit symmetrical and cubic buildings with hipped roofs. They have stuccoed walls and are detailed to resemble Prairie-style houses. Known as Ramsey Houses, this area of public housing was constructed in 1942.

The third group of public housing is a large complex with no streets passing through it, built in 1988 and known as Jefferson Village. These units are constructed of brick, but the brick is a deep fray color and the units are detailed with late Modern Movement-style features, such as mill-finished aluminum hopper windows, round-arched transoms in mill-finished aluminum, and white glass globe lights hanging just over each entrance doorway. The Jefferson Village units consist of two types, row houses that step back and forth as the form rows, and apartment flats arranged in three-story buildings with center entrances and stairs so that there are three units on each side of each stairway, one for each floor. The apartment buildings are located at the

southern edge of Jefferson Village, where it backs up to the Jefferson-Houston School site, while the row houses nearly all face onto Princess, North West, or North Earle Streets.

***Integrity: Visually Intrusive Buildings from the 1960s, 1970s, etc.***

In general, the highway-oriented buildings from the 1950s were the last architectural trend to impact the district within the period of significance. In the 1960s, very few buildings were constructed that are still evident in the district. By the 1970s and 1980s, however, the district was postured to begin an extended period of growth, and several different waves of architectural fashion affected it in a short period of time. The first of these included the construction of a number of late-Modern Movement buildings that are visually intrusive. Some examples include: the Old Town Veterinary Clinic building at 423-425 North Henry Street; the Jefferson-Houston School building built in 1970 at the corner of Cameron and North West Streets; the Jefferson Village public housing complex built in 1988 along Princess Street between North West Street and North Earle Street; the Hopkins House building built in 1975 at 1224 Princess Street; an office building at 403 North Henry Street; and a modern commercial building built in 1977-1979 at 214 North Fayette Street. Remodeling projects between 1980 and 2000 had a similar effect on a large portion of the commercial buildings, including a large percentage of the highway-oriented businesses in the North Henry Street corridor, making them more visually intrusive than they were originally. Examples include: the building at 701 North Henry Street; the Esmeralda's Restaurant building at 728 North Henry Street; the United House of Prayer for All People Church at 324 North Henry Street (formerly a convenience store); the Community Presbyterian Church at 1122 Oronoco Street; the commercial building at 1108 Oronoco Street; the filling station at 434 North Henry Street; and the community center building recently converted from an auto repair garage at 413-415 North Alfred Street (at the former site of Hallowell School, a historically-significant African American school demolished before the present building was built).

The second wave of new buildings to appear in the 1970s and 1980s consist of buildings that clearly attempt to copy or derive inspiration from Alexandria's historic architectural styles. These include a few houses in the flounder house form (with a shed roof shedding to the side, as was often the case when the rear wing of a house was built before the owners could afford to build the more formal front rooms; some historic flounder houses survive in the Alexandria Historic District, east and south of the current nominated area). Examples also include variations on, and modern interpretations of false mansards, Queen Anne-style bay windows, gabled attic dormers, and other details. The details are caricatured in a creative way, sometimes with humorous results. In two or three locations, for instance, an oversized mansard form is used in the top story of a new house, designed with sloped glass separated by mullions that resemble, at first glance, the seams in a standing-seam roof, although in reality the design is actually more of a top-story greenhouse. One of the largest quasi-historic buildings to be built in the 1980s was the office building and parking garage built in 1983, filling most of the city block between Cameron and King Streets in the 100 blocks of Henry and Fayette Streets.

***Historic-Style Infill Houses***

By the late 1980s, in a third wave of construction, the design of new buildings in the district began to be more sophisticated, most often copying historic styles in a stricter way. This is largely attributable to the passage of an ordinance protecting most of the nominated area as a city historic district in 1984. Since the 1980s, many historic houses have been restored to remove non-historic remodeling materials, and many new houses have been built between existing ones. The end result is that it is very frequently difficult to tell the recent authentic restorations of pre-existing houses from the new houses copying historic styles found intermixed with them. On the other hand, the attention to maintaining the historic appearance of the district has resulted in less intrusive development and more preservation of authentic historic resources than would have happened had the city ordinance not been there.

***Integrity Still in a State of Flux***

Although growth within the district has accelerated in the last few years, most of the proposed district's historic resources are protected by city ordinance. One of the most visually intrusive Modern Movement buildings in the district has been removed during the preparation of this nomination. The Charles Houston Recreation Center, built in 1976 on the former site of the

**Section 7 Page 14**

=====

Parker-Gray Elementary School, was demolished in 2007 to make way for a new building. Several large new buildings that are visually intrusive have been built within the district's boundaries in the last few years. These include a large apartment building currently under construction in the 500 block of North Henry Street and another under construction in the 1100 block of Cameron Street, as well as several new developments near the northwestern corner of the district. In spite of all these changes, however, a large portion of the core area of the district retains integrity and most of the brick row houses that occupy the outermost blocks of the nominated area have remained almost unchanged since they were built.

<sup>1</sup> The dates 1863 and 1877 are used in various places in the text in reference to information that can be seen or derived from the 1863 Bird's-Eye View Panoramic Drawing of the city and the 1877 Hopkins Atlas.

<sup>2</sup> The owners of the largest houses and largest tracts of land are shown on the 1877 Hopkins Atlas.

<sup>3</sup> Construction of the house was originally started by John Potts, a prominent local merchant, in 1800. In 1803, Potts sold the unfinished house to Jonathan Swift who served many years as president of Alexandria's City Council. In 1824, upon Swift's death, the house was sold to Thomas Mason who entertained many guests there when he was mayor of Alexandria. Lumber merchant William A. Smoot, who was also mayor of Alexandria, lived in the house with his family from 1885 to 1917. It was sold to William Hoge, another local lumberman, who made the property into an industrial facility. In 1927, the house was dismantled and moved to Princeton, New Jersey.

<sup>4</sup> These small houses are shown as small rectangles on the on the 1877 Hopkins Atlas.

<sup>5</sup> The row houses are visible in the 1863 Bird's-Eye View Panoramic Drawing of the city.

<sup>6</sup> The dates for the two halves of the building are given on the 1958 Sanborn map. The two halves are of almost identical design, each covering half of the city block, and each being "U" shaped, with an open courtyard toward North Payne Street accessing loading docks.

<sup>7</sup> The uses of the building are indicated on the 1958 Sanborn Map.

<sup>8</sup> The terms "covelap" and "German siding" are used interchangeably in the text. Although it is not known if the siding is generally tongue-and-groove or lapped, it conforms to the covelap model, with a convex cove at the top and a wide vertical band beneath it. This type of siding is sometimes called "novelty siding" or "drop siding," or in the planing mill trade, "106 siding."

<sup>9</sup> A hurricane did serious damage to Third Baptist in either 1895 or 1896. Historical documents conflict on the year and how much damage was done. Although early reports on the damage indicate that the building was destroyed, the difference in construction style from the body of the church to the narthex suggests that some of the earlier walls remained standing. The narthex part of the building is clearly constructed using materials, massing, and style elements that were popular in the mid-1890s associated with the Richardsonian Romanesque Revival.

<sup>10</sup> The westernmost street, Buchanan Street, follows the curved course of railroad tracks now shared by the D.C. Metro (subway) system. About 1980, the tracks were raised on an earthen mound, and the brick row houses that had been on the western side of Buchanan Street were removed in the process. The artificial mound provides a crisp western boundary for the southern one-third of the district. The Rosemont Historic District [NR 1992] lies just across the tracks, but the district lines are not parallel: only a small section of the Rosemont Historic District boundary is close to the tracks.

<sup>11</sup> See Sanborn Insurance map for 1958.

<sup>12</sup> See Sanborn Insurance map for 1941.

<sup>13</sup> See Sanborn Insurance map for 1941.

<sup>14</sup> See Sanborn Insurance map for 1941.

## INVENTORY OF RESOURCES

The Inventory below represents all the resources identified within the district boundary, based on a survey conducted between August 2006 and February 2007 (with minor corrections through March 2009). Resources are identified by numbers assigned in the survey that correspond to survey forms compiled for the Virginia Department of Historic Resources. The survey forms are on file at the department's office in Richmond. The resources are also listed by address and are shown as either contributing or non-contributing. Streets are shown in alphabetical order (almost half of the streets have a "North" prefix, which is shown following the street name for purposes of maintaining alphabetical order).

In counting the resources, houses and other buildings that occur in rows were counted individually. This includes both the rows of adjoining buildings that were aggregated over time and those where the row as a whole was designed and constructed at one time. In some cases, the houses were designed with identical façades that repeat one next to another, often appearing as mirror images of one another; in other cases, by contrast, the original design clearly emphasized the unity of the entire row. In many examples, differing façade designs were used at end locations and/or at center addresses to emphasize the row as a whole through symmetry while varying the design between neighboring houses. In the older sections of the district, there are many examples of repeated house designs where two or more facades that originally matched have evolved through remodeling campaigns so that they no longer appear the same. These were counted separately, as was also the case with those houses where matching facades have remained intact (where two or more adjoining addresses have always displayed matching designs). A large number of row houses in the district were built at various times as part of public housing projects and continue to be owned by public agencies that maintain entire rows with matching materials. Nearly all the public housing in the district consists of side-by-side row houses rather than apartment buildings (units above or below one another); the public housing row houses were counted consistently with other row houses, following the written guidance provided in *National Register Bulletin 16A*. A large number of the repeated designs also appear as semi-detached row houses, where two adjoining addresses were designed with a pair of matching façades, frequently as part of a longer row or larger development where narrow spaces were left between every two pairs. In most cases, the houses are owned by separate owners and occupy separate parcels of land. To be consistent, in all rows of two or more addresses, where there are separate entrances and evidence of vertical dividing walls, the houses were counted individually.

The district also contains a large number of non-contributing resources that were constructed recently, designed as accurate copies of typical house types found historically in the district. In many cases, these were constructed to fill gaps where older buildings had been demolished. In these cases, the design sometimes re-creates the appearance, or presumed appearance, of the house that was lost. Many other contributing resources, where the original house is still in place, have been thoroughly remodeled and have only new materials in their facades. In some cases, where the design is based on that of the adjoining address, the new in-fill building appears to be the more intact historic resource, when in fact, it is the reproduction. At the same time, buildings built at the end of the period of significance are often so simple in design that they are in sharp contrast with the older resources and new in-fill buildings next to them. This is especially true where the newly built house is an accurate copy of an older building. For these reasons, it was not possible to distinguish contributing resources from non-contributing ones solely based on field observations, and information gathered from city records and maps was critical in distinguishing between the contributing resources and the non-contributing ones.

All outbuildings known to be permanently installed were counted in the inventory, but those that did not appear to be permanently installed and could not be photographed or evaluated for contributing status were not counted. Because of the availability of satellite imagery and other mapping data, the survey team was aware of a few examples that appear to qualify as outbuildings but are located behind privacy fences or in other inaccessible locations, and these were not counted when the nature, appearance, and contributing status of the resource could not be determined.

**Alfred Street North**

**315 Alfred Street North 100-0133-0001**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1880**

November 2006: This Colonial Revival style frame house is clad in aluminum siding (the design is that of an Italianate style frame townhouse with Colonial Revival style decorative details added in the mid-twentieth century). The foundation is not visible. The windows are 2/2 double-hung horizontal wood sashes except for the large first story window opening where the center light of a tripartite picture window is a large, fixed pane of glass (flanking it are narrow double-hung 2/2 horizontal pane window units). Framing the entrance door is a broken pediment door surround and the door is accessed by a small a brick stoop. The materials of the roof surface are not adequately visible, but the roof appears to be a shared form with that of 317 North Alfred Street. The edge of the roof forms an overhanging wood cornice at the top of the façade (the shared roof form appears to be a clipped gable behind this cornice, creating a composition that is part false front while resembling an overhanging hipped roof at the center of the two houses, where they meet).

*Individual Resource Status:* Single Dwelling      Contributing      *Total:* 1

**317 Alfred Street North 100-0133-0002**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This Italianate style frame house is clad in aluminum siding (the design is that of an Italianate style frame townhouse, while the remodeling materials that make up most of the visible characteristics of the façade date from the mid-twentieth century and are similar to the Colonial Revival style details found on 315 N. Alfred Street; however, the later materials, in this case, do not completely conceal the Italianate style character of the façade). The foundation has been parged with concrete. The windows are 6/6 double-hung wood sashes. The materials of the roof surface are not adequately visible, but the roof appears to be a shared form with that of 315 North Alfred Street. The edge of the roof forms an overhanging wood cornice at the top of the façade (the shared roof form appears to be a clipped gable behind this cornice, creating a composition that is part false front while resembling an overhanging hipped roof at the center of the two houses, where they meet). There is a wood cornice and a metal grate on the door.

*Individual Resource Status:* Single Dwelling      Contributing      *Total:* 1

**319 Alfred Street North 100-0133-0003**

*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Colonial Revival, ca 1930**

November 2006: This two-and-a-half story, three-bay Colonial Revival style textured-brick house is two-and-a-half stories in height and has painted brick walls laid in American bond. Across the front is a 1-story, 1-bay porch with square brick columns on brick piers. Across the façade, the foundation is not visible, due to the location of the porch (in the side elevation, it is a raised basement with windows). The windows are 1/1 double hung vinyl replacements flanked by decorative shutters. The roof is a front-only mansard with asphalt shingles framed by a stepped parapet to each side. At the center of the mansard is a shed-roofed dormer with a pair of 6/6 wood sash windows. An interior end chimney rises from the houses north wall near the peak of the parapet. At the window lintels, a soldier brick band extends across the façade; the windows also have rowlock sills.

*Individual Resource Status:* Single Dwelling      Contributing      *Total:* 1

**326 Alfred Street North 100-0133-0004**

*Primary Resource Information:* **Church/Chapel, Stories 1.00, Style: Gothic Revival, 1912**

November 2006: This three-bay Gothic Revival style church has some details, such as knee braces, that are also reminiscent of the Stick style. The brick walls are laid in American bond and have buttresses that step in with sloped stone caps at the steps. The foundation is not visible. The windows are stained glass in fixed metal frames. The roof is a front gable with asphalt shingles. Over the entrance is a large gabled door hood, constructed of wood, with knee braces serving as corner brackets. The pointed arches over the window and door openings have drip moldings formed by a protruding curved sailor course over an arch of bricks where the voussoirs resemble a soldier course. There are two additions to the south of the building (occupying the parcel whose address is 322 North Alfred Street). The additions were designed to match the original building in material and details, although the proportions of the newer sections of the building are more horizontal. Reflecting the history of the additions, the cornerstone lists five significant dates for the church and congregation: 1869, 1873, 1908, 1955, and 1990. Written histories, however, date the original part of the current building, a Gothic Revival style chapel, to 1912.

**402 Alfred Street North 100-0133-0013**

*Primary Resource Information:* **Multiple dwelling, Stories 3.00, Style: No Style Listed, ca 1980**

November 2006: This three-story, four-bay, brick-face concrete block multiple dwelling is a ca.1980 modern era interpretation of the typical freestanding late nineteenth century townhouse in the district. It has a brick façade laid in stretcher bond. The foundation is raised, comprising a garage with two garage doors, and it is counted here as the first of three stories. At the top of the façade is a simplified false mansard form with a slate surface. The windows are double-hung 1/1 wood sashes with concealed lintels and rowlock sills. The windows are spaced unevenly, so that the space at the middle is wider than the other two spaces between bays, making the windows to each side of the center space seem almost like paired windows. The building is entered by way of a narrow, recessed bay added between the four-bay façade and the façade of the frame house at 404 North Alfred Street. The door is raised about three steps up from grade, in line with the entrance to 404 North Alfred Street, and it is accessed by an inconspicuous set of concrete steps. Behind this building is an in-ground swimming pool that is shared by it and the frame house at 404 North Alfred Street (it straddles the property line, but is counted with this primary resource).

*Individual Resource Status:* **Multiple dwelling** **Non-Contributing** *Total:* 1  
*Individual Resource Status:* **Pool/Swimming Pool** **Non-Contributing** *Total:* 1

**404 Alfred Street North 100-0133-0014**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two story, two-bay, Queen Anne style, frame, row house is clad in German siding. The house appears to have been built as a mirror-image twin to 406 North Alfred Street, to which it is attached at this house's north wall. The foundation is raised, constructed of brick laid in stretcher bond. The windows are 1/1 double-hung wood. The roof is a false mansard with a slate face, including some fish-scale slates. The façade is dominated by a two-story, semi-octagonal, projecting bay window with a slate-clad pyramidal roof. Below the mansard and pyramidal roof is a wood cornice with dentils. The entrance door has a stained glass transom and what appears to be an original five-panel Queen Anne style door behind a storm door. The entry is accessed by a four-step cast iron stoop, although there are no other decorative details beyond a very thin mitered surround around the door. Behind this building is a shed and an in-ground swimming pool. The shed was constructed after the 1992 Sanborn map was prepared. The pool is shared by it and the brick multiple dwelling at 402 North Alfred Street (it straddles the property line); the pool is counted with 402 North Alfred Street rather than with this house.

*Individual Resource Status:* **Single Dwelling** **Contributing** *Total:* 1  
*Individual Resource Status:* **Shed** **Non-Contributing** *Total:* 1

**405 Alfred Street North 100-0133-0005**

*Primary Resource Information:* **Single Dwelling, Stories 3.00, Style: Colonial Revival, ca 1980**

November 2006: This three-story, three-bay, semi-detached, non-historic, Colonial Revival style house has brick walls laid in stretcher bond. The design is based on that of a row-house or townhouse of the late-twentieth/early-twenty-first century, in a historical revival style, a common house type in parts of the Alexandria area where there has been recent construction. The foundation is not visible and the front entrance (a two-leaf door and transom in a segmentally arched opening) are barely visible, due to thick shrubbery across the front. The windows are 1/1 double-hung wood. The roof is a side gable with asphalt shingles. At each window opening, there is a segmental arch and a rowlock sill. Across the top of the façade is a saw-tooth brick cornice. A garage at ground level occupies most of what is counted here as the first story.

*Individual Resource Status:* **Single Dwelling** **Non-Contributing** *Total:* 1

**406 Alfred Street North 100-0133-0015**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two story, two-bay, Queen Anne style, frame, row house is clad in PermaStone. The house appears to have been built as a mirror-image twin to 404 North Alfred Street, to which it is attached at this house's south wall. The foundation is raised, constructed of brick laid in stretcher bond. The windows are 1/1 double-hung wood. The roof is a false mansard with a slate face, including some fish-scale slates. The façade is dominated by a two-story, semi-octagonal, projecting bay window with a slate-clad pyramidal roof. Below the mansard and pyramidal roof is a wood cornice with dentils. The entrance door has a wood surround with dentils, but the surround is largely obscured by a concave metal slat awning. The entry is accessed by a four-step concrete stoop with a wrought metal railing to each side.

*Primary Resource Information: Single Dwelling, Stories 3.00, Style: Queen Anne, ca 1980*

November 2006: This three-story, three-bay, semi-detached, non-historic, Colonial Revival style house has brick walls laid in stretcher bond. The design is based on that of a row-house or townhouse of the late-twentieth/early-twenty-first century, in a historical revival style, a common house type in parts of the Alexandria area where there has been recent construction. The foundation is not visible. The front entrance is a two-leaf door with a transom. The windows are 1/1 double-hung wood with decorative louvered shutters. The roof is a side gable with asphalt shingles. At the top of each window opening and the door opening at the entrance, there is a flared jack-arch of radial brick, in a slightly darker color from the remaining façade brick, serving as (or concealing) the lintel. Across the top of the façade is a simple wood cornice. A garage at ground level with a segmentally arched garage door opening occupies most of what is counted here as the first story. The 1992 Sanborn Fire Insurance maps indicate that the actual structural system of this house is concrete block with a facing of brick.

*Individual Resource Status: Single Dwelling Non-Contributing Total: 1*

**408 Alfred Street North 100-0133-0016**

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Italianate, ca 1890*

November 2006: This two-story, two-bay, Queen Anne style frame town house is clad in aluminum siding. The dominant feature of the façade is a two-story projecting bay with a pyramidal roof clad in pressed metal shingles. The rest of the roof is a false mansard with pressed metal shingles supported by a wood cornice with dentils. The foundation is brick, laid in stretcher bond and raised enough to have a small basement window in the façade. Across the façade is a one-story, one-bay porch with square brick piers serving as posts (it may be brick encasing an earlier wood post). The porch has a new-looking brick floor and four brick steps. Above the brick piers, the upper portion of the porch has typical Queen Anne details in wood, including a line of turned wood spindles at the edge of the roof with a dentiled cornice and end brackets. The windows are fixed casements with 20 lights each, except in the bay above the door and next to this in the side of the projecting bay, where there are 6/6 units.

*Individual Resource Status: Single Dwelling Contributing Total: 1*

**410 Alfred Street North 100-0133-0017**

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1900*

November 2006: This two-story, three-bay, Colonial Revival style brick house has brick walls laid in American bond with Flemish bond (headers and stretchers) at the bond course of the facade. The foundation is raised, part of the same brick walls and in the same plane as above. The windows are double-hung 1/1 wood sashes with stone lug sills and tall stone lug lintels. The roof is a shed roof. At the top of the façade is a brick cornice of at least eight courses with a very thin wood cornice as its top line. There is a transom over the door with the house number painted on the glass. The door is accessed by a stone and brick stoop with four large stone steps. There is a wrought iron railing to each side of the steps. Flower boxes have been attached at the first story lintel sills. Flanking the entrance door are two Colonial Revival coach lantern style light fixtures.

*Individual Resource Status: Single Dwelling Contributing Total: 1*

*Individual Resource Status: Shed Non-Contributing Total: 1*

**412 Alfred Street North 100-0133-0018**

*Primary Resource Information: Multiple dwelling, Stories 2.00, Style: Mission/Spanish Colonial Revival, ca 1970*

November 2006: This two-story, nine-bay, Modern-era, Mission-style multiple dwelling is clad in stucco, beneath which is a concrete block structure according to the Sanborn maps. The foundation is treated as a thicker section of the exterior walls at the base of the façade and other elevations. The windows are double-hung 1/1 wood sashes with concrete slip sills. They appear in single bays at the outer corners of the building and in banks of three bays close together near the building's center, and in both cases, they are unusually tall, narrow sashes in openings that nearly touch those of the story immediately above or below. The roof is hipped at a low pitch so that the roofing material is not visible. Wide eaves are found on all four sides of the building. Although the overall form is that of a large cube, the building is actually shaped like a capital letter "H," with a deep recess at the entrance bay at the center of both the façade and the rear elevation. The roof continues over the deep recess, except for a cut-away area that allows light to flow into the recess. There is a small hipped projection, like a low cupola, at the center of the main roof. The building was built after the 1958 Sanborn map was prepared, and it was in place in time to appear on the 1992 Sanborn map. The building sits back from the street about 12-15 feet, behind a metal fence. The front lawn contains a few small shrubs and some larger ornamental plants in planters. There are also two medium-sized ornamental trees, and there is a street tree in front of the building.

**415 Alfred Street North 100-0133-0007**

*Primary Resource Information: Meeting/Fellowship Hall, Stories 1.00, Style: Commercial Style, ca 1980*

November 2006: This one-story, ten-bay community center building with a U-shaped floor plan was constructed by rebuilding and adding onto an auto-repair garage, the north wing of the current building, which had been built near the end of the period of significance. Like most auto-repair facilities and commercial buildings from the 1950s in the district, it is a one-story, cubic building with brick walls and a flat roof concealed by a parapet. The brick walls are laid in stretcher bond, consistent with the notation on the 1992 Sanborn map, which indicates that the actual structural system is concrete block with a brick facing. The Sanborn map also indicates that it was constructed with a reinforced concrete floor slab, unprotected steel columns and roof framing, and that the roof material is incombustible. The foundation is not visible, but the building was apparently built as slab-on-grade construction. Although part of the former auto-repair garage building was constructed in 1954, as per the Sanborn map, and another section was built in 1963, the 10-bay façade of the building was completely redesigned about 1980 with painted brick, fixed-pane-mill-finished-aluminum-framed casement windows, and a central gate in a segmental brick arch leading into a small central front courtyard. The gate is made of parallel and closely spaced vertical steel rods that follow the shape of the arch. The north wing of the building (the oldest part of the current footprint) is four-bays wide and has an inset brick panel at the cornice. The south bay is five bays wide. The windows have soldier brick lintels and there is a short wood cornice at the top line of the parapet. In a narrow unpaved strip across the front of the building is a row of small hedges, and there are four street trees across the front of the parcel.

*Individual Resource Status: Meeting/Fellowship Hall Non-Contributing Total: 1*

**417 Alfred Street North 100-0133-0008**

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Italianate, ca 1880*

November 2006: This two-story, three-bay, semi-attached, Italianate style frame house is clad in composition siding. The foundation is solid, constructed of brick laid in stretcher bond. The façade windows are all double-hung wood sashes in a large, two-story, semi-hexagonal bay window that occupies almost the entire façade, with an 8/8 pane pattern in the center facet, and 6/6 in the side facets. (The three facets of the bay window have been counted as three separate bays for the purposes of this description.) At the top of the façade is a wood cornice with a decorative, tilted, perforated frieze between end brackets, serving as the top edge of the shed roof. The frieze shows a Queen Anne influence on an otherwise Italianate town house form. The perforation pattern is designed to look like a row of starbursts or flowers. There is no front entrance. Either the entrance has been moved to the side or rear, or the house has become a wing of 419 North Alfred Street, which appears to have been originally built as a matching, semi-attached twin townhouse. The attached house at 419 North Alfred Street is painted in matching colors but has a completely different fenestration pattern.

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Italianate, ca 1880*

November 2006: This two-story, two-bay, semi-attached, Italianate style frame house is clad in composition siding. The foundation is solid, constructed of brick laid in stretcher bond. The second story windows are double-hung 6/6 wood sashes. The first story windows are double-hung 9/9 wood sashes in a semi-hexagonal bay window that occupies the area to the north side of the entrance bay. The bay window has a hipped roof and a dentiled cornice. At the top of the façade is a wood cornice with a decorative, tilted, perforated frieze between end brackets, serving as the top edge of the shed roof. The frieze shows a Queen Anne influence on an otherwise Italianate town house form. The perforation pattern is designed to look like a row of starbursts or flowers. There front entrance is a paneled door with a very simple surround consisting of a thin strip of mitered wood. The door is accessed by a single step in place of a porch or stoop. The house at 419 North Alfred Street is attached to the house at 417 North Alfred Street. Both are painted in matching colors, and have matching rooflines and cornices, but 419 North Alfred Street has a completely different fenestration pattern from 417 North Alfred Street.

November 2006: This two-story, two bay, semi-attached, side-gabled, Federal-era, frame house is clad in weatherboard. The foundation is not visible. The windows are double-hung 2/2 wood sashes. The side-gable roof has standing seam metal roofing, and there is an interior end chimney in the front face of the roof. At the top of the façade is a very simple wood cornice with brackets. There are shutters on hinges at all the window openings, and there is a transom over the door. The door is accessed by two simple steps in place of a stoop. There is a hip-roofed porch at the side elevation. There is a street tree in front of the house.

November 2006: This two-story, two-bay, semi-attached, frame, Italianate style town house is clad in German siding. The façade is dominated by a two-story, semi-hexagonal bay window. The foundation is solid, constructed of brick laid in stretcher bond. The windows are double-hung 2/2 wood sashes except in the side facets of the bay window where they are 1/1. The roof is a slate-clad false mansard supported on a wood cornice with brackets and dentils. The false mansard and cornice follow the outline of the bay window. Over the door is a transom sheltered by a small hood on brackets, and the door is accessed by a brick stoop.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Vernacular, ca 2000**

November 2006: This recent constructed, two-and-a-half story, two-bay, front-gabled, frame townhouse, clad in composition siding, was designed with elements derived from late nineteenth century vernacular architecture. The foundation is solid, constructed of brick laid in stretcher bond. At the house's southeast corner is a two-story inset porch, one bay in width, with a square column at the corner. At the lower level, the porch is accessed by two wooden steps that come up from the brick sidewalk. The windows are double-hung 2/2 vinyl sashes. Centered in the pedimented, street-facing gable end is a 2/2 attic window. There is a shed-roofed dormer with paired one-light awning windows on the north face of the roof. The roof is clad in standing seam metal. The entrance is in a side elevation, and thus is not immediately apparent from the street.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: When the fieldwork was conducted for this survey, this two-story, three-bay, freestanding, Italianate style, shed-roofed, frame house was clad in Permastone; however, a short time later, when it was photographed, the Permastone had been removed and a new layer of composition siding had been installed on the bottom half of the facade. The foundation was not visible at the time of the original fieldwork, but a layer of new brick in stretcher bond has subsequently been laid in front of it. The windows are double-hung 1/1 wood sashes installed with the new siding (replacing ca.1960 2/2 sashes with horizontal panes observed in the earlier fieldwork). At the top of the façade is a false mansard roof with what appears to be slate that has been painted over in the face of the mansard. Below the mansard is a wood cornice with dentils and brackets. There is a transom over the door, and the door is accessed by a new, two-step brick stoop. At the time of the initial fieldwork, there was plastic sheeting on the side elevation, but that area now has siding that matches that of the facade.

November 2006: This two-story, two-bay, freestanding, side-gabled, frame townhouse is clad in vinyl siding. The foundation is solid, constructed of masonry that has been parged with concrete. The windows are double-hung 2/2 wood sashes with horizontal panes. The roof is clad in asphalt shingles and there is a central interior chimney which, like the foundation, has been parged with concrete. There is a transom over the door at the otherwise plain entrance. The door is accessed by a three-step concrete and brick stoop with a pipe railing to each side. The storm door at the entrance has jalousies, and the window openings all have decorative louvered shutters.

**500 Alfred Street North      100-0133-0036**

*Primary Resource Information:* **Commercial Building, Stories 2.50, Style: Colonial Revival, ca 1990**

November 2006: This two-and-a-half story, three-bay Colonial Revival style row house (in use as an office building) is part of a staggered row of relatively recent houses that face North Alfred Street and its intersection with Oronoco Street, although the adjoining houses that comprise the rest of the row face into a courtyard and turn their backs to North Alfred Street. The building has a raised foundation and brick walls laid in stretcher bond. The windows are double-hung 1/1 wood sashes. The roof is a front gable with asphalt shingles, and there is no visible chimney. A gabled dormer in the east face of the roof faces North Alfred Street. The house's other features include flared stone lintels, rock-faced stone sills, and a brick planter at the foundation (a low retaining wall at the sidewalk, about three feet from the building, with space between filled with soil and containing small trees and shrubs; the planter blocks all view of the foundation). There is a round window in the gable end and an elliptical arched fan light above the door in the inset entry.

November 2006: This two-story, two-bay, frame, Italianate style row house is clad in composition siding. The house appears to have been built to face Oronoco Street, but it has been re-oriented to have a North Alfred Street address and there is now no entrance on the Oronoco Street side. The foundation is not visible. The windows are double-hung 6/6 wood sashes with decorative shutters. The roof is a false mansard with asphalt shingles supported on a wood cornice with brackets. The false mansard faces Oronoco Street, apparently marking the top of the original façade. There is an interior end chimney and an exterior end chimney. The party wall separating this house from the adjoining frame house on Oronoco Street is apparently constructed of brick, and a small portion of it is visible at the roofline. The entrance door on the North Alfred Street side has a transom and a hood with brackets. Also on the North Alfred Street side, at the north end of the house, there is two-story, three-bay porch extension and a two-story two bay garage.

*Primary Resource Information:* **Church/Chapel, Stories 1.00, Style: Colonial Revival, ca 1952**

November 2006: This one-story, five-bay, front-gabled Colonial Revival style church has brick walls laid in American bond and a pedimented, three-bay front porch with monumental square wood columns. The porch has concrete steps and a concrete floor on a brick base. The porch columns are arranged in three bays, the center bay being slightly wider than the flanking bays. The pediment is a plain triangle formed by the eaves of the porch's front-gable roof and a bottom chord above the frieze of the top of the columns. The tympanum is a flat surface, apparently constructed of plywood, with a small half-circle louvered vent at the center. Across the frieze, black letters spell out the name of the church: "RUSSELL TEMPLE C.M.E. CHURCH." At the base of the columns, a set of monumental stairs the width of the three-bay porch rises about ten risers to the porch floor. The entrance is a pair of doors in a single opening at the center bay. The stairs have pipe railings at each side of each bay, and similar pipe railings are found at the ends of the porch. The windows are double-hung 1/1 wood sashes with stained glass divided by casing. The main roof is a side gable with asphalt shingles and cornice returns. There is an interior end chimney, and next to it, a large metal flue is mounted to the south wall of the church. The side elevations are divided into bays by brick pilasters. The church sits back from the street about 35 feet and has setbacks of 20-40 feet on all four sides. The surrounding area is lawn, enclosed by a metal fence. Several trees and a few small shrubs are found within the lawn. There is also a street tree in front of the building.

November 2006: This two-story, two-bay, freestanding, frame, Italianate style townhouse matches the long row of narrow row houses that begins just north of it. Like the other houses in the row, it has a two-story bay window that occupies more than half of the façade. The exterior wall treatment is German siding. The foundation is solid, consisting of brick walls laid in stretcher bond. The windows are double-hung 2/2 wood sashes. At the top of the façade, forming the uppermost edge of the shed roof, is a wood cornice with brackets and dentils. The entrance door has a transom, and in place of a stoop, it is accessed by steps with no handrail. In the south elevation, there is a large exterior end brick chimney with a brick shoulder just below the second story floor line. Long, narrow side yards along the north and south sides of the house are enclosed with wood privacy fences. One or two small shrubs are visible beyond the fences.

November 2006: This two-and-a-half story, three-bay Italianate style frame house has weatherboard siding. The windows are 2/2 double-hung wood. The roof is a front-only mansard, a full story in height, clad with standing seam metal roofing. The house has new trim, and the mansard appears to have been added recently to create a third story of living space. There is also a new addition to the rear. Both the wood cornice and the door hood over the transom have brackets and dentils. In the mansard is a triangular dormer with eight lights of glass that appears to be tinted, mostly diamond-shaped panes with some triangular ones. Serving as a front porch across the front of the house is an uncovered patio with a wood balustrade anchored by a series of wood posts. The patio has a wood floor on a brick base. The brick base is at the inner edge of the sidewalk and has brick laid in American bond with brick ventilators made from un-mortared soldier bricks.

**518 Alfred Street North 100-0133-0043**

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1850*

November 2006: This two-story, three-bay Greek Revival style frame house is clad in German siding. The foundation is solid and has been parged with concrete. The roof is a side gable with standing seam metal roofing. The windows are 6/6 double-hung wood. There is a transom over the door, and the door is accessed by a small concrete stoop. The window and door openings have minimal trim, as one finds in very early frame houses, and the roof has little or no overhang along the front or gabled sides. Although the windows and door are evenly spaced with respect to one another, the façade is asymmetrical as a result of the door (and consequently the windows) being off-center. The rear slope of the side-gable form is also different from the front slope: the rear slope is much steeper, has a large shed-roofed dormer, and slopes down to join a one-story rear addition, in a classic example of a Virginia "catslide" roof form.

November 2006: This two-story, two-bay, Italianate style frame house has German siding. The foundation is not visible. The windows are 1/1 double-hung wood. At the top of the façade, forming the uppermost edge of the shed roof, is a wood cornice with brackets and dentils. The windows are double-hung wood 1/1 sashes. The entrance door has a transom and a surround that includes a door hood with brackets and dentils. The door is accessed by a set of four brick steps. The house is the corner address of a row of ten contiguous frame row houses. Although it appears to be contemporary with the others, it is wider and is the only one that does not have a two-story bay window. The side elevation faces Oronoco Street. Toward the center of the Oronoco Street elevation is a doorway with a similar surround, accessed by brick steps, which is sheltered by a large shed-roofed canopy on wood knee braces. The canopy has a standing seam metal roof.

parapet, and there is an interior end chimney. The foundation is raised and the exterior brick walls are laid in American bond. The Sanborn Fire Insurance maps indicate that it was constructed of concrete block over which the brick is a facing. At the tops of the second story window openings is a wide wood cornice on three sides of the house which conceals the window lintels and defines the bottom edge of the parapet. The windows are 6/6 double-hung wood with rowlock sills and decorative shutters. At the entrance door is a pedimented surround with fluted pilasters.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1920**

November 2006: This two-story, two-bay, masonry row house is covered with stucco and has few stylistic details, but it is part of a row that has attributes of the Colonial Revival style and resembles other Colonial Revival style row houses built in Alexandria in the first half of the twentieth century. It is the southernmost of ten houses in the row. The foundation is not visible. At the top of the façade is an aluminum-capped parapet concealing a shed roof with no visible chimney. Across the first story of the façade is a one-story, five-bay enclosed porch with an asphalt-shingled shed roof and an enclosure composed both of wood scored to resemble barn siding and 1/1 aluminum windows. The second story windows are double-hung 6/6 wood sashes.

November 2006: This one-story, two-bay, side-gabled, Colonial Revival style ranch type brick house has walls laid in American bond. The windows are double-hung 6/6 wood sashes. The roof is a side gable with asphalt shingles. A small brick interior end chimney rises from the center of the south gable end. This window and door openings have soldier course brick lintels, and the windows have rowlock sills. In place of attic windows, there are vents in the gable ends. Across the front of the house is a concrete patio three risers up from the walkway leading to the house. A wrought iron railing surrounds it. The house sits back from the street about 15 feet, and it is also set back about 15 feet on the south side along Pendleton Street. The area around it is mostly lawn enclosed by a chain link fence.

November 2006: This two-story, two bay, Colonial Revival style house has brick walls laid in American bond. The foundation is raised, part of the same American bond brick walls as above. The windows are one-light aluminum casements. The roof is flat, concealed by a parapet with an aluminum cap, and there is a stove flue in place of a chimney. There are metal awnings sheltering all openings, and the first story window opening is flanked by decorative shutters made of vertical wood boards with two cross bars. All the window openings have rowlock sills. The entrance is accessed by a five-step concrete stoop. There is a wrought iron railing to each aside at the top landing of the stoop, but there are no railings at the steps. The house sits back about 25 feet in a lawn surrounded by chain link fencing with a few small shrubs at the edge of the foundation.

November 2006: This two-story, two-bay row house is constructed of concrete block with some Colonial Revival style attributes. The foundation is not visible. The concrete block construction has been covered with a flat stucco finish. The roof is flat, concealed behind a stepped parapet, and there is no visible chimney. Across the façade is a one-story, two-bay shed-roofed porch with asphalt shingle roofing, square wood posts, and a simple railing with square pickets. In each story, the windows consist of a pair of double-hung 1/1 wood sashes beneath a shared cast-concrete lintel.

November 2006: This one-and-a-half story, three-bay, Bungalow/Craftsman style frame house has a hipped roof with a gabled dormer, a three-bay, shed-roofed, recently enclosed porch across the front, and German siding. The foundation is parged concrete. The porch enclosure includes screens and a solid plywood balustrade, as well as clear plastic panels in the porch roof creating a skylight effect in the part of the porch that projects forward from the house's main roof. The windows are 1/1 double-hung vinyl with decorative shutters. The hipped roof has asphalt shingles and an interior end chimney. The gable dormer has a four-light awning window and exposed rafter ends.

**638 Alfred Street North      100-0133-0078**  
*Primary Resource Information:* **Robert Robinson Library Building, Stories 1.00, Style: Colonial Revival, ca 1940**

November 2006: This one-story, five-bay, side-gabled, Colonial Revival style library building was built in 1940 as a library for African American citizens in the segregation era. One of the most important buildings in this district, its architectural simplicity is part of its significance as a historic resource. It has brick walls laid in American bond and very narrow (almost undersized) 8-light casement windows with rowlock sills. The foundation is not visible. A bold wood cornice, little more than a tall fascia board with a crown molding profile applied at its upper edge, wraps around the façade. The cornice serves to conceal the window lintels. The center bay of the façade, containing the entrance door, projects slightly, about 4 inches from the remaining façade plain. The single-leaf entrance door has a transom, but the opening has been enclosed with wood. As it does at the window lintels, the cornice conceals the lintel of the doorway opening at the top of the transom. The remaining portion of the projecting bay, sixteen inches to either side of the door, reads alternatively as a pair of plain brick pilasters connected by the cornice. The door itself (excluding the transom) has a mitered architrave door surround, essentially a six-inch-wide brick molding covering the edge of the jamb and serving as the intermediate element between the door leaf and the piers. The roof has standing seam metal roofing, and there is no visible chimney. The main entrance doorway is no longer used. This is a consequence of a large museum addition with an accessible entrance having been attached at the rear of the original library building (after the library closed, the building became the Alexandria Black History Center). The addition is brick. With the addition, the composite design is shaped like a

capital "T" in plan, with a center section containing the entrance, a doorway in its own gabled portico which faces Wythe Street. The ridge of the center section's gable roof runs east-west, connecting the original north-south gable roof of the library building to the parallel gable roof of the largest part of the addition. The building sits back from North Alfred Street 15-20 feet, and there is a smaller setback on the Wythe Street side. The setback areas are planted in grass with mature evergreen shrubs planted as foundation plantings at the edges of the original library building.

November 2006: This four-bay, front-gabled Colonial Revival style church building has brick walls laid in American bond. The gabled form began as a symmetrical three-bay building, circa 1948, according to the cornerstone when the church was "rebuilt." It is believed that a 1926 church previously existed on the site. A fourth bay with a nearly flat shed roof was added along the north side of the building in 1984. Fenestration includes double-hung-sash wood windows with stained glass glazing. There are two panes in each lower sash and the upper sash is divided by curved wood muntins into a pointed arch over which two half-pointed arches are superimposed for a total of seven panes of glass. The roof has asphalt shingles, and there is a deep molded cornice along each

edge of the roof, with small eave returns at the upper corners of the façade. The entrance is a centered doorway in the façade with a pair of flush doors framed by wide wood moldings. Above the entrance is a nine-light round window with eight pie-slice lights encircling a small round light at the center. At the peak of the gable is a compact, two-stage belfry with louvered vents at the sides and a pyramidal roof, crowned with a copper sphere finial. The church is one of the more highly-developed examples of a Colonial Revival style building in the district.

November 2006: This two-story, two-bay Colonial Revival style house has textured-brick walls laid in American bond. The foundation is raised, a continuation of the same American bond brick walls as above. There is a one-story, three-bay, shed-roofed wood porch across the front, with square wood posts and enclosed with windows and siding. The porch is also sheltered by a metal awning that extends across its width. The entrance to the porch has been moved to the side elevation. A porch window next to the door also has a metal awning, as does the lone second story façade window and the windows of the house's side elevation. The windows are 6/1 double-hung wood with rowlock sills and cast concrete lintels. The roof is flat with a parapet and has no chimney. The brick walls include a decorative brick dentil cornice, brick quoins, and terra cotta coping at the parapet. This building is a twin with 1603 Boyle Street. This is one of twelve pairs of twinned houses built at the same time on the same design in the Boyle Street area and the 1600 block of Princess Street.

**1001 Cameron Street      100-0133-0213**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two-story, two-bay Queen Anne style brick house has walls laid in stretcher bond with a great variety of ornamental brick work characteristic of the 1880s and 1890s including some specially pressed brick with rosette patterns in the faces. The foundation is raised. It is the corner address of three houses in a row of the same (or nearly identical) design. A one-bay wide and one-bay deep turret projects from the façade wall with a pyramidal roof at the top. The pyramidal roof has been clad in asphalt shingles. This being the corner location, the turret is slightly larger and has a taller roof than those of the two adjoining houses to the north. The turret also projects from the side elevation along North Patrick Street approximately the same amount as it does along Cameron Street. The roof of the turret has pressed metal ornament at its crest and a decorative triangular form at its center resembling a triangular dormer (probably originally a louvered vent, but now boarded over). The main portion of the roof is concealed by an ornamental parapet with an ornamental corbelled brick cornice, except where the pyramidal turret roof described above rises above the cornice. The ornamental brick work includes stepped corners to resemble chamfers at the edges of the turret and a belt course of two projecting rows that connect the windows and doors about a foot from the top of each opening. The door and window openings all have stone lug sills and gauged brick segmental arches that have an inset wood panel under each arch to allow for rectangular sash. At the outer edge of each arch, beyond the gauged brick, decorative alternating projecting headers form a pattern that resembles a brick drip molding. The entrance is accessed by a four-step brick and stone stoop with a wrought iron railing. The door, which appears to be original, is two narrow leaves, with two panels in each leaf defined by applied moldings. The windows are a combination of double-hung 12/12 wood sashes in the turret and a wood Queen Anne window above the entrance. The first story turret window has a single-light wood transom sash above the upper 12-light sash. The Queen Anne window has a stained glass border in the upper sash and a stained glass divider line between two vertical panes in the lower sash. The entrance door also has a transom.

**1006 Cameron Street      100-0133-0221**  
*Primary Resource Information:* **Office/Office Building, Stories 2.50, Style: Queen Anne, ca 1890**

November 2006: This two-and-a-half story, four-bay, Queen Anne style office building may have originally been a house. Designed on a residential model, it is one of the only large late-nineteenth century buildings in the district built with a freestanding design that emphasizes its separateness from its neighbors. The design is actually a blend of a Queen Anne form and some surface details and other characteristics of the Richardsonian Romanesque, Shingle, and Prairie styles. The exterior walls begin at grade with a raised basement with rock-faced stone (or rock-faced cast stone concrete masonry units). A smooth stone belt course doubles as a lintel for the basement windows. Above this belt course, the rock-faced stone continues about two more feet to a slightly projecting watertable course that doubles as sills for the first story windows. Above this, the walls are brick laid in stretcher bond. The second story window sills and the lintels in both upper stories also extend across the façade as belt courses. At the building's northwest corner is a small one-story, one-bay porch with Tuscan columns facing Cameron Street. The porch is accessed by a set of about six concrete steps. The rock-faced stone below the second story window sill line continues across the porch as a balustrade. Above the porch is a wood railing with turned posts creating the effect of an open balcony. Next to the porch, on the primary elevation, is a three-sided projecting bay that rises from grade to the eaves. The windows are double-hung 1/1 wood sashes. The roof is hipped with a hipped roof dormer and asphalt shingles. This building also features wide eaves with knee-braces as supports at the building's corners at the base of the roof.

Section 7 Page 49

second. Over the door is a three-light transom. The window openings have original shutter hinges and shutter dogs, but the shutters are missing. The bay containing the entrance was added in after 1992, at which time it had been vacant (based on the Sanborn map of that year), although the records of the city's Board of Architectural Review indicate that alterations and additions were made to the house in 1986. At that time, or shortly afterward, this building and the one next to it (1009 Cameron Street) were connected and completely rehabilitated as an office complex. The two houses do not align perfectly, 1007 being slightly closer to the edge of the street. As a result of the office conversion project, all exterior materials were apparently replaced except for a few small details such as the shutter hardware.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1870**

November 2006: This two-story, three-bay, side gabled, Colonial Revival style frame house has weatherboard siding. The roof has wood shingles. At the top of the façade is a modest wood cornice with dentils. The foundation is solid, with brick laid in stretcher bond. The windows are 6/6 double-hung wood. The window openings have remnants of shutter hinges, but the shutters are missing. Over the door is a three-light transom. As mentioned under 1007 Cameron Street, this is one of two houses that were renovated together and connected to create an office building at some point between 1986 and 1992. As a result of the office conversion project, all exterior materials were apparently replaced except for a few small details such as the shutter hardware.

**1010 Cameron Street      100-0133-0222**

*Primary Resource Information:* **Office/Office Building, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two-story, three-bay brick building, presently an office building but probably built as a residence, incorporates details from the Queen Anne style and bold motifs from the Richardsonian Romanesque style into a façade design that is unusual for this district; the façade is on the form of an otherwise typical Uptown/Parker-Gray townhouse. The façade brick is laid in stretcher bond, possibly an indication that it is a facing over a common brick base. The windows are 1/1 double-hung wood with round-topped upper sashes in semi-circular arches. At the springing point of the arches and at the sills, the openings are connected by pairs of belt courses, with stone continuing the line of the stone sills and otherwise a single course of projecting brick. Vertical lines also divide the façade. Two-story pilasters frame a slightly projecting bay which rises to a gabled form at the top set against a false mansard. The gabled area has a basket weave brick detail. Fluted pilasters made of molded brick frame the two-leaf entrance doorway which consists of two narrow wood-framed doors with large beveled plate glass lights leading into a vestibule. Above the doors is a round-arched transom. The door is accessed by two steps and the pilasters support a horizontal cornice that has brick dentils and is a combination of a horizontal line of projecting brick and a wooden crown molding. The house is freestanding, but the side elevations are blank, party walls in character, and the façade, by contrast, appears to have been designed as if the building were part of a continuous row. A one-story, flat-roofed, brick addition is recessed at the west side. It has a tripartite doorway with a two-leaf door and a tripartite transom, apparently designed as a modern entrance vestibule.

**1012 Cameron Street      100-0133-0223**

*Primary Resource Information:* **Commercial Building, Stories 3.00, Style: Colonial Revival, ca 1990**

November 2006: This three-story, four-bay Colonial Revival style commercial building features a cornice on the first story and, in the upper stories, two projecting bay windows each of which is two stories tall. The brick walls are laid in stretcher bond. The foundation is not visible. The projecting bays have pedimented gable-roofed tops and are connected at the second story floor level by a turned balustrade allowing the top of the cornice to serve as a balcony. The two bays window terminate differently at the bottom in the first story: the western one rests on a wider projecting brick bay with a triple casement window on its north face, and the eastern bay window terminates with a curved wooden corbel form that resembles the hull of a ship and fills the space between two round-arched first story windows. The area below the cornice contains a one-story, one-bay porch with Tuscan columns and curved wrought-iron railings providing access to a tripartite doorway with a rectangular transom that has two layers of elliptical tracery. The door has twelve panels and no lights; it is flanked by square pilasters with Tuscan capitals, separating it from sidelights that are nearly full height. The center bay, above the entrance, has a slightly recessed tripartite doorway in the second story and a tripartite window in the third story, crowned by a broken pediment roof form. The windows are casements in the first story and 1/1 double-hung wood in the upper stories. The roof is a false mansard with standing seam roofing and with the three broken pediments capping the façade's three bays set against it. There is also a brick exterior end chimney.

**Section 7 Page 50**

November 2006: This five-bay, two-story, Colonial Revival style clubhouse building has brick walls laid in Flemish bond. The foundation is raised, constructed of brick with a watertable of molded brick found in line with the first story floor. Across the front of the building is a two-story, three-bay porch crowned with a large front-gable pedimented roof with dentils. The porch roof rests on double-height square wood columns, and at the brick walls, square pilasters. The windows are double-hung wood in a variety of sizes so that the pane patterns vary from 8/8, to 9/9, to 12/12, depending upon the opening. At the top of each door or window opening is a splayed jack arch of gauged brick. In the east side elevation, some of the windows are two stories tall and are in round-arched openings. The roof is flat, concealed behind a parapet. The entrance is centered in the first level of the porch with a similar doorway above it accessing the second level. The first story has a double-leaf entry door with a six-light transom.

*Primary Resource Information:* **Commercial Building, Stories 2.00, Style: Commercial Style, ca 1915**

November 2006: This two-story, three-bay, commercial warehouse building has brick walls laid in American bond. The foundation is solid, with a parged concrete surface. The first story windows are fixed panes of plate glass with wood frames built to serve as a storefront. Framing the entrance in the brick surface of the façade is a wide band of brick serving as a door surround. It only projects slightly from remaining plane of the wall. At the top of the façade is a corbelled cornice; one surface of the cornice continues down the façade as a pilaster at each side, framing the overall façade design. A large transom is found over the door; it is almost as tall as it is wide. In the second story, the windows are vinyl double-hung 6/6 sashes. A former loading dock area along the N. Henry Street side of the building where there were railroad tracks alongside the building when it was constructed is sheltered by a large, porch-like, low-pitched shed roof constructed of wood. In part, the roof shelters a projecting display window with plate glass on three sides; it is nearly half the depth of the porch-like loading platform in the east-west direction.

**1020 Cameron Street 100-0133-0224**  
*Primary Resource Information:* **Commercial Building, Stories 3.00, Style: Modern Movement, ca 1990**

November 2006: This three-story, three-bay, Modern Movement-influenced commercial building features soldier brick lintels, rowlock sills, and a metal balcony at each third story window opening. The brick walls are laid in stretcher bond, and they rise to form a parapet with a tall ornamental brick detail that resembles a corbelled brick cornice (vertical slots in the surface of the brick, twelve courses in height, nine or ten courses below a soldier-course at the cap of the parapet). The roof is flat, concealed by the parapet. The foundation is not visible. The windows are paired one-light metal casements, about seven feet tall, with dark metal frames that appear to be made of shop-finished anodized aluminum. The first story openings have transoms, and the center bay contains a centered, paneled door with no vision lights, flanked by narrow sidelights. A note on the 1992 Sanborn map indicates that it was under construction at that time and that the structural system of the walls is actually concrete block with a brick facing.

**1024 Cameron Street 100-0133-0225**  
*Primary Resource Information:* **Restaurant, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two-story, three-bay Queen Anne style building with strong Italianate influences and numerous later changes, currently a restaurant, has brick walls laid in stretcher bond with a variety of ornamental brick details. The foundation is not visible. The façade has paired bands of projecting brick serving as belt courses that connect the openings of the first and second story. The windows are metal storefronts with plate glass. The roof is flat, concealed behind a parapet. The building features pressed brick details, continuous sills and lintels, and segmental arches over the second story window openings. Within the segmentally arched openings, the windows have been reduced in size on the top and sides of each to accommodate vinyl replacement sashes with a 6/6 muntin grill pattern. At the top of the façade is a cornice of corbelled brick and wood behind which a parapet rises. The parapet has pilaster-like piers at the two ends. The Cameron Street entrance is in shed-roofed a projecting bay with a standing seam metal shed roof and a two-leaf entrance door consisting of wood frame doors with large lights of plate glass. Next to the entrance is a storefront window with mirrored/tinted glass and a dark frame, sheltered by an awning which doubles as a large sign that contains the name of the restaurant. There is a similar façade treatment on the North Henry Street side, although the Cameron Street façade is clearly the building's intended front. Based on its row house/town house form and early Sanborn maps of the area, this building was probably originally built as a combined storefront and second-story residence.

*Primary Resource Information: Single Dwelling, Stories 2.50, Style: Second Empire, ca 1875*

November 2006: This two-and-a-half-story, three-bay, Second Empire style brick house prominently occupies a corner location where is surrounded by a very large building constructed in the 1980s. The foundation is not visible. At the top of the house's two street-facing elevations, or façades, is a wood cornice with brackets and dentils supporting a mansard roof. The concave surface of the mansard roof has metal shingles. In the two street-facing sides of the mansard are gabled dormers with 1/1 wood sash windows. Over the entrance door facing Cameron Street is a broken pediment surround. Nearly all of the windows are in segmentally arched with wood inset panels at the top of the upper sashes. The windows are 2/2 double-hung wood. The N. Henry elevation has some areas with thin German brick. At the west side of the house, facing Cameron Street, is a two-story, two-bay brick addition with a different cornice design concealing what may be a flat roof.

**1201 Cameron Street 100-0133-0227**  
*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1880*

November 2006: This two-story, two-bay Colonial Revival style brick house has walls laid in American bond. The foundation is not visible. The façade has been substantially re-worked in a mid-twentieth century remodeling project resulting in minimalist Colonial Revival style details on the first story. The façade rises to a low-relief brick cornice with brick dentils, part of a parapet that conceals a flat or shed roof behind; the parapet is stepped at the side elevations. The windows are 2/2 double-hung vinyl flanked by decorative shutters. Each window opening has soldier brick lintels and rowlock sills. In the second story, the windows are in segmental arches. An entrance on the Cameron Street side has been in-filled. The façade has been altered so thoroughly that the original details are now blended with much later ones dating from approximately the end of the district's period of significance.

*Primary Resource Information: Fire Station, Stories 2.00, Style: Art Deco, ca 1940*

November 2006: This firehouse was constructed of brick in a style that is a blend of Art Deco style and Modern Movement influences. The foundation is not visible. The windows are double-hung 2/2 wood sashes with horizontal panes. The center portion of the building, containing two garage doors in the first story sheltered by a canopy and three bays of windows in the second story, projects forward from the larger building mass which is a bay wider to each side. The central windows are set in a cast concrete rectangular frame (the concrete frame is wide enough to contain five bays of window openings, but what would be the outermost bay to each side is now a blind reveal constructed of brick). The roof is flat, concealed by a parapet with a cap that appears to be covered with metal. The canopy over the garage doors is wider than the projecting section of the façade. It is rounded at the corners, extending out one bay further than the projecting area to shelter a (man door) doorway at each side of the garage area. Above the door that is west of the garage area is a vertical stone (or simulated stone) ornamental panel with an Art Deco style stepped pattern to each side. It contains ghosting of the letters "A F D," in a vertical orientation (presumably the acronym for "Alexandria Fire Department").

=====  
*Primary Resource Information: Single Dwelling, Stories 1.50, Style: Bungalow/Craftsman, ca 1930*

November 2006: This one-and-a-half story, seven-bay, Bungalow/Craftsman style frame house is clad in weatherboard. The foundation is not visible. Across the facade is a one-story, four-bay porch with Tuscan columns connected by a wood handrail capping a Chinese pattern balustrade. The windows are mostly double-hung bungalow window designs, although the pane patterns vary from 6/1, to 6/6, to 1/1. From the street, the sashes appear to be vinyl. The 6/6 windows in the façade are paired and appear to be enclosing a sunporch area, possibly part of an original wraparound porch. The 6/1 windows in the first story, in the main body of the house, appear as a set of three in one opening. At the center of the roof is a large front-gabled dormer which also contains a set of three windows. The roof is a side gable with asphalt shingles that sprocks out over the porch at a lower pitch. Along the edges of the roof are exposed rafter ends and knee-brace-style corner brackets. At the peak of the roof, at the north gable-end wall, there is an exterior brick chimney. The entrance has a transom and sidelights. The entrance is accessed by way of ten poured-in-place concrete steps that pass through a retaining wall along the sidewalk, and above them, a set of four wood steps leading up to the porch. The wood steps have a wooden post-to-post handrail. The site of the house elevated on a small hill, perhaps the highpoint in the entire district. The house sits back from front and side lines of the parcel about 10-25 feet, and the resultant front lawn, which is steeply sloped, contains flowers and a few small ornamental trees. There is a river rock retaining wall at the sidewalk level, and there are several street trees on the street side of the sidewalk.

**1501 Cameron Street      100-0133-0243**

*Primary Resource Information: School, Stories 1.00, Style: Modern, ca 1970*

November 2006: This property is the site of a two non-contributing Modern Movement style school buildings and a non-contributing public swimming pool with two pool houses. The complex includes a total of six resources. The oldest of the six is a one-story, six-bay, Colonial Revival style auditorium building constructed in 1942 as a USO club for white members of the armed forces. The larger of the two Modern Movement style school buildings was constructed like a large addition to the USO auditorium building as a way of incorporating it into the new building as the school's gathering space. Subsequently, the auditorium was made available to the public and renamed "Durant Center." It is constructed of brick, laid in stretcher bond, as a series of flat-roofed pavilions clustered around a slightly taller, gabled, center mass. Across the front are three pavilions, the center one having four bold, round-arched openings, of which the outer two contain recessed entrances with paired French doors below large fanlights. The flanking pavilions have segmentally arched openings with double-hung, 8/12 rectangular sash. The pavilions have flat roofs concealed by parapets, but behind them, the front gable of the building's center mass (auditorium) rises above the building's entrance and facade, with a large out-built chimney following the center line of the south-facing gable end. The foundation is not visible. Additional pavilions, porches, and entrances with arched brick openings are found in the exposed areas of the building's east and west side elevations. The large school building attached to the USO auditorium building is also one story. It covers a very large area, about five times as large as the older building, and it has a flat roof. The walls are constructed of panels of brick within a steel or concrete framework. The windows are large, single-light, fixed panes that extend from grade to the roof, often at the corners of rooms. The building has a generally rectangular floor plan with small angled walls at its corners. Rising from the building's unusually expansive flat roof are at least thirteen small mansard-like forms with standing seam roofing, each of which camouflages a cluster of mechanical equipment. The smaller school, which lies near the corner of Cameron Street and North West Street is of a similar design, but has a "U"-shaped floor plan and is only about an eighth as large as the main building. West of the auditorium building, sitting back from Cameron Street, is the swimming pool and pool house. The swimming pool is ell-shaped. The larger pool house, along the south side of the pool, blocks its view from Cameron Street. It has a floor plan that is rectangular except from a semi-circular cutaway area that creates a recessed entrance at the center of the Cameron Street side, and it has a monumental shed that begins low on the street side, but is high on the pool side. The smaller pool house building is at the west end of the pool. It is a small building behind a larger building-height wall that defines the recreational area from that side; the result is that, from the pool, the smaller building looks nearly twice as large as it is. The area around the buildings reads mainly as lawn and large shade trees from a distance, but nearly half of the open land is occupied by paving and recreational areas, including three playgrounds near the northeast corner of the parcel, one at the northwest corner with a basketball court next to it, and several walkways, driveways, and parking areas.

visible. Across the facade is a one-story, three-bay porch with Tuscan columns connected by a plain balustrade with square pickets. The windows are double-hung 1/1 vinyl sash with soldier lintels and rowlock sills. The roof has asphalt shingles. The porch is accessed from the street by about fifteen brick steps arranged in two flights with wrought iron railings to the sides. The house is located on an elevated, embanked site with a stone retaining wall in front along the sidewalk, and above that, a sloped bank with a wide variety of shrubbery and other ornamental plants in a designed landscape.

November 2006: This one-and-a-half story, three-bay Colonial Revival style house, in a bungalow form, has brick walls laid in American bond. The foundation is not visible. Across the facade is a one-story, three-bay porch with Tuscan columns connected by a plain balustrade with square pickets. The windows are double-hung 6/1 wood bungalow sashes. The roof is a side gable with asphalt shingles and an exterior end brick chimney. The roof sprocks out at a lower pitch as the roof of the porch. Above the porch, centered in the main roof, is a large gabled roof dormer containing three bays of windows. The porch is accessed from the street by way of two flights of stairs; first there are eleven stone steps piercing through a retaining wall, and above that, five wooden steps. The wooden steps have a wooden post-to-post handrail to each side with turned posts as the newels. The house is located on an elevated, embanked site with a stone retaining wall in front along the sidewalk, and above that, a sloped bank with a wide variety of shrubbery and other ornamental plants in a designed landscape.

November 2006: This two-story, two-bay, side-gabled, Greek Revival style brick row house has walls laid in American bond including a raised foundation. At the top edge of the façade is a brick cornice consisting of a course of brick dentils. Across the façade is a one-story, one-bay porch consisting of a nearly flat shed-roofed metal awning supported on decorative metal rod supports. The windows are double-hung 2/2 wood sashes with horizontal panes with jack arches over the openings and stone or wood lug sills. The roof has standing seam metal roofing and an interior end chimney. There is a two-light transom over the door, and the door is accessed by three or four concrete steps with a wrought iron leading up to the porch floor. The porch and the window sashes appear to date from the 1950s or 1960s. In front of the porch is a mature row of hedges that appear to be privet.

November 2006: This two-story, three-bay, semi-attached, Italianate style frame townhouse has been clad in PermaStone siding. The house is a twin with 529 North Columbus Street, which is also a frame house with PermaStone siding. The foundation is not visible. The false mansard roof is covered with asphalt shingles and is supported on a wooden cornice with brackets. The windows are double-hung 1/1 wood sashes. The windows are paired in a single opening in each story in the bay next to the entrance. The window opening size has been reduced in height by about five inches, and as a result, a solid panel has been placed at the bottom of each opening below the sash. Although the upper sashes are rectangular, the lintels contain a band of wood in the form of a segmental arch, and there is a wood corner block with a rosette detail at each end of each lintel. The primary entrance features a door hood with brackets and incised panels located in the area between a segmentally arched transom and the door hood. In place of a stoop, the door is accessed by way of a set of two or three concrete steps with no handrail. The house sits back from the street about ten feet and the front yard contains thick ornamental plants, some deciduous and some evergreen (like magnolia), some ten or more feet in height.

November 2006: This two-story, three-bay, shed-roofed, Italianate style frame town house is clad in German siding. The foundation is not visible. The windows are double-hung 6/6 wood sashes with surrounds that appear to have been embellished with scalloped side boards in a recent construction project. At the top of the façade, at the peak of the shed roof, is a cornice with brackets and a smaller bracket form in place of dentils. The spaces between the larger brackets have decorative boards with swag details painted in a contrasting color. A door hood with dentils and brackets protects the transom over the door, which is accessed by a single brick step in place of a stoop. Although the house appears to be attached to its neighbor, 532 N. Columbus Street, it is actually only the new façade which is attached. In so doing, the new façade blocks access to the narrow passage between the two neighboring buildings. A small side yard is enclosed with an unpainted wood privacy fence that has an arbor detail over the gate.

**531 Columbus Street North      100-0133-0264**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Bungalow/Craftsman, ca 1900**

November 2006: This two-story, two-bay, freestanding brick townhouse is a typical example of the townhouse form in Alexandria, except that in this case, all details have transformed slightly into details used in Craftsman style houses and/or Colonial Revival townhouses at the turn of the century. Where most townhouses in the district have false mansards that are derived from nineteenth century examples of true mansards, this house has a shed roof at the front with a deep overhang, essentially a false side-gable, except that it is enframed by firewall parapets and has an overhang that is deep enough to suggest that it may have once had knee brackets. The elements of Bungalow/Craftsman style, thus, are blended in subtle ways with elements of other styles. The house's brick walls are laid in American bond. The foundation is raised, part of the same American bond brick that continue up to form parapets at the roofline. The windows are 12/12 double-hung wood with 1/1 vinyl storm sash at each opening. The window and door openings have smoothly dressed stone lintels and sills. Metal racks for flower boxes have been affixed at the first story sills. The front face of the roof has standing seam metal roofing and exposed rafter ends at the overhang. There is a stained glass transom over the door. The door is accessed by a brick stoop, turned to the side, with a Colonial Revival style ornamental wrought iron railing.

November 2006: This two-and-a-half story, two-bay, side-gabled, Italianate/Greek Revival style house is clad in PermaStone siding. At the top of the façade wall, remnants of a wood cornice with brackets are still in place with PermaStone passing over the frieze panels between the brackets. The foundation is not visible. The windows are double-hung 1/1 vinyl replacement units with minimal wood trim. The side-gable roof has wood shingles, and at its center is a gabled dormer the width of two sets of window sash. At the sides of the dormer, there are exposed rafter ends. There is a swan-neck broken pediment door surround with heavy moldings at the entrance door which has a transom. Although there is no stoop, and the doorway is accessed without a step, there is a short section of wrought iron railing to each side of the door.

November 2006: This two story, three-bay, Italianate style frame townhouse is clad in aluminum siding. The foundation is solid and constructed of brick. The roof is a false mansard with asphalt shingles supported on a wood cornice with brackets and dentils. At the center of the false mansard is a triangular dormer-like vent with louvers. In the south end wall, there is a brick interior end chimney with a corbelled cap. The windows are double-hung 1/1 wood sashes. The door has a one-light, clear glass transom. There are dentils in the transom bar. The doorway has a plain surround, apparently simplified when the aluminum siding was installed. The door is accessed by a stoop consisting of three brick steps with a wrought iron railing to each side. To the south of the house is a side yard enclosed by a wrought metal fence. Behind the fence, the area is planted in flowering plants that are about four feet in height.

November 2006: This two-story, two-bay, Greek Revival style brick house features a one-story, one-bay porch with chamfered posts and a balcony with balustrade. The rectangular windows are 9/9 double-hung wood. The roof is a side-gable with shingles and an interior end chimney. Originally, this building and the adjacent building, located to the north, were constructed as two separate houses. Later combined, they are currently divided again. The brick façade, laid in American bond, features a sawtooth brick cornice, brick jack arch lintels and wood sills, and a transom. The foundation is not visible. The setback emphasizes the simple elegance of this house.

November 2006: This two story, three-bay, Italianate style frame townhouse is clad in aluminum siding. The foundation is solid and constructed of brick. The roof is a false mansard with wood shingles supported on a wood cornice with brackets and dentils. At the center of the false mansard is a triangular dormer-like vent with louvers. In the south end wall, there is a brick interior end chimney with a corbelled cap. The windows are double-hung 1/1 wood sashes. The second story window openings have peaked wood lintels with a bulls-eye ornament centered beneath the peak. The first story windows have simpler trim, apparently due to a modification when the aluminum siding was installed. Flower boxes have been mounted at the sills of the first story windows. The door has a one-light, clear glass transom. There are dentils in the transom bar. The doorway has a plain surround, apparently simplified when the aluminum siding was installed. The door is accessed by a stoop consisting of four brick steps with a brick cheek wall to each side. To the south of the house is a side yard enclosed by a solid wood privacy fence. Behind the fence is a large ornamental tree about twenty feet in height.

*Primary Resource Information:* **Church/Chapel, Stories 2.00, Style: Bungalow/Craftsman, ca 1910**

November 2006: This two-story, three-bay, Bungalow/Craftsman style building, originally constructed to serve a commercial function, is currently functioning as a church. Located at the end of a contiguous row of houses, the building is sited on the corner of a vehicular intersection. Although the original construction was similar to the adjacent houses, the change in function has resulted in the alteration of this building's original storefront design. The building is constructed from six-course, American bond brick with a Flemish variant. There is a brick parapet and a brick soldier course with corner blocks at the lintels. The false mansard roof is covered with synthetic shingles. The windows are double-hung 1/1 aluminum. Major alterations include the addition of metal awnings on each of the second story windows and brick infill on the façade and side elevation of the first story.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two-story, three-bay, Queen Anne/Italianate style frame town house is clad in composition siding. The foundation is raised, constructed of brick. The windows are double-hung 6/6 wood sashes. The shed roof has an interior end chimney. The house has the typical form of a shed-roofed Italianate town house in this district, but in this case, with some unusually refined Queen Anne style details that may be an indication of a remodeling project after the house was first constructed. There is a one-story, three-sided bay window on the first story which features a stile-and-rail framework below the sashes, with vertical beaded board infilling the frame in place of panels. There is an architrave door surround with paneled pilasters that are detailed with ovidart trim. Above the door is a two-light transom. The second story windows are paired above the first story bay window. The wood cornice consists of elongated Queen Anne style end brackets framing a row of dentils. The frieze below the dentils is constructed of vertical bead board.

*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Queen Anne, ca 1900**

November 2006: This two-and-a-half story, three-bay, Queen Anne style frame town house is clad in vinyl siding. The house is a complex form that is characteristic of some renditions of the Queen Anne style. The first story has an entrance bay next to a three-sided, semi-hexagonal bay window. Within the protruding bay, the windows are double-hung 12/12 vinyl sashes. Above the bay, at the ceiling line of the first story, is a side-gable roof form which continues up approximately a story and a half to the roof peak. Within the side-gable roof, above the first story bay, a two-bay section of the second story rises in line with the front facet of the bay window to form a front-gabled second story, with a sense of ambiguity as to whether it is a large dormer or a section of the main mass of the house with areas carved out beneath it at the sides of the first story bay window. In the gable end of this section, there is an attic window that leads to counting this building as more than two stories. A separate second story dormer-style window is located above the entrance door in the house's southernmost bay, just south of the larger gabled area. The second-story windows are 9/9 vinyl replacements. There are jack arch lintels on the basement windows. In the area next to the bay window, beneath the narrow second story dormer, there is a small one-story, one-bay porch. It has decorative wrought metal rods as supports, apparently replacing earlier posts or columns. The porch floor is brick and is accessed by a set of four brick steps. The porch and steps have wrought metal railings on all sides.

November 2006: This two-story, two-bay Queen Anne style house features a two-story projecting bay with a pyramidal roof. A wooden cornice with brackets is located under the false mansard roof. Both the mansard roof form and the pyramidal roof are covered in asphalt shingles. The second story of the wood frame building is covered with aluminum siding, the first story has Permastone facing. There are two front entrances, each with a shed roof door hood covered in asphalt shingles. (The entrances have different house numbers.) The windows are double-hung 1/1 vinyl replacement sashes. The design of this building suggests its former function as a corner store with a residence above. Large areas of plywood surrounding the front entrances and in the side elevation are evidence of a prior fenestration pattern. It appears that there were large display windows, which were apparently still intact when the first story was clad in Permastone.

cast concrete water table, cast concrete sills, a quatrefoil window, and a belfry. (The belfry is located above the projecting bay of the façade.) The first story windows are arched with jack arch lintels. Along the side elevations, a wooden cornice with dentils is located at the base of the roof. There are buttress supports between the window bays. In addition to the arched first story windows, with details like the façade windows, the rectangular basement windows are visible along the side elevations. At the eastern end of the church, one-bay chapel wings project to the north and south. The wings give the church the footprint of a cross.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Mission/Spanish Colonial Revival, ca 1920**

November 2006: This two-story, three-bay house is associated with St. Joseph's Church. Constructed as a rectory with design elements derived from the Mission style (or Spanish Colonial Revival style) creating the feel of a prairie School composition, the residence features stuccoed masonry construction, a hipped roof, and detailing reflective of several different architectural styles. A series of crown moldings forms a stark eave detail which

CONTINUATION SHEET**

**Uptown/Parker-Gray Historic District  
City of Alexandria, Virginia**

**Section 7 Page 69**

contributes to the Prairie style appearance. The house is also strongly reflective of the Mission style and specifically Spanish Mission motifs. The entrance is centered on the first story of the façade and accentuated by a barrel vault porch with projecting pilasters. A one-story wing is located on the southern side of the façade. The metal railing and canopy attached to the roof of the wing give the impression of a second story balcony. The first story rectangular double-hung 6/6, wood sash windows are located below arched recessed panels. Non-functional shutters are located on either side of the windows within the primary portion of the façade. The front yard is surrounded by a wrought iron fence and contains shrubs planted as foundation plantings and a tall, mature tree with many limbs branching out from a short trunk.

**721 Columbus Street North      100-0133-0303**  
*Primary Resource Information:* **School, Stories 1.00, Style: Art Deco, ca 1931**

November 2006: This one-story, eleven-bay, Art Deco style school building consists of a projecting center bay with two wings. The building features brick walls laid in American bond above a poured-in-place concrete foundation with exposed aggregate. The large, rectangular windows are six-light fixed metal with decorative brick detailing above. The flat roof is concealed behind a parapet with a metal-covered limestone cap, and there is a large, central, interior chimney. Additional limestone details include a prominent door surround at the primary entrance, simple surrounds at secondary entrances, window sills, and decorative panels, all detailed with long, layered lines, curved edges, and stylized carvings at the edges. The building name "Saint Joseph's School" is carved into the primary door surround, located in the center bay. Above the name is a stone cross. Overall, the building is a good example of a streamlined Art Deco design. It is one of the best examples of this style within this Historic District (Uptown/Parker-Gray Historic District).

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Italianate, ca 1870*

November 2006: This semi-detached, two-story, three-bay, Italianate style, frame house has vinyl siding, double-hung 1/1 vinyl windows, paired windows in the second story (which appear to be result of an alteration from an earlier design with evenly spaced windows), a wood cornice at the top of the façade (similar to the cornice at 906 N. Columbus but with smaller brackets), and a shed roof. The foundation is parged concrete. There is no visible chimney. A decorative ornament in the shape of an oversized keystone has been added to the lintel of the entrance door.

=====  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1870**

November 2006: This semi-detached, two-story, four-bay, Italianate style, frame house has wood siding, double-hung 2/2 wood windows, paired windows in the second story, a wood cornice at the top of the façade (similar to the cornice at 904 N. Columbus but with larger brackets), and a shed roof. The foundation is parged concrete. There is no visible chimney. A decorative ornament in the shape of an oversized keystone has been added to the lintel of the entrance door. The design of the façade resembles that of 904 North Columbus Street, with one main difference being that 906 North Columbus Street has a slightly recessed fourth bay at the north end of the house containing the entrance door but no second story window (this is an unusual design feature in this district, particularly for an early frame house). Like the entrance doorway at 904 North Columbus Street, a decorative ornament in the shape of an oversized keystone has been added to the lintel of the entrance door.

**908 Columbus Street North      100-0133-0338**

*Primary Resource Information:* **Single Dwelling, Stories 1.50, Style: Bungalow/Craftsman, 1928**

November 2006: This one-and-a-half story, three-bay, Bungalow/Craftsman style building (originally a laundry, now a house) is constructed of rock-faced concrete block. The windows are 6-light casements. The wall openings in the façade have rowlock sills and decorative brickwork lintels that have been parged. The two first story façade window openings have paired metal casements with six lights each, with a four-light transom at the top of each opening. Centered in the gable-end, above the first story, there is an attic window consisting of a single six-light metal casement with no transom. The roof is a front-gabled form with asphalt shingles. The only visible chimney is in the rear elevation of the building. This three-bay rock-faced concrete block house has parged brick lintels and concrete sills. Six bays of openings in the side elevations have metal awnings.

*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Greek Revival, ca 2000**

November 2006: This two-and-a-half story, three bay dwelling is a new building with a design derived from the Greek Revival style. It has a central entry with sidelights and a transom above. The form of the house is a front-gabled cube with the gable roof continuing over the two-story porch. The porch is supported by square wooden columns with applied moldings to form capitals. The windows are double-hung 2/2 wood sashes, and are paired above the first story. There is a pair of attic windows in the gable end over the porch. The second story of the porch is accessed by two doors with transoms in the outer bays, while the first story doorway is in the center bay. The house was built back-to-back with another one of the same design. At the center of the roof is a large cupola shared by the two houses.

**417 Earle Street North** **100-0133-0350**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, three-bay, freestanding, Italianate style frame town house with some Queen Anne style details is clad in aluminum siding. The foundation is not visible. The windows are double-hung 2/2 wood sashes. The roof is a false mansard with asphalt shingles supported on a wood cornice with brackets and dentils. In keeping with Queen Anne style detailing, the brackets are small, there are low-relief end brackets at the ends of the lintel boards of the window openings, and decorative patterns have been cut into the frieze at each window lintel using a combination of incising and sawn-work. There is a transom over the door, and the door is accessed by way of an uncovered, patio-like porch that extends across the façade, two steps up from the front yard. In front, there is an unpaved area, about three feet wide, with a few small ornamental plants. A similar unpaved area with a few plants is found along the south side of the parcel, alongside an alley.

November 2006: This two-story, two-bay, Italianate style house has brick walls laid in American bond. The foundation is not visible. The roof is a shed roof with no visible chimney. The windows are double-hung 2/2 wood sashes. There are segmental arches over the windows that consist of double header rows on the first story and altered soldier brick arches on the second story. At the top of the façade is a corbelled cornice with ornate dentils and bracket forms fashioned from brick. There is a two-light transom over the door and the ghosting of a door surround at the brick entry. This house is paired with 128 N. Fayette, which is nearly identical in its design. It also matches the older, unaltered details of 130 North Fayette Street.

*Primary Resource Information:* **Office/Office Building, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, three-bay, Italianate style office building, apparently built as a row house, has brick walls laid in American bond. The foundation is not visible. The roof is a shed roof and has no visible chimney. The windows are double-hung 2/2 wood sashes. There are segmental arches with double header brick rows on both stories. At the top of the façade is a corbelled cornice with ornate dentils and bracket forms fashioned from brick. Over the door is a diamond-pane transom. This building is nearly identical in design to the row house at 126 N. Fayette, which it adjoins. It also matches the older, unaltered details of 130 North Fayette Street.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay, Italianate style house has brick walls laid in American bond. The foundation is not visible. In the second story, the windows are 6/6 double-hung wood replacement sashes in openings that appear to have been reduced in size. In the first story is a 16-light bow window that appears to date from ca.1970. All the windows have rowlock sills. The roof is a shed roof, and it has no visible chimney. At the top of the façade is a corbelled cornice with ornate dentils and bracket forms fashioned from brick. At the entrance bay, there is a flush-surface door, above which a former transom has been in-filled with plywood and an air conditioning unit. The unaltered details of this building, such as the brick cornice, indicate that it was apparently built as part of a row of row houses, including 126 and 128 North Fayette Street (which are similar in form, age, and brick construction, and have matching cornices).

*Primary Resource Information:* **Store, Stories 1.00, Style: Colonial Revival, ca 1950**

November 2006: This one-story, three-bay Colonial Revival style commercial building has a brick façade (the building's east elevation) laid in American bond across the front of an otherwise exposed concrete block structure. The foundation is not visible. The façade has two storefront display window openings with rowlock sills, wood trim, and plate glass. The entrance is inset, and just above it, at the lintel line of the entrance and façade windows, is a wide wood cornice, placed low on the wall so that the brick wall behind it appears to rise as a tall parapet. The roof is flat, and it has no visible chimney. Metal grates have been placed over the windows. There are canvas awnings over the windows and the entrance, although the door awning is a lighter color perhaps because it was designed to be a location for the building's address to be written.

*Primary Resource Information:* Lodge, Stories 1.00, Style: No Style Listed, ca 1944

November 2006: This very plain, one-story, one-bay frame building with elements of the Bungalow style (related to its origin in the era of prefabricated mail-order buildings) has brick foundation walls laid in American bond and asbestos siding on the wood frame upper structure. The roof is a front gable with asphalt shingles. A small brick chimney is found off-center in the rear gable-end. The façade is technically one bay, as it has a doorway with expanses of solid wall to either side. There are 12/12 double sash wood windows in the side elevations. The front door and a similar one in the north elevation are sheltered by door hoods with knee braces. Along the bottom edge of the roof are angle-cut, exposed rafter ends. Above the front door is a vent in the gable end. The door is accessed by a concrete stoop with a welded metal pipe railing to either side.

*Primary Resource Information:* Store, Stories 2.00, Style: Italianate, ca 1875

November 2006: This two-story, four-bay, Italianate style corner store building has a brick finish on the exterior walls in a stretcher bond pattern (possibly a veneer over frame construction, also evidenced by stone quoins at the building's corner that appear to be an applied material such as Permastone siding). The foundation is not visible. The first story has two 1-light, wood storefront display windows with only a narrow band of wood trim around each opening. The display windows flank a simple entrance with a pressed metal door. A door to upper story residential space, to the side of the storefront area, has a door hood with brackets and dentils and a transom over the door leaf. The windows in the second story are double-hung 6/6 wood sashes, each of which is also surrounded by only a narrow band of wood trim. The building has a shed roof with an interior end chimney. The roof is concealed by a parapet finished with a wood cornice with brackets and dentils. The building form is aligned with that of a frame building at 302 North Fayette Street; the two buildings have matching cornices that align, suggesting that they were built together as a unified row.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Modern Movement, ca 1955**

November 2006:—This Modern Movement style brick building is cubic in form, two stories tall, three bays wide, and has a flat roof hidden concealed by a parapet, with no visible chimney. The design includes a doorway in the northernmost bay, with no window opening in the second story above the door; in the two bays south of the doorway, there are two large, square, window openings in the brick wall. Each opening contains two sets of double-hung, 1/1 wood window sashes, with a wood mullion down the center, a rowlock sill, and a concealed lintel. Projecting from the front of the building is a concrete-slab forming a terrace-like uncovered porch, or patio, on a brick base. The concrete area is surrounded by a wrought iron railing. This very simple modern design has been embellished with Colonial Revival style details, such as a wood surround at the door that consists on the sides of fluted pilasters, and decorative shutters to the sides of the window openings.

It is part of a continuous row of seven matching houses that closely resembles other rows in the same vicinity. This house is the third address in from the westernmost house in the row. It is constructed of textured brick laid in American bond. It has a raised foundation, and the façade rises from grade to a slate false mansard that conceals the flat roof. The false mansard is defined on the east side by a brick firewall and on the west side by the parapet of the adjoining house to the south (402 North Fayette Street). The door is accessed by a one-bay porch (or stoop) consisting of about 4 concrete steps that lead up from grade and a metal awning cover supported on metal rods. The windows are double-hung 2/2 wood sashes with horizontal panes. The window openings have rowlock sills and soldier course brick lintels. At the lintel line of the second story, the soldier course bricks form a belt course across the facade. There are metal awnings at all openings and a metal grate at the front door. The Sanborn Fire Insurance maps indicate that this house is constructed of brick-faced cinder block.

November 2006: This two-story, two-bay, brick row house is one of three matching houses in a row built as one design, a Modern-Movement-influenced cubic form with some Colonial Revival style details. It has a raised foundation and brick walls laid in American bond. The front door, which is in the center bay, is accessed by a small stoop with wrought iron railings in a "Chinese" pattern, sheltered by a metal awning. A modern (ca.1995), three-sided bay window unit consisting of three casements and a hipped roof has been inserted in the first story window opening. The second story windows are 1/ double-hung vinyl replacements sheltered by metal awnings. The brick façade wall rises as a flat surface to form a parapet concealing a flat roof. In the parapet, a metal vent is centered above each window.

November 2006: This two-story, two-bay, freestanding Colonial Revival style townhouse has a cubic form built of brick walls laid in American bond that rise to form a parapet concealing the flat roof. The foundation is raised, part of the same American bond brick walls. The windows are double-hung 1/1 wood sashes. In the bay next to the entrance is a triple window in a single opening in each story with a fixed one-light center pair of 1/1 window sashes flanked by more narrow double-hung 1/1 window sashes. The window and door openings have rowlock sills and concealed lintels. There is a canvas awning over each window opening. The entrance door has a storm door with a metal grate. The door is accessed by an uncovered concrete and brick porch the width of the house with a wrought iron railing. The house sits back from the street about 20 feet, and the resultant front lawn is enclosed with an ornamental wrought iron fence and contains low shrubs and a deciduous ornamental plant. The Sanborn Fire Insurance maps indicate that this house is constructed of brick-faced concrete block.

November 2006: This two-story, three-bay Colonial Revival style brick house has a cubic form like other mid-twentieth examples of the style in this part of Alexandria. It has a raised foundation with a basement door and windows in a well that extends across about 2/3 of the façade. The walls are laid in American bond and rise in a single plane in each elevation from the basement window well to a parapet concealing the flat roof. At the top of the façade is a cornice with modillions. Accessing the front door is a one-story, one-bay porch with seven brick steps leading up from grade. The porch has a gable roof supported on square columns. The windows are 6/1 double-hung wood. The window openings have rowlock sills and soldier course brick lintels. A two-story side porch is large enough to be a prominent feature in views of the façade. It has square wood posts and a wood balustrade in each story. The first floor portion of the porch is accessed by a set of steps, but the second story is an uncovered balcony with access only from second story rooms.

November 2006: This two-story, three-bay, semi-detached, brick house is half of a pair of twins, built to appear as one design, in a ca.1900 variation on the Colonial Revival style. The other half is 420 North Fayette Street. This is one of several pairs of large brick houses built as twins in the area west of North West Street in the 1890s and shortly after 1900. The façade is brick laid in American bond in one continuous plane across the façade of both this house and its twin at 420 North Fayette Street; it rises from a raised basement at grade to form a parapet that conceals the flat roof. At the base of the parapet, a wood cornice extends across the façade of both of the paired houses. The windows are double-hung 1/1 wood sashes with cast concrete lug sills and lintels. There are metal awnings at all openings. The front door is sheltered by a porch consisting of a metal awning supported on metal rods over a stoop with brick cheek walls. The house sits back from the street about 25 feet, and the front and side yard are planted in grass and enclosed with chain link fencing. A portion of the front yard, at the southeast corner of the parcel, is paved as a parking pad. The house was renovated shortly after the survey was completed, and the awnings were removed at that time.

November 2006: This two-story, three-bay, frame, Italianate style townhouse has German siding. The foundation is not visible. Across the first story of the façade is a one-story, three-bay porch with turned posts. The windows are double-hung 1/1 wood sashes. At the top of the façade is an asphalt-shingled false mansard roof supported on a wood cornice with brackets and dentils. There is a transom over the entrance door. A picket fence defines the front lawn, and a gravel driveway occupies all the space left on the parcel south of the house's south wall.

*Individual Resource Status: Single Dwelling      Contributing      Total: 1***500 Fayette Street North      100-0133-0424***Primary Resource Information: Commercial Building, Stories 1.00, Style: Art Deco, ca 1955*

November 2006: This is a one-story Art Deco style commercial building (an automobile dealership now serving exclusively as an auto repair garage) built in 1955 with a large, sweeping, quarter-circle curve at the corner of North Fayette and Oronoco Streets. The brick exterior walls are laid in American bond. The foundation is not visible. The building is part of a row that occupies a half block of land, from Oronoco to Pendleton Street along the west side of North Fayette Street. The adjoining buildings immediately to the north are very plain and look at first glance as though they are part of this building, although they are actually separate and were built at a different time. The windows consist of a large plate glass storefront display area, three bays of steel casement windows, and four bays of smaller windows that indicate that a limited area of the interior has two stories (the 1992 Sanborn map indicates a small mezzanine on the opposite side of the four-bay section of wall). All the windows were completely or partially boarded up at the time of the survey. The storefront windows appear to have mill-finished aluminum frames arranged radially to approximate the curved shape of the wall at the corner. Only the bottom half of the steel casement windows was boarded up, but the four bays of smaller windows were completely covered. Some of the boards closing-in the windows contain vents or air conditioning units. Between the steel casements and the part of the building that is two stories, there is a recessed entry, the main way in and out of the building at the time of the survey. There are five more bays of small openings arranged to reflect to stories (apparently another mezzanine) on the Oronoco Street façade. A garage door opening with a roll-up door occupies two of the first story bays. An additional bay with a roll-up garage door was added at the west side of the building along Oronoco Street by 1958. The roof is flat, concealed behind a parapet, and there is no visible chimney. A notation on the 1958 and 1992 Sanborn maps indicates that the actual structural system is brick-faced cinder block with a concrete slab floor and a metal roof deck.

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Colonial Revival, ca 1940**

November 2006: This very plain, one-story, three-bay, brick warehouse building with a flat roof concealed behind a brick parapet was built between 1941 and 1955, the northernmost building in a row of warehouses that stretches along the west side of North Fayette Street from Oronoco Street to Pendleton Street. The building and its equally plain neighbors to the south appear at first to be part of a rear wing of 500 North Fayette Street, which was built as an auto dealership building with a sweeping, quarter-circle storefront display area facing the intersection of Oronoco and North Fayette Streets; however, 526 North Fayette Street is older than the auto dealership building. The two-bay façade consists of a large garage door opening in the southern half of the building and three bays consisting of a door flanked by two windows in the northern half. The windows are tall, single lights of glass, each in a mill-finished aluminum frame. The window and door openings have soldier course lintels and the doorway has brick quoins to the sides. The building's brick façade is laid in American bond and has been painted. The paint includes borders around the openings to disguise remnants of

**Section 7 Page 92**

segments of lintels and other evidence of the older fenestration pattern. At the top of the façade is a brick cornice with brick dentils and a metal or cast concrete cap. The adjoining buildings to the south (510 and 518 North Fayette Street) and north (524 and 526 North Fayette Street) were constructed with very similar façade details, such as the brick cornice.

**501 Francis Court      100-0133-0431**

*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Colonial Revival, ca 1990**

November 2006: This recently constructed, three-story, three-bay, gable-roofed, Colonial Revival style brick house with walls laid in stretcher bond was constructed on a courtyard/alley site at the center of a city block. The foundation is raised (but counted as the first of three stories or the purposes of this form) to incorporate the full height of an at-grade garage. The garage is entered through a segmentally arched opening in the east gable end elevation. The front of the house, facing north, has a centered entry one story above grade, which is sheltered by a one-story, one-bay, gable-roofed porch on square wood posts. The porch is accessed by a set of wood stairs with a landing at the center. The porch and stairs have wooden railings with wood lattice serving in place of a balustrade. The windows are double-hung 6/6 wood sashes with rowlock sills and decorative louvered shutters. There is a semi-circular brick arch at the attic level suggesting the intention to install a large fanlight style attic window, but the arch is enclosed with plywood. A two-story, one-bay by one-bay inset porch occupies the southeast corner of the house, within the gabled form. Like the entrance porch, it has a square wood post and a wood railing with lattice in place of a balustrade. The roof is a side gable with asphalt shingles, and there is no visible chimney. The 1992 Sanborn map indicates that the brick exterior of the building is a veneer. On the small strip of land surrounding the house, shrubs and other small ornamentals have been placed as foundation plantings. The shrubs conceal the area beneath the entrance porch.

November 2006: This two-story, two-bay Colonial Revival style brick row house is the southernmost address in a row of thirteen adjoining houses built together and designed to match. The row closely resembles other rows found nearby in the 1400 block of Cameron Street, the 100 block of Peyton and Baggett Streets, and across the street in the 100 block of Harvard Street. The house has brick walls laid in American bond, including a raised foundation. The façade rises from grade to a false mansard roof with asphalt shingles. There are brick firewall parapets at the end walls framing the false mansard. The windows are double-hung 1/1 wood sashes, paired in both stories in the bay next to the entrance bay. The window openings have smoothly dressed stone or cast concrete lug sills and lintels. Across the facade is a one-story, one-bay porch with Tuscan columns that has been enclosed with six bays of screen including a screen door. The row is located on an embanked site. An eight-course brick retaining wall surrounds the area in front of the house which is planted with some small topiary plants and a few other ornamentals. There is thick ivy at the south edge of the parcel where the retaining wall and the south wall of the house abut an east-west alley. The porch is accessed by a set of ten brick steps with stepped brick cheek walls connected to the brick retaining wall. There is a metal railing to one side of the steps. This block is shown as vacant on the 1921 Sanborn map, but the houses appear on the 1941 map.

November 2006: This two-story, two-bay, Craftsman/Colonial Revival style house has a false mansard with terra cotta barrel tile roofing framed by firewall parapets as the end walls rise above the surface of the roof. At the bottom of the false mansard, at the eaves, are brackets which are paired in the end locations. The foundation is raised. The exposed surface of the façade is extruded brick laid in stretcher bond. The windows are double-hung 6/1 wood sashes, paired in the bay next to the entrance bay. The openings have smoothly dressed stone or cast concrete lug sills and lintels. Across the front is a one-story, two-bay porch with Tuscan columns and a plain wood handrail. The entrance has a transom and sidelights surrounding the door. The porch is accessed by a set of ten concrete steps, arranged in two flights. The upper flight is wider and has concrete cheek walls. The site is embanked and the front yard is encircled by a brick retaining wall a little over two feet in height. The area within the retaining wall is further terraced with wood ties and contains ornamental shrubs at the front edge of the porch and several smaller plantings.

in a 1980s interpretation of the Colonial Revival style. Three of the houses (this one and the two immediately north of it) were built in matching designs. The walls are brick laid in stretcher bond including a raised foundation. The windows are rectangular double-hung 6/6 wood sashes in segmentally arched openings. The side gable roof is clad in asphalt shingles. At the center of the front face of the roof is a gabled dormer with horizontal siding, wide corner boards, and a 6/6 window. There is also a basement window in the facade, which is covered by a metal security grate. The entrance door is accessed by a seven-step brick stoop with a wrought iron railing to each side. The row sits back from the street about 25 feet, and the front yard is encircled by a seven-course brick retaining wall. Within the area defined by the retaining wall are several small shrubs. The 1992 Sanborn map indicates that the actual structural system is concrete block with brick facing.

November 2006: This two-and-a-half story, two bay, side-gabled, brick row house is the second address in from the south of five adjoining houses built in a staggered row in a 1980s interpretation of the Colonial Revival style. Three of the houses (this one and the adjoining houses to the north and south) were built in matching designs. The walls are brick laid in stretcher bond including a raised foundation. The windows are double-hung 6/6 wood sashes with a flared lintel of smoothly dressed stone or cast concrete and a brick rowlock sill at each opening. The side gable roof is clad in asphalt shingles. At the center of the front face of the roof is a gabled dormer with horizontal siding, wide corner boards, and a 6/6 window. There is also a basement window in the facade. The entrance door is accessed by an eight-step brick stoop with a wrought iron railing to each side. In the staggered line of the row, this house sits back further than the ones to either side of it. The row sits back from the street about 25 feet, and the front yard of this house is mainly a paved area that also serves as part of the entrance path to the next house to the right and left. Planted as foundation plantings at the façade are two small, pointed evergreens (possibly arbor vitae), and there are two small ornamental trees closer to the front of the parcel. The 1992 Sanborn map indicates that the actual structural system is concrete block with brick facing.

November 2006: This two-story, two-bay Colonial Revival style brick row house is the fifth address in from the south in a row of thirteen adjoining houses built together and designed to match. The row closely resembles other rows found nearby in the 1400 block of Cameron Street, the 100 block of Peyton and Baggett Streets, and across the street in the 100 block of Harvard Street. The house has brick walls laid in American bond, including a raised foundation. The façade rises from grade to a false mansard roof with asphalt shingles. There are brick firewall parapets at the end walls framing the false mansard. The windows are double-hung 1/1 vinyl replacement sashes, paired in the upper story in the bay next to the entrance bay (the first story window opening in this bay has been altered). The window openings have smoothly dressed stone or cast concrete lug sills and lintels. Across the facade is a one-story, two-bay porch with Tuscan columns and a wood railing with turned balusters. A column near the center of the porch serves as the northern terminus of the railing, where the neighboring houses have a newel post instead. The area beneath the porch floor is enclosed by lattice. The row is located on an embanked site. A low concrete retaining wall surrounds the area in front of the house which is planted with small shrubs and has two pointed evergreens (possibly arbor vitae) flanking the front steps. The porch is accessed by nine concrete steps arranged in a single flight. Although there is technically no porch railing, a cast iron railing (possibly re-used from another building) has been placed in the lawn a little less than a foot from the concrete on the north side of the steps. The cheek walls of the front steps are stepped and contain a cast concrete urn on each side, with a cast concrete lion on the next cheek wall step on each side above the urns. This block is shown as vacant on the 1921 Sanborn map, but the houses appear on the 1941 map.

November 2006: This two-story, two bay, shed-roofed, brick row house is the fifth house in from the south (i.e., northernmost) of five adjoining houses built in a staggered row in a 1980s interpretation of the Colonial Revival style. The form of the house, with the roof shedding to the side, is an allusion to what is often called the "flounder" house in Alexandria, a house type that began when rear wings of houses were constructed first and the more formal front section was never completed. The walls are brick laid in stretcher bond including a raised foundation. The windows are rectangular double-hung 6/6 wood sashes in segmentally arched openings with rowlock sills. The side gable roof is clad in asphalt shingles. There is no doorway in the street-facing façade: the entrance door is in a shed-roofed, one story projection at the side (north) elevation along an alley. There is also an exterior end chimney next to the entrance projection in the north elevation. The row sits back from the street about 25 feet, and the front yard of this house contains hedges and shrubs planted as foundation plantings.

Across the facade is a one-story, one-bay porch with square brick columns and a plain wood railing with square balusters. The brick columns are wider at the bottom, from grade up to a point just above the hand rail; the columns step in above the handrail and then step out again for two courses at the top as an approximation of a capital. The area beneath the porch floor is enclosed with brick and has a window. The row is located on an embanked site. A row of hedges screens the view of the area of the porch below the floor. The porch is accessed by ten concrete steps with a wood handrail on the north side (the handrail has three support posts but no balusters). This block is shown as vacant on the 1921 Sanborn map, but the houses appear on the 1941 map.

November 2006: This two-story, two-bay Colonial Revival style brick row house is the ninth address in from the south in a row of thirteen adjoining houses built together and designed to match. The row closely resembles other rows found nearby in the 1400 block of Cameron Street, the 100 block of Peyton and Baggett Streets, and across the street in the 100 block of Harvard Street. The house has brick walls laid in American bond, including a raised foundation. The façade rises from grade to a false mansard roof with asphalt shingles. There are brick firewall parapets at the end walls framing the false mansard. The windows are double-hung 1/1 vinyl replacement sashes, paired in both stories in the bay next to the entrance bay. The window openings have smoothly dressed stone or cast concrete lug sills and lintels. Across the facade is a one-story, one-bay porch with Tuscan columns and a plain wood balustrade with square wood balusters. The row is located on an embanked site. A low concrete retaining wall surrounds the area in front of the house. The sloped front lawn contains a few small shrubs and some flowers. The porch is accessed by a set of steps with a wood railing to each side; the wood railing is a top rail only, with no balusters, bottom rail, or intermediate posts. The post at the top, where the railing meets the porch balustrade has a lathe-turned ball at the top. This block is shown as vacant on the 1921 Sanborn map, but the houses appear on the 1941 map.

**Henry Street North**

**220 Henry Street North      100-0133-0459**

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Modern Movement, ca 1959**

November 2006: This one-story modern era commercial building (an automobile repair garage) forms a large ell-shape in plan around a paved space that is bordered by and accessed by both North Patrick Street and a perpendicular alley known as Braddock Court. The exterior face of the walls is brick laid in American bond. The foundation is not visible. The two elevations facing into the paved courtyard have a total of nine openings, as follows: five large garage door openings with roll-up doors on the east-west wall that is perpendicular to North Henry Street, and on the wall that parallels and faces the street, two large garage door openings with roll-up doors, plus a 12-light steel casement window and a man-door at the corner where the two walls meet. A sign on the east-west wall says "BRADHAM AUTO ELECTRIC INC." The roof is flat, concealed behind a parapet with a terra cotta cap. A brick 1960 addition, about a fourth the size of the original building in footprint, projects from the west side. Two other additions of approximately the same size appear to have been built on the west side of the building after 1960, one of which has a large chimney at its corner and the other of which is two stories and faces North Fayette Street. The two story addition has three large garage door bays facing west, with a man-door to the side and four corresponding bays of windows with mill-finished aluminum frames in the second story. In three of the four bays, each second story window bay actually contains two windows separated by a large square of stucco. On the west side, beyond the additions, is a large paved area, about a third of the total parcel, that faces toward North Fayette Street but is blocked off from the street by a chain link fence. A notation on the 1992 Sanborn map indicates that the building's actual structural system, beneath the brick facing, is concrete block. The other components of the building, according to the map, are non-combustible construction consisting of unprotected steel columns or beams, a reinforced concrete frame, a concrete floor, and a steel deck roof.

**224 Henry Street North      100-0133-0460**

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Commercial Style, ca. 1956**

November 2006: This one-story, six-bay modern era commercial building was built in five stages between 1956 and 1964. (The 1964 addition projects to the north and faces Queen Street; it is counted as a separate building for the purposes of this project because it faces a different street, has its own address, contains a different occupant, and is not visually connected as a result of the way the original building and additions wrap around 238 North Henry Street, a separate, unrelated building at the street corner.) The two sections facing North Henry Street were built in 1956 and 1959-60. Although internally interconnected, construction line and different fenestration patterns distinguish between the two, each of which has its own entrance door at the center. The building has brick walls laid in American bond that rise to form a uniform parapet that conceals the flat roof. The foundation is not visible. The windows are fixed in metal frames with a mullion down the center dividing each opening into two sheets of plate glass. The older façade (north half) has a transom above the entrance door which is flanked by plate glass windows with concrete sills. There are roll-down security covers that cover not only the door opening and each of the windows, but also the brick area beneath the windows when closed. The second building's façade (southern half) has a door at the center with a hinged security gate of expanded metal, flanked by window openings that have been bricked-in with a recessed panel of brick leaving the outline of the openings apparent above the concrete sills. Two signs on the façade both say "IDEAL TILE." A small area of a concrete block side wall can be seen at the northeast corner of the building revealing a blended construction system. A notation on the 1992 Sanborn map indicates that the building's actual structural system is concrete block with a brick facing. The other components of the building, according to the map, are non-combustible construction consisting of unprotected steel columns or beams, a reinforced concrete frame, a concrete floor, and a steel deck roof.

=====  
*Primary Resource Information:* **Lodge, Stories 2.00, Style: Craftsman, ca 1904**

November 2006: This two-story, five-bay, Bungalow/Craftsman style lodge building resembles a large side-gabled, center hall house from the front. It has brick walls laid in stretcher bond, and the foundation is raised, part of the same stretcher bond brick construction as above. The roof is a false side gable (one slope shedding toward the street, with a flat roof extending away from the street from the roof crest) with asphalt shingles and stepped firewall parapets at each end. The stepped parapet has a stone cap at each step. Across the façade is a one-story, three-bay porch with Craftsman style tapered square wood columns on brick piers; the brick piers are the ends of a brick balustrade that continues down to grade to close-in the area beneath the porch floor. The brick balustrade has four decorative weep holes just above the porch floor, each consisting of a pattern of four missing headers arranged in a diamond or abstract floral pattern. The porch is accessed by a wide set of six concrete steps with brick cheek walls and a welded pipe railing at the center. The entrance, in line with the steps at the center bay of the porch, has a pair of flush metal doors that appear to have replaced an earlier wood door design, most likely with sidelights that have since been removed to standardize the door leaves and widen the opening. The doorway has a four-bay wood transom. The windows are double-hung 6/6 wood sashes with rowlock sills. Despite the fact that the apparent side-gabled form and symmetrical façade suggest a building that is the depth of one or two residential-sized rooms, the building actually extends to the rear as a large two story, flat-roofed form. The firewalls that flank the side-gabled portion of the roof level-off above the crest of the roof and continue as parapets on each side of the building. The side elevations have about five bays of windows in segmental arches in each of two stories, and then, behind that is a second mass of nearly the same size, apparently an addition (some portion of the building is a major addition constructed in 1932), that extends the building to the east in line with the north wall; however, it is wider than the front section, and thus steps out one bay at the south wall. The building sits back about eight feet from the edge of the sidewalk. The area in front of the porch is planted in grass and is encircled by a low concrete retaining abutting the sidewalk. The retaining wall is the same in form and size as a typical concrete curb between a street surface and sidewalk.

**229 Henry Street North      100-0133-0458**

*Primary Resource Information:* **Store, Stories 2.00, Style: Italianate, ca 1870**

November 2006: This two-story, four-bay, Italianate style frame commercial building appears to be two different but roughly contemporary buildings built side-by-side. It appears to have been built in two stages, as a residence (in an unusually narrow form for a house in this district) and an attached storefront building with second story space that may have been part of the residence. (The 1992 Sanborn map indicates a commercial use for the entire building.) The building has weatherboard siding and a brick foundation laid in Stretcher bond. The storefront portion of the building has a shed (or partially hipped) roof that sheds to the south side hidden by a wood parapet that has the character is a western-style false-front. At the top edge of the parapet is a wood cornice with brackets and dentils. The residential portion of the building has a side-gabled roof form designed so that it is asymmetrical from the side, providing a steeply sloped front face that is similar to a false mansard. The front face of the roof has standing seam roofing and a triangular dormer. At the base of the roof is a cornice with brackets and dentils. The cornice appears to have been modified by the addition of a new fascia board making it seem "boxed-out" over the brackets, concealing them, but otherwise it matches and is nearly in line with the cornice of the other portion of the building. The windows are double-hung 1/1 wood sashes. At the lintel of each window and door opening is a hoods supported on brackets. The entrance to the commercial part of the building is accessed by three brick steps with no handrail. The entrance to the other side has a four-step brick stoop, turned to the side, with no handrail. In place of a larger display window, the first story window of the storefront half of the building is a double-hung 1/1 wood sash window, slightly larger than the building's other windows, covered by a metal security grill. Above the window and door of this part of the building is a nailed-on wood sign that says "COMMUNICAIDS." A narrow unpaved area in front of the building (which is apparently part of the public right-of-way) contains a hedge and a young tree that is approximately the same height as the building.

**238 Henry Street North      100-0133-0461**

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Modern Movement, ca 1960**

November 2006: This one story, three-bay, modern era commercial building has painted brick walls laid in American bond. The foundation is not visible. The façade has a centered entrance door but is otherwise asymmetrical, with a larger four-light fixed window in a metal frame to the south of the entrance and a smaller nine-light steel casement window north of the door. Both windows may have originally been steel casements. The roof is flat, concealed behind a parapet. The door is a recent residential metal door design with pressed panels and a narrow light at the center. Above the door is a solid panel, apparently filling-in an earlier transom. Over the panel is a sign saying "LIBERATION / BOOKS." With respect to North Henry Street, the building sits back a couple of feet from the facades of its neighbors to the south, and a small square of land at the street corner is unoccupied, but in both cases, the extra land is paved and appears as an extension of the sidewalk. The storefront buildings at 1104 and 1108 Queen Street appear to have been built as additions to this building, but they have been treated separately for this survey because they have separate occupants and addresses and because they are no longer visually related. The Sanborn maps indicate concrete block construction; the 1958 Sanborn map shows the parcel as vacant, and the 1941 map shows a row of houses in this location with a restaurant occupying the corner address.

**310 Henry Street North      100-0133-0468**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1875**

November 2006: This two-story, two-bay, shed-roofed, Italianate style, frame house is clad in German siding. It is one of three identical, adjoining frame houses built in a row. The only differences between the three are minor details that were changed during remodeling campaigns over the years. The foundation is brick. The windows are 1/1 double-hung wood. The surface of the shed roof is not visible, but there is an exterior end chimney toward the rear of the south elevation near the house's southeast corner. The entrance has a transom and a door surround with a hood-like lintel on brackets and dentils, and the lintels over the window openings also have similar hood-like details with brackets. The flashing at the top of the door hood rises as a small hipped roof connecting to the sill of the second story window above.

**311 Henry Street North      100-0133-0462**

*Primary Resource Information:* **Commercial Building, Stories 2.00, Style: No Style Listed, ca 1985**

November 2006: This two-story, nine-bay frame building constructed in the 1980s, vaguely resembles other frame buildings in the Uptown/Parker-Gray area in terms of scale, proportion, and fenestration. It appears to have been designed to have the key characteristics of a vernacular, cross-gabled, center-hall house from the late Victorian period (it can also be interpreted as an "upright and wing" form), as modified over time, except that the façade with the centered entrance is oriented perpendicular to the street. The exterior is clad in composition siding, with a small section of concrete block foundation that has been parged, and the roof has asphalt shingles. On the North Henry Street side, there is no doorway. On the elevation that fronts the street, the house has a three-bay-wide, gabled main front section (the perpendicular north wall of which contains the entrance) and a six-bay, slightly recessed wing designed to look like an addition or the kitchen wing of an older house. The first story contains six square, one-light windows in wood frames. The windows occur in three pairs, so that there is less space between two paired ones than there is to either side of the pair. The northernmost four bays are in a one-story part of the wing with a tall gabled roof the ridge of which runs parallel to North Henry Street. The eaves of this roof continue south as a rake under the next two bays where there is a full-height second story with double-hung 1/1 wood sash windows above the rake. The building has some features that were in poor repair at the time of the survey and also looked like components of a much older design. However, a comparison of the 1958 Sanborn map to the 1992 map reveals that the site formerly contained a pair of twin houses and a second pair of twins at what is now a vacant parking area south of the building. The wing extending to the east also replaced half of a third pair of twin houses, the remaining half being 323 North Henry Street. From the Sanborn maps, it is clear that the buildings that existed at this site were oriented very differently from what is there now, and that the current design appears to be an entirely new building. The building sits back from the street between two feet (front section) and four feet (wing portion), and the consequent strip of unpaved land contains a row of small ornamental plants. There is a parking lot to the south and east.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1875**

November 2006: This two-story, two-bay, shed-roofed, Italianate style, frame house is clad in German siding. It is one of three identical, adjoining frame houses built in a row. The only differences between the three are minor details that were changed during remodeling campaigns over the years. The foundation is brick. The windows are 1/1 double-hung wood. The surface of the shed roof is not visible. The entrance has a transom and a door surround with a very small hood-like lintel which appears to have been altered and reduced in size by comparison the two flanking houses. The lintels over the window openings also have hood-like details with brackets.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1860**

November 2006: This two-story, two-bay, side-gabled, Greek Revival style, frame house is clad in German siding. The foundation is not visible. The windows are 2/2 double-hung wood. The side-gable roof has asphalt shingles, and there is an interior end chimney centered on the ridge of the gable in the house's south wall. At the top of the façade is a wood cornice with dentils. This house is unusual in that it is wide enough to have more windows, and as a result, it is not quite symmetrical and does not resemble most other side-gable Greek Revival style houses in the district. Rather than being in line with the neighboring houses, this house sits back from the sidewalk five or six feet and has a wooden picket fence enclosing the front yard.

*Primary Resource Information:* **Store, Stories 1.00, Style: Modern Movement, 1958**

November 2006: This one-story, two-bay, flat-roofed, Modern Movement style commercial building has brick walls laid in American bond. The foundation is not visible. The windows are fixed, 1-light plate glass installations, of the commercial display window type, in a frame that includes aluminum details. The openings also have rowlock sills. The roof is flat, concealed behind a parapet, with no visible chimney. The building has an inset entrance door. A note on the Sanborn maps indicates that the actual structural system is concrete block with brick facing.

*Primary Resource Information:* **Church/Chapel, Stories 2.00, Style: Italianate, ca 1995**

November 2006: This two-story, three-bay, Italianate style, frame building was built after 1992 in a style that closely resembles typical residences built between 1870 and 1910 in the district. It contains a church. The building is clad weatherboard, and the foundation is parged concrete. The windows are 6/6 double-hung wood. The roof is a false mansard with asphalt shingles. At the base of the false mansard is a modest-scaled cornice with dentils. Over the door, there is a three-light transom, and metal grates protect the first story window openings.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1875**

November 2006: This two-story, three-bay, Italianate style frame house is clad in aluminum siding. The foundation is parged brick. The windows are 6/6 double-hung wood. The roof is a false mansard with pressed metal shingles. At the base of the false mansard is a wood cornice with brackets and dentils. Sheltering the entrance is a pedimented door hood supported on metal brackets with dentils at the bottom of the tympanum. The windows have wood surrounds, and the door surround incorporates fluted pilasters. This house is an example of the most common nineteenth century form and style for town houses in the district made unique by the addition of several details from different periods, such as the Colonial Revival style door hood, the 6/6 windows which could be original, and the mid-twentieth century aluminum siding.

November 2006: This two-story, two-bay, side-gabled, Greek Revival style house (one of the oldest houses in this part of the district) is clad in aluminum siding. The foundation is not visible. The roof has standing seam metal roofing and two exterior end chimneys in the south wall. The chimneys are brick with corbelled caps, the one in the front face of the roof being a little shorter and exposed brick and the one in the rear face of the roof being taller, parged, and capped with two metal caps with screened sides at the top of partially exposed terra cotta flue liners. The windows are 2/2 double-hung horizontal wood. At the top of the façade is a wood cornice with brackets. The windows are double-hung 2/2 wood sashes with horizontal panes. All the windows have decorative louvered shutters, and there is a metal grate on the first story window. The door, which is almost at grade, is accessed by a gently sloped sidewalk that rises to the top surface of the threshold. The house sits back from the street about eight feet, and the resultant unpaved area contains a small tree, two lines of low hedges, marble-chip ground cover, and a border of simulated stone most of which has been painted white.

*Primary Resource Information:* **Church/Chapel, Stories 1.00, Style: Colonial Revival, ca 1960**

November 2006: This five-bay church building is a recently constructed flat roofed building in an interpretation of the Colonial Revival style with brick walls laid in Flemish bond and radial brick jack arches with two-stage stone keystones. The windows are stained glass in mill-finished aluminum frames. The roof is concealed behind a parapet embellished with a cornice constructed of a stucco-coating over a filler material (such as a Styrofoam-based system like Dryvit). There is a one-story projecting bay, finished at the top with a stone-coped gable-shaped parapet. Below the coping, in the gabled form, is ornamentation in the form of a set of three Latin crosses, below which is an inset entrance under a segmental arch. The façade was replaced in 1997, but the overall form of the building dates to 1960. The 1992 Sanborn map indicates that it was a Police Station at that time, and that it had been constructed in 1960 with 12-inch concrete block walls, a concrete floor, and a metal deck roof on steel trusses.

November 2006: This two-story, three-bay, side-gabled house appears to have been built as a vernacular design during the Greek Revival era (one of the oldest houses in this part of the district), but has Colonial Revival style finishes from the early- to mid-twentieth century. The house is clad in beaded weatherboard. The windows are double-hung 1/1 wood sashes flanked by decorative louvered shutters that are apparently made of wood and have begun to fall apart. The roof has standing seam metal roofing with a dark coating (such as bituminous tar) and many small patches of rust, and there are two interior end chimneys constructed of brick, one at the north end with a corbelled cap and one at the south end of the crest of the roof without a corbelled cap. The door surround at the center bay of the first story has a broken pediment and reeded pilasters. The house sits back from the street about 25 feet. Among a few other plants, the front lawn, which is enclosed by a wood picket fence, contains mature evergreen shrubs, about twelve feet in height and about eight feet in circumference, planted as foundation plantings flanking the front door.

November 2006: This two-story, two-bay Italianate-style frame house is half of a pair of twins built together in what appear to have been matching designs, but distinguished over time by a variety of superficial changes. The other half of the pair is 329½ North Henry Street. The pair shares a continuous false mansard supported on a wood cornice with brackets and dentils, although there is a slight difference in the size of the dentils and in the roofing material. At this address, the false mansard has asphalt shingles and the dentils are larger and spaced at a wider interval. The house is clad in German siding. The foundation is not visible. The windows are double-hung 6/6 wood sashes, and the window openings are flanked by decorative shutters that appear to consist mainly of three vertical boards each. The door has a recently added surround with fluted pilasters, bulls-eye corner blocks, and a steeply pitched pediment that looks truncated due to the absence of a frieze. The only step up at the doorway is the threshold itself.

*Primary Resource Information:* **Store, Stories 1.00, Style: Commercial Style, 1958**

November 2006: This one-story, three-bay commercial building, typical of some of the last buildings built in the district before the end of the period of significance, has a flat roof concealed behind a parapet, an angled corner entry accessed by three low concrete steps, fixed single-pane façade windows in wood frames as well as steel casement windows in the side elevation (along Princess Street), two downspout leaders with collector boxes at the baseline of the parapet in the side elevation, and brick walls laid in American bond with rowlock sills and concealed lintels at the window openings. Minor settling and shifting has caused stress cracks that reveal the location of the concealed steel lintels and weak lines in the brick construction at the parapet above the angled entrance. The 1992 Sanborn map indicates that it was a battery repair shop, built in 1958 of non-combustible construction with a concrete floor, metal deck roof, and non-combustible brick walls.

*Primary Resource Information:* **Office/Office Building, Stories 2.50, Style: Post Modern, ca 1980**

November 2006: This Post Modern style office building has brick walls laid in stretcher bond and some details that are inspired by the Colonial Revival and Second Empire styles despite their modern appearance in this design. The foundation is brick, laid in stretcher bond. The windows are one-light casements arranged either two or three wide in each opening, with a nearly square transom above each casement in the first and second story openings. The roof has the form of a false mansard, although it looks distinctly different from other examples in the district due to its proportions and the way it is framed by brick fire walls and set back at what appears to be a small parapet at the top of the brick façade. The false mansard has standing seam metal roofing and two semi-circular round-topped dormers, each with three casements. Each window opening below the roof has a rowlock sill with a segment of soldier bricks directly below the rowlock detail. Across the façade and side elevations, a soldier brick belt course is located in line with the tops of the window openings to serve in place of lintels. At the top of the façade, in place of a cornice, are two belt courses of brick, the lower one a soldier course, above which is a sailor course. The fire walls at the ends of the false mansard appear to be three-wives wide and have a prominent coping detail. Although the building has a North Henry Street address, there is no entrance in the façade; its main entrance is apparently in the side elevation, which faces toward a small parking area associated with the building. The 1992 Sanborn map indicates that the structural system is actually concrete block with brick facing.

November 2006: This two-story, three-bay, Colonial Revival style house is half of a pair of twins, constructed as one unified composition, the other half being 406 North Henry Street. It has brick walls laid in American bond. The foundation is not visible. The windows are 6/6 double-hung vinyl replacements with decorative shutters. The window openings have rowlock sills and concealed lintels. The roof is concealed behind a parapet with a wide band of light-colored coping. The parapet is decoratively treated, across both twin houses together, with a wood cornice at the second story ceiling line above which two rakes of the same profile as the cornice rise on angles to form a triangular pediment shape with the brick surface, a single plane behind the triangular decorative detail, also serving as the tympanum. The door surround consists of fluted pilasters and a deep overhanging door hood on brackets. The door is accessed by two concrete steps. On the south side of the house is a parged wall. The 1992 Sanborn map indicates that the actual structural system is cinderblock with brick facing. It also indicates that this twin house may have been, together with the neighboring row of nine addresses to the north (410-426 North Henry Street), and possibly the three houses that form the row on the next parcels to the north of that (428-432 North Henry), part of a related development, although only the nine-unit row at the center had been built by 1941.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1895**

November 2006: This two-story, three-bay, frame, Italianate style house is clad in German siding. The foundation is solid in form and constructed of brick laid in stretcher bond. The windows are 6/6 double-hung wood. The surface of the shed roof is not visible; the front shed roof, which is hidden behind a parapet, meets the perpendicular shed-roofed form of a narrower rear wing, forming a diagonal valley. At the top of the façade is a wood parapet (or false front) that rises slightly above the roof form to an Italianate-style wood cornice on brackets. The window openings have minimal wood surrounds. There are metal grates on the first story window openings. The door twentieth century wood surround consisting of a mitered brick-molding profile crowned with a pediment. The entrance is accessed by two semi-circular, concentric brick steps that serve in place of a stoop. Two vacant lots to the side are paved as parking and enclosed with a wood picket fence with a scalloped pattern at the top. The parking appears to be associated with another building nearby, but is also accesses the house's side entrance.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1940**

November 2006: This two-story, two-bay, Colonial Revival style brick row house is the sixth address in from the south in a row of nine matching houses, 410-426 North Henry. It has a slate-clad false mansard (or false-side-gable) roof form, identical to those found at the other eight addresses, but separated at each house by fire walls that rise from the tops of the common walls (and end walls) to frame each unit. The brick walls are laid in American bond. The foundation is not visible. The windows are paired 3-light steel casements below a transom in each opening. The window openings have rowlock sills, and the entrance is sheltered by a deep, one-bay porch with a concrete floor two steps up from grade, brick columns and piers, and a board-fence-style wood railing. At the southern edge of this unit, a rain leader with a collector box at the top demarcates the line where the common wall between 418 and 420 North Henry is found. The 1992 Sanborn map indicates that the actual structural system is cinderblock with brick facing. This row appears to have been built (by 1941) shortly before the neighboring pair of twin houses to the south (404-406 North Henry Street), and possibly also the three houses that occupy the next parcels to the north (428-432 North Henry), which may have been related developments. The row sits back from the street with fenced-in garden areas, one of the best examples of a garden apartment development of its kind in the district.

November 2006: This one-story Modern Movement style office building (a veterinary hospital) has a free-form plan with angled walls, contrasting shed and flat roof forms, flat wall surfaces in some areas that contrast with other walls that are divided into segments by closely spaced pilasters, and large and small panes of floor-to-ceiling smoked glass as windows. The exterior brick surfaces of the walls are laid in stretcher bond over a concrete block structure. The windows are fixed. The roof is flat and concealed behind a low parapet except for a small shed-roofed area that rises from the center of the building and has standing seam metal roofing. There is an oval light of decorative glass in an ornate, multi-faceted quatrefoil pattern with leaded coming in the entrance door, which also has decorative panels with applied moldings. The door is out of keeping with the rest of the building and may be a recent replacement. The 1992 Sanborn map has the following information: "N.C. [Non-combustible construction] - 1965-1985 [apparently two dates of construction] (C.B.) [concrete block]".

**442 Henry Street North      100-0133-0496**  
*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Commercial Style, ca 1955**

November 2006: This modern commercial building, constructed as a gas station shortly before the end of the period of significance, is a good example of the last wave of construction in the district before 1959. It consists of a large, cubic form, with a flat roof concealed behind a parapet and brick walls laid in American bond, set back behind an open paved area that occupies half of the building lot. Rising above the roof is a flue that serves as the building's chimney. The foundation is not visible. The windows are fixed. The northern one-third and southern one-third of the building contain garage door bays, with a storefront area at the center between them. The garage door bays, two north of the storefront and two south of it, are very tall openings with roll-down doors. The storefront is framed out with several large, fixed panes of plate glass in a framework of mill-finished aluminum with an entrance door near the center. The total storefront opening is only about 60% as tall as the garage bay doors, with a quarter-barrel-shaped plastic awning in leftover the space above the storefront that has the word "SERVICE" on it. Although the garage doors are about 15 feet tall, the blank area of the façade wall and parapet above them rises about 10 more feet. A decorative sign band with the words "SERVICE CENTER" was applied across the building in the lower third of this blank area, probably in the 1980s. In the paved area in front of the building, a large canopy with back-lit plastic signage on its edges was erected on two steel columns over two sets of gas pumps, probably also in the 1980s. The graphics and design of the canopy, the sign band, and the plastic awning are characteristic of recent design trends in gas stations located along highways. However, behind these applied alterations, the brick building remains largely as it was when constructed in the 1950s, a typical example of its kind at a time when this historic district was experiencing the initial impact of highway travel along the Jefferson Highway (Rt. 1), commercial development at the core of the district as a result, and the design influence of the Modern Movement, blended, as it was the case throughout Alexandria, with brick construction and some characteristics of the Colonial Revival.

November 2006: Although initially constructed by 1958, when it served as a restaurant, this building has recently been completely remodeled if not completely reconstructed, including the application of an exterior skin of stucco (a stucco-coating over a filler material, such as a Styrofoam-based system like Dryvit), encrusting the entire exterior with a Post-Modern style interpretation of Moderne style and Art Deco style motifs. A cubic, one-story form, presumably brick under the stucco, it has fixed, single-pane windows that are paired in openings of approximately six feet tall by five feet wide. A deep, low-angled fabric awning has been placed over each window. At the entrance, there is a one-story, one-bay porch-like canopy with metal rod supports. The remaining areas of the façade, such as the parapet above the windows and the spaces between openings, have nested patterns of grids and panels, some imitating a familiar architectural motif that resembles both the mullions and transom-bar pattern of "Chicago Commercial style" windows and the rice paper screens used in traditional Chinese and Japanese buildings. The building was remodeled this way to serve as the headquarters for the construction job site across the street in which a large new apartment and retail complex called the Monarch is under construction.

flanking wings. The foundation is poured-in-place concrete. There is a one-story, three-bay, enclosed front vestibule or porch. It has distinctive Moderne style characteristics, with an emphasis on the outer edge of the porch (or canopy) roof, which has five thin, horizontal bands of chrome (or a shiny chrome-like metal), alternating with black lines. The enclosed part of the porch, beneath this canopy, looks as if it may have originally been open. Semi-hexagonal in plan, it is accessed by monumental stairs that rise two steps up to the enclosure, even at areas away from the door. The enclosure has strong vertical lines in the porch-post-like mullions which hold in place narrow, vertical segments of plate glass above a solid wood balustrade. Throughout the rest of the building, the windows are 2/2 double-hung horizontal steel with stone sills. The roof is flat, concealed behind a parapet, with an interior end chimney. The building is one of the district's most striking examples of the Moderne style, with an architectural effect accomplished mostly by way of the horizontal lines of the canopy at the centered doorway, further emphasized by the bold walls of the stepped-down wings, in an otherwise plain brick composition. The 1941 Sanborn map indicates that the actual structural system is a combination of non-combustible wall materials, both structural clay tile and concrete with an exterior brick facing, a concrete floor, and a steel roof deck on steel joists.

**615 Henry Street North      100-0133-0502**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1995**

November 2006: This two-story, two-bay, shed-roofed Italianate style frame house is clad in composition siding. The foundation is new brick laid in stretcher bond. The windows are 6/6 double-hung wood. At the top of the façade, also the highpoint of the shed roof, is a plain wood cornice with a deep and bold profile but no brackets. Door and window surrounds are minimal strips of mitered wood. The entrance door has a three-light transom and is accessed by a single brick step, large enough that a plant has been placed in a pot next to the door. The 1992 Sanborn map indicates that a fire-damaged, vacant, frame dwelling occupied the site at that time. The present building is an all-new exterior, but it follows the form and nearly follows the footprint of what was there in 1992 (there was a narrow gap between this house and 617 North Henry Street at that time), suggesting that it may be possible that some elements of the older building were incorporated into the current design, but not enough so for it to be counted as a contributing resource.

**617 Henry Street North      100-0133-0503**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1990**

November 2006: This two-story, two-bay Colonial Revival style frame house has a brick veneer façade laid in stretcher bond. The foundation is not visible. The windows are 1/1 double-hung vinyl, paired in the bay next to the entrance, with rowlock sills, decorative shutters, and concealed lintels. The roof is a false side gable with asphalt shingles. The entrance door has a vinyl door surround applied over the brick so that the edge of the brick shows at the opening. The doorway is accessed by a single brick and concrete step which is wider than the doorway and deep enough to have a doormat. The 1992 Sanborn map indicates that a vacant, frame dwelling occupied the site at that time. It appears from the map to have been a continuation of the row formed by the three row houses just north of this parcel. The present building is an all-new building, vaguely similar in form and footprint to what was there in 1992, but set back about four feet from where the earlier house was.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay Italianate style frame house has a brick veneer façade laid in stretcher bond. The house is part of a three-unit row, with a continuous false mansard, which was completely refaced in brick about 1980 to make the three look more similar to one another. The alteration hides subtle differences, such as the fact that the window openings of 619 North Henry are taller than those at the other two addresses. The foundation is not visible. In adding the brick façade, an unusual detail was used around the window and door openings to create projecting surrounds consisting of vertical lines of projecting headers at the sides of the windows and door, projecting rowlock sills, and projecting lintel details that mimic gauged brick jack-arches, but with a segmental curve along the top edge of the projecting form as found in the first story openings, using a curved sailor course to form the top. The windows are 1/1 double-hung vinyl. The roof is a false mansard with asphalt shingles.

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: No Style Listed, ca 1940**

November 2006: This four-bay commercial building has an applied false mansard (a recent modification built onto the face of an older parapet) with asphalt shingles. Behind this is a parapet concealing a flat roof. Across the façade are 10-light commercial windows punctuating the front wall of a ca. 1980s front addition. The windows have one large fixed pane in the upper half and four smaller fixed panes below, in mill-finished aluminum framing, with two side-by-side, five-pane units in each window opening. The building was built in several stages, and later additions now completely obscure the original appearance. The middle section of the building is the older portion, but there are no remaining distinguishing characteristics. The building is constructed of concrete block (some sections with brick facing) which has been uniformly painted gray. The foundation is not visible.

**722 Henry Street North      100-0133-0512**

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Colonial Revival, ca 1955**

November 2006: This one-story, three-bay, brick, Colonial Revival style commercial building has brick walls laid in American bond with raked joints. At the top of the façade is a parapet that conceals the form and material of the flat roof. The foundation is not visible. The windows are fixed glass in wood frames, two lights per opening in the two larger façade openings. The center opening is narrow, apparently a remnant of a former doorway that was re-worked into a window. The window openings have stone sills. At the top of the façade, across the face of the parapet, is some decorative brick work, with a large brick diaper that may have originally served as a sign band area. The parapet and brick work are almost completely covered by a large fabric awning that has been added recently to serve as a sign for the retail store that currently occupies the building. The building's entrance was also recently moved to the side, where access is by way of an adjoining paved area that is enclosed with chain link fencing and serves as a display area

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: No Style Listed, ca 1960**

November 2006: This four-bay, one-story, ell-plan, concrete block and brick commercial garage building has brick walls laid in American bond in the front section and concrete construction in the rear ell. The foundation is not visible. The windows are fixed in aluminum frames. The roof is flat, concealed behind a parapet, with a stove flue chimney. Across the front parapet, in the building's brick part of the façade, is a wood sign band and a security fence at the perimeter. The building is utilitarian in character and all the construction details date from after the period of significance.

**727 Henry Street North      100-0133-0510**

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Colonial Revival, ca 1925**

November 2006: This large, three-bay, one-story, brick commercial building was once used as a warehouse for a milk distribution business. The brick walls are laid in American bond. The building has a central garage bay opening in the façade, flanked by two large window openings that are covered with dense expanded metal grates that make it impossible to see any window details apart from the rowlock sills. Above the garage door and windows is a tall brick parapet that extends across the façade and wraps around the corners for a few feet, then steps down to a lower height across the rest of the length of each side elevation. The parapet conceals the roof form and material. At the top and bottom of the parapet are belt courses of brick. The parapet has brick pilasters defining a natural sign band area that is now painted solid white. Situated at the corner of North Henry Street and Madison Street, the building sits back from the North Henry Street sidewalk, leaving a paved area about eight to ten feet wide now used as parking, while on the Madison Street side the building abuts the sidewalk.

**728 Henry Street North      100-0133-0513**

*Primary Resource Information:* **Restaurant, Stories 1.00, Style: No Style Listed, ca 1950**

November 2006: This large, one-story, three-bay, brick commercial building has a nearly flat shed roof. It currently contains a restaurant. Over an older commercial storefront on the North Henry Street side, it has several layers of remodeled details including stucco, wood facing, and an awning. On the side elevation, along Madison Street, projecting round-topped brick arches have been constructed around existing twelve-light steel casement windows to give the building the appearance of a Mexican restaurant. The façade has two entries, one at the side of a storefront window and under the awning, and the other, a non-descript door near the building's corner. The Sanborn map indicates that the building was originally constructed of structural clay tile with some brick facing.

**840 Henry Street North                    100-0133-1327**

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Modern Movement, ca 1950**

November 2006: This large, one-story, twenty-six bay, Modern Movement style commercial building has a “C”-shaped plan wrapping around a paved parking area. The building and paved area fills an entire city block in an area where the alignment of streets allows this block to be slightly larger than all the others. The building is constructed of brick laid in American bond. The windows are fixed glass in aluminum frames, with large, rectangular window openings each of which contains four to six lights. A tall chimney-like column of random-coursed stone appears as an ornamental and accent feature at the building’s southeast corner. The material consists of narrow bands of sedimentary stone laid in random courses with strong horizontal lines created by using stone that was cut horizontally making the joints uniform in width, while the vertical joints were made to blend in with the rough vertical surface left on the exposed face of each piece. The roof is flat, concealed behind a parapet. A distinctive characteristic of the building’s modern architectural style is the use of a band of protruding stone or cast concrete placed as a frame around groups of windows and doors. The “frame” is continuous at the head and sill lines of the main window openings, and the doors and some recessed entrance bays are designed so that they interrupt the bottom line of the frame. The surface of the protruding frame material is beveled to resemble a picture frame, and the bevels meet in a way that mimics mitered corners even though the actual masonry joints (appearing just next to each corner) are not angled. Each one of the main entry bays is recessed by at least two feet, creating an effect in some portions of the façade similar to that of a row of modern storefronts as found in mid-twentieth century strip malls.

**Section 7 Page 117**

November 2006: This four-bay aluminum-sided building appears to have originally been two buildings, one which was probably two stories in height, the other being a tall one-story building, although the siding hides most of the building's original appearance, and windows and doors are now found only in the bottom seven feet of the façade. Based on a limited area that is not covered by siding, it appears that the building's structural system consists, for the most part, of concrete block bearing wall construction. The taller section (the easternmost two bays) has a stepped parapet. While this taller section has a window and a door that are counted as two of the building's four bays, it is less than one third of the total width of the building. The remaining section of the building has a straight parapet, so that no part of the roof is visible from the street. The building has a 1/1 double-hung wood sash window in the taller narrower section, as well as a flush door with a metal grate over it. In the remaining section, there is a door with a nine-light vision panel, also with a metal grate, and next to it is a horizontal window that consists of two side-by-side fixed panes of glass. The horizontal window is covered by a security screen made of expanded metal. Most of the original areas where there would have been window opening are hidden by the siding. There is a built-in air condition unit on the front. This area occupied by this building is shown as vacant on the 1941 Sanborn map.

*Primary Resource Information:* **Commercial Building, Stories 3.00, Style: Utilitarian, ca 1925**

November 2006: This four-bay building, with sections of varying height between one and four stories, is actually a row of three adjoining sections constructed as part of an industrial facility, the location of a milk distribution warehouse in the 1950s. The tallest part of the building, the part clad in metal, was more recently the location of an iron works, according to the 1992 Sanborn map. The row consists of a three-story, two-bay, gable-roofed western section clad in corrugated metal, with two one-bay additions to the east of it constructed of concrete block. The center section and the easternmost section have flat or shed roofs concealed by parapets. The easternmost section is narrow (about 15 feet wide) and has a single man door in the façade. The center section has a tall, roll-up, garage door. The metal-faced section has two large doors, the lower one being a garage door, and the upper one being a pair of metal doors with a projecting steel I-beam with a pulley for hoisting materials into the upper stories. The other bay of the metal-clad building has a first story man door and a steel casement window in each of two upper stories. All three section are painted gray up to about five feet above grade, and then white above that; the same color scheme continues across the wall of the adjoining building to the west, which is documented separately as 727 North Henry Street. All the parcels in this block of Madison Street were shown as vacant when the 1921 Sanborn map was prepared, and most were in place by the time the 1941 map was prepared.

It is part of a two-block area known as Samuel Madden Homes, adjoining the five-block James Bland public housing project. The Samuel Madden project is about ten years older and was built in tandem with another section of houses by the same name located several blocks outside the district boundary. The walls are brick laid in American bond. The roof is a side gable with asphalt shingles. The windows are 6/6 double-hung vinyl, paired in a single opening in each story. The entrances are accessed by a two-step concrete stoop with a patio-like, large landing at the top. The entrances are sheltered by a shed-roofed wooden canopy with asphalt shingles.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate/Greek Revival, ca 1850**

November 2006: This two-story, two-bay, side-gabled, frame house was under renovation at the time of survey. Some of the framing has been replaced in the gable ends. The windows were missing at the time of the survey. The exterior is clad in weatherboard siding, and there is a transom over the door. The roof, at the time of the survey, was recently installed standing seam metal. The house is part of a contiguous row of row houses, 813 to 819 Oronoco, some of the more architecturally significant examples of early frame row house construction in the district.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: Originally a corner store building facing North Alfred Street (as indicated on most historic Sanborn maps of this intersection), but now a house, this two-story, three-bay, shed-roofed, frame building has a wood cornice with brackets and dentils at the top of the North Alfred Street facade. The siding is vinyl. The windows are 6/6 wood replacement sashes. There is a large ell on the rear. The form of the building faces North Alfred Street but the entrance has been relocated to Oronoco Street. The absence of an entrance on the Oronoco Street and the wide space between the first and second story windows are apparently the result of closing in what had formerly been a tall storefront that faced North Alfred Street.

*Individual Resource Status:* **Single Dwelling Contributing Total: 1**

**901 Oronoco Street 100-0133-0591**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1990**

November 2006: This two-story, three-bay, shed-roofed brick row house has an inset door with a diamond-pane transom. The house's shed roof design is apparently intended to give it the form of the historic "flounder houses" found in early Alexandria, a kind of house where the shed-roofed rear ell was constructed first and sometimes left without the more finished formal façade appearance of a front section; in this case, the shed roof slopes toward the façade over a centered entrance so that the house resembles a mid-nineteenth century side-gabled three-bay house. The house has wood block lintels, double-hung 1/1 wood sash windows, decorative shutters, and a wood cornice with dentils. The entrance is recessed in a small vestibule behind the transom, and it is accessed by way of two brick steps which are part of a brick planter that occupies the area immediately in front of the remaining façade. The planter is four courses tall plus a rowlock/sailor course that serves as a cap. The 1992 Sanborn map indicates that the actual structural system is concrete block bearing wall construction with brick facing (one withe of brick laid in stretcher-bond).

=====  
windows are wood 1/1 double-hung sashes. Facing Alfred Street, at the corner, is a small, frame, two-story accretion which is smaller in the second story than it is in the first. Next to it is a pair of French doors leading out onto a wood deck with a lattice screen. The deck, French doors, and screen are barely visible behind a brick and wood fence and landscaping that together encircles the parcel on this side. The 1992 Sanborn map indicates that it is concrete block with brick facing (although it is possible, judging from the footprint, that the map is showing an earlier building before this one was erected).

November 2006: This two-story, three-bay, Colonial Revival style brick house has soldier course brick lintels and a parapet concealing the roof. On the face of the parapet is a rowlock detail of two parallel rows, creating the impression of brick diapering. There is also a soldier brick course at the water table. The windows are double-hung wood 6/6 sashes. The windows have stone lintels and stone sills. Flower boxes have been attached at the second story sills. The house has two front doors, one in each of the outer two bays. At the center of the lintel over each entrance door is a decorative keystone motif making the lintel appear like a three-part jack arch. Each door is accessed by a low pair of concrete steps in place of a stoop.

November 2006: This two-and-a-half story, three-bay, Italianate style, frame town house was under renovation at the time of survey. The house has a wood cornice with brackets and dentils. Over the door is a transom. The house has a tall, nearly pyramidal mansard roof that appears to be the result of adding a roof form to create a half story above the second story as an extension of an older false mansard. The front face of the extended roof incorporates the older false mansard form into the same plane. In the face of the roof form is a gabled dormer with a double-hung 6/6 vinyl window. The first and second story windows are double-hung 2/2 wood sashes with horizontal panes. The entrance door is accessed by a very small, two-step concrete stoop. The roof form modification probably dates to ca.1980.

November 2006: This two-story, two-bay, Italianate style frame row house is clad in wood German siding. To the side of the entrance bay is a narrow, two-story, projecting bay which is rectangular in plan and deep enough to have a standard size window to each side. At the top of the façade is a cornice with brackets and dentils supporting a small false mansard. A pyramidal roof form with asphalt shingles rises above the projecting bay. The windows are double-hung 2/2 wood and the surrounds are wood with peaked lintels some of which retain their original drip moldings. At the entrance door is a surround with a door hood on brackets and dentils and a transom. The door is accessed by a single concrete step in place of a stoop.

**Section 7 Page 127**

early "flounder houses," but is also very modern in its plain, straightforward design. Although the house's form alludes to a historic Alexandria prototype, and although the house has traditionally proportioned window openings, lintels, and sills, the design is still reflective of the Modern Movement in its materials, austerity, and character. It has double-hung 6/6 wood sash windows, wood block lintels and rowlock sills, and a very plain board at the edge of the roof with no overhang at the eaves of the half-gable-end façade wall. The door is accessed by a small, single step in place of a stoop.

November 2006: This two-story, three-bay, shed-roofed, Italianate style, frame house has a wood cornice with brackets and dentils at the top of the façade. The windows are double-hung 6/6 wood sashes with decorative window shutters, and the surround at the entrance door as a hood with brackets and dentils but a solid frieze in place of a transom. The door is accessed by a set of four brick steps in place of a stoop. The house sits back about four feet from its neighbors with a wood picket fence at the sidewalk and a second wood fence, which is solid, in line with the façade enclosing a narrow side yard. Large hedges in the space between the picket fence and the façade block any view of the foundation. The house is attached to its neighbor to the west, 1015 Oronoco Street (the roof of 1013 appears to slope to the side, away from the adjoining house).

*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Colonial Revival, ca 1890**

November 2006: This two-and-a-half story, three-bay, side-gabled, Colonial Revival style, frame townhouse was originally similar to 1017 Oronoco, according to the building outline shown on the 1958 Sanborn map. At the entrance door, it has sidelights and a transom. At the top of the façade is a wood cornice with dentils. In the front face of the roof are two gabled dormers that are not original. The houses windows are 1/1 wood sash windows, with upper sashes that fill about 40% of each window opening and taller lower sashes, filling the remaining 60%. The windows have wide surrounds that are the same on the top, bottom, and sides of each opening. There is a mitered backband on each side of the surround at each opening duplicating the effect of the ca.1920 interior trim type known as "sanitary casing." The siding is vinyl in very narrow strips that duplicate the effect of wood siding sometimes used on Colonial Revival style buildings around 1900. The entrance door is accessed by a three-step brick stoop with a wrought metal railing to each side. The foundation is solid masonry that has been parged.

November 2006: This two-story, three-bay, Colonial Revival style, frame town house has a projecting bay with a pyramidal roof that steps out from a false mansard. The pyramidal roof has a louvered triangular ventilator and the pyramidal form is crowned with decorative cresting made of pressed sheet metal in a fleur-de-lis design. There is a transom over the door, but the entrance is otherwise remarkably plain. The door is accessed by a modest set of two concrete steps in place of a stoop. The windows on the first story are Palladian arrangement of three double-hung 1/1 windows, the middle window being wider than the flanking ones, with a transom above each sash consisting of fixed diagonal lights with colored glass. The second story windows are similar, except that the transoms lights consist of fixed sashes of 9-21 small square panes of colored glass. The window in the bay over the entrance is double-hung (without the window transom) and has its panes in a 24/1 arrangement.

Primary Resource Information: **Store, Stories 1.00, Style: Modern Movement, ca 1952**

November 2006: This is a flat-roofed commercial building, one bay wide, with a brick facade and concrete block on the side elevations. It has inset brick diapering in the face of the parapet that conceals the roof, an awning over the window, and a side entrance with an awning and a modern two-leaf door. The windows are fixed glass and both windows and doors have mill-finished aluminum frames. Shrubbery hides part of the façade. As is typical of many modern buildings constructed in the last decade of the period of significance, especially those built for commercial uses, it is a large cubic building with no other identifiable architectural features.

**1122 Oronoco Street      100-0133-0630**  
Primary Resource Information: **Church/Chapel, Stories 1.00, Style: Commercial Style, ca 1950**

November 2006: This three-bay, flat-roofed, brick building now serving as a church was originally a commercial building (the 1958 Sanborn map appears to indicate that it was a store at that time), although it has the form and appearance of a residence. The roof is concealed behind a metal-capped parapet. A one-story flat-roofed addition, built prior to 1958 (but it may have been a porch at that time), projects from the front of the original building. The windows are a combination of multi-panes double-hung sashes in the side elevations and grids of 12-16 panes each of fixed glass in a wood framework in each area of the flat-roofed addition. The current stoop-like porch that projects in front of the addition is sheltered by a metal awning that is supported on metal rods. The windows have painted pointed arches above them, with a strip of wood defining the upper side of the triangular shape, in an attempt to give the building a church-like appearance. The entrance accessed by a brick stoop of four or five risers. The porch steps are masked by a brick half wall serving as a balustrade.

November 2006: This two-story, three-bay, Colonial Revival style, brick row house has walls laid in American bond and 6/6 wood sash windows with false muntins and rowlock sills. The façade rises in a single plane from a raised basement at grade to form a parapet at the top of the facade concealing the roof. The parapet, which has a metal cap, curves or steps upward to form a pier at each end. At the base of the parapet, extending across the façade from pier to pier, is a panel of diapered brick. The front door is accessed by an uncovered five-step, concrete stoop with a large patio-like landing at the top, about four by eight feet in area, surrounded by a wrought metal railing. The door has a concealed lintel and no decorative surround. The house is a twin with 1202 Oronoco Street, and it is similar to the other houses in the seven-unit row. Together with a six-unit row further west, these houses form the entire southern side of the 1200 block of this street. The rows closely resemble numerous other rows in the part of the neighborhood west of Fayette Street and south of Wythe Street. The two rows in this block sit back from the sidewalk about 40 feet, and 1200 Oronoco, unlike its neighbors, has a chain link fence defining a front and side yard (the house, which occupies a corner site, also sits back about 20 feet from Fayette Street, the cross street). There is also a large street tree in front of the unit. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing.

November 2006: This two-story, three-bay, Colonial Revival style, brick row house has walls laid in American bond and 6/6 wood sash windows with false muntins and rowlock sills. The façade rises in a single plane from a raised basement at grade to form a parapet at the top of the facade concealing the roof. The parapet, which has a metal cap, curves or steps upward to form a pier at each end. At the base of the parapet, extending across the façade from pier to pier, is a panel of diapered brick. At the lintel line of the second story windows, two-to-three courses of brick have been repointed so that they no longer match the rest of the façade. This scar may be evidence of the removal of a cornice or some kind of awnings (as found at 1210 Oronoco Street). The front door is accessed by a five-step brick stoop with a large patio-like landing at the top surrounded by a wrought metal railing. The entrance door has a concealed lintel and no decorative surround. The house is a twin with 1210 Oronoco Street, as well as 1200-1202 Oronoco, the two addresses at the eastern end of the row. It is similar to the other houses in the seven-unit row. Together with a six-unit row further west, these houses form the entire southern side of the 1200 block of this street. The rows closely resemble numerous other rows in the part of the neighborhood west of Fayette Street and south of Wythe Street. The two rows in this block sit back from the sidewalk about 40 feet. The front lawn contains a large hedge, planted as a foundation planting at the edge of the stoop and in front of the first story windows. It has grown to the height of the window sills. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing.

November 2006: This two-story, three-bay, Colonial Revival style, brick row house has walls laid in American bond and 1/1 vinyl windows with rowlock sills. The façade rises in a single plane from a raised basement at grade to form a parapet at the top of the facade concealing the roof. The parapet has a metal cap. In the face of the parapet, there are several diamond-shaped panels of diapered brick and other decorative brickwork. The front door is accessed by a five-step, concrete stoop/porch with a large landing at the top, about four by eight feet in area, surrounded by a wrought metal railing and sheltered by a metal awning supported on metal rods. The door has a concealed lintel and no decorative surround. The house is a twin with 1218 Oronoco Street, and it is similar to the other houses in the six-unit row. Together with a seven-unit row further east, these houses form the entire southern side of the 1200 block of this street. The rows closely resemble numerous other rows in the part of the neighborhood west of Fayette Street and south of Wythe Street. The two rows in this block sit back from the sidewalk about 40 feet, and 1214-1216 Oronoco has a chain link fence defining a front yard. There is also a large conifer tree in the space between this house and 1212 Oronoco Streets (both are end units, and the tree is located between the two rows). The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing.

*Primary Resource Information:* **Multiple dwelling, Stories 2.00, Style: Colonial Revival, ca 1940**

November 2006: This seven-bay multiple dwelling has been recently renovated. The design of the building resembles that of a school, with a centered entrance, flanked by large windows, and with two bays in a simpler design to either side of the façade. The building, which was constructed between 1941 and 1958 (based on Sanborn maps), has apparently always been an apartment complex. The new entrance details are Art Deco in style, largely achieved by adding stepped bands of stucco over the earlier stone or brick details. All the windows have been replaced with paired mill-finished aluminum casements; there are lower casements in the larger openings that appears to be mounted as hopper or awning windows. The larger windows have four-light casements above and two-light casements or awning sashes below. The outer two bays to either side of the entrance are windows that appear to be a little too small for the design. They have each three-light mill-finished aluminum casements. The bottom story is a raised basement clad in stucco with horizontal relief marks to create a rustication pattern. At the top of the façade, above the entrance, the stucco pattern rises to form a layered keystone.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1940**

November 2006: This two-story, three-bay, Colonial Revival style, brick row house has walls laid in American bond and 6/6 wood sash windows with false muntins and rowlock sills. The façade rises in a single plane from a raised basement at grade to a false side-gable roof form (essentially the same as a false mansard, but designed at a lower pitch to resemble the front face of a side-gabled roof form). The false side-gable has exposed rafter ends, asphalt shingles, and a brick firewall piercing the roof at the location of the house's west party wall. The front door is accessed by a five-step concrete stoop/porch with a large landing at the top, about four by eight feet in area, surrounded by a wrought metal railing and sheltered by a metal awning supported on metal rods. Beneath the porch floor is a screen of latticework. The door has a concealed lintel and no decorative surround. The house is a twin with 1222 Oronoco Street, and it is similar to the other houses in the six-unit row. Together with a seven-unit row further east, these houses form the entire southern side of the 1200 block of this street. The rows closely resemble numerous other rows in the part of the neighborhood west of Fayette Street and south of Wythe Street. The two rows in this block sit back from the sidewalk about 40 feet, and 1220 Oronoco has a chain link fence defining a front yard. There is also a hedge at the edge of the stoop and a street tree beyond the fence in front of this house. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing.

November 2006: This two-story, two-bay, Colonial Revival style brick row house is the easternmost of a row of five matching houses. It has walls laid in American bond and a combination of two kinds of vinyl replacement windows: a large, tripartite vinyl slider picture window unit (a fixed middle casement and flanking one-light sliding sidelights) in the first story and small 1/1 sashes in the upper story. The window openings have soldier brick lintels and rowlock sills. The walls rise in a single plane from grade to form a plain parapet with a metal coping that conceals the roof. The entrance door has a pedimented door surround with fluted pilasters and a metal security grate on the screen door. The row sits back from the curb line about 30 feet, and this unit has a front and side yard enclosed by chain link fencing and a hedge. There is a street tree in front of the house. This row was built shortly after the 1958 Sanborn map was prepared, and thus it falls just beyond the district's period of significance.

November 2006: This two-story, two-bay, Colonial Revival style brick row house is the easternmost address in a row of three matching units. The house is low to the ground, probably slab-on-grade construction. It has walls laid in American bond that rise in a single plane from grade to form a parapet at the top of the wall that conceals the roof. The windows are double-hung 1/1 wood sashes with soldier brick lintels and convex curved metal awnings. There is a rowlock brick belt course at the line of the second story window sills and a second one at the base of the parapet, passing over the soldier-course lintels of the window openings. The entrance door has a surround with fluted pilasters, the top of which is obscured by a metal awning that matches those at the windows. The door is accessed by a single concrete step. The row sits back from the street about 30 feet and the front yard is surrounded by a chain link fence. As this is the end unit, there is also a small side yard also enclosed by the fence. A decorative urn is in a planting area in the front yard of the house. There is also a street tree at the curb. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing. The house appears on the 1958 Sanborn map, but this section of Oronoco Street was shown as vacant on the 1941 map even though the neighboring houses on the perpendicular streets had already been built.

November 2006: This two-story, two-bay, Colonial Revival style brick row house is the fifth house in from the east, and thus the westernmost in a row of five matching houses. It has walls laid in American bond and double-hung 1/1 vinyl replacement windows with decorative shutters. The windows are paired in a single opening in the first story. The window openings have soldier brick lintels and rowlock sills. The walls rise in a single plane from grade to form a plain parapet with a metal coping that conceals the roof. The entrance door has a pedimented architrave door surround. There is a small segment of wrought metal railing at the step that accesses the front door, but nothing large enough to call a stoop. The row sits back from the curb line about 30 feet, and each unit has a front yard (this is the only house in the row where the yard is not enclosed by chain link fencing, although there is a wooden privacy fence in line with the house's facade enclosing the side yard). There is a tree in the middle of the front yard and also street tree in front of the house at the corner of the property. This row was built shortly after the 1958 Sanborn map was prepared, and thus it falls just beyond the district's period of significance.

November 2006: This two-story, two-bay, Colonial Revival style brick row house is the center address in a row of three matching units. The house is low to the ground, probably slab-on-grade construction. It has walls laid in American bond that rise in a single plane from grade to form a parapet at the top of the wall that conceals the roof. The windows are double-hung 6/6 vinyl replacement units with soldier brick lintels at the upper story openings. Each of the two upper story windows has a decorative shutter to one side. There is a rowlock brick belt course at the line of the second story window sills and a second one at the base of the parapet, passing over the soldier-course lintels of the window openings. The entrance door is part of a tripartite ensemble with large sidelights that serve as the only first story windows in the façade. The door ensemble is designed so that it suggests that there may be a porch-like space behind it which it is enclosing. The top of the door ensemble is obscured by a large, convex curved metal awning that matches those found at the neighboring house (1307 Oronoco Street). The door is accessed by a single concrete step. The row sits back from the street about 30 feet and the front yard is surrounded by a wrought metal fence with four prominent brick piers and low sections of brick wall connecting the piers at the bottom of the wrought metal. The piers have pyramidal concrete tops with a concrete finial or pineapple ornament at the apex of each. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing. The house appears on the 1958 Sanborn map, but this section of Oronoco Street was shown as vacant on the 1941 map even though the neighboring houses on the perpendicular streets had already been built.

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1950*

November 2006: This two-story, two-bay Colonial Revival style brick row house is connected to 501 North West Street, as if built as a twin, although the adjoining house now faces the perpendicular street. It has walls laid in American bond and two-pane vinyl slider windows. The window openings have concealed lintels and rowlock sills. Over the entrance door is a projecting, unsupported door hood. The door hood shelters a four-step brick stoop that accesses the door. The stoop has a wrought metal railing. The brick exterior walls rise in a single plane from grade to form a plain parapet that conceals the roof. This house is part of a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. Nearly all the houses that face the north-south streets in this area were built prior to 1941, but this house is the exception. Like the ones that face the east-west streets, it was added later in a simpler rendition of the same basic form. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing. The house appears on the 1958 Sanborn map, but this section of Oronoco Street was shown as vacant on the 1941 map even though the neighboring houses on the perpendicular streets (excepting 501 North West Street) had already been built. The house sits back from the curb line about 20 feet and has a small front and side yard surrounded by a chain link fence. In front of the house is a large ornamental shrub partially obscuring the first story window.

City of Alexandria, Virginia

Section 7 Page 136

November 2006: This two-and-a-half story, three-bay, Federal era brick house is one of the oldest and most high-style early houses within the historic district. It features key elements of Federal era houses, such as stone jack arches with keystones and stone sills at each of the first and second story façade openings. Above the entrance door is a rectangular fan-light transom over a 6-panel door. The door is accessed by a set of three brick steps with no railing, in place of a stoop. The windows are 9/9 wood sashes with louvered working shutters. In the face of the side-gabled roof, which is clad in asphalt shingles, is a gabled dormer with a double-hung 6/6 window. The basement windows have wood grills composed of diagonal elements that resemble the pattern of a Chinese railing. The house has two brick interior end chimneys in the south gable end and one in the north gable end.

November 2006: This two-story, three-bay, side-gabled, brick row house features gauged jack arches over all openings, double-hung 6/6 wood sashes, decorative shutters, wood sills, and an alley passage at the south end of the façade in a round-arched opening. There are also brick dentils at the cornice line at the top of the brick façade. Over the entrance door is a four-light transom, and the door is accessed by a stoop with a metal railing across the front; the wrought ironwork of the railing incorporates circles just below the rail. The house is paired with 118 N. Patrick Street, and it is similar in form and design to it and to 112 and 114 North Patrick Street.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1875**

November 2006: This two-story, two-bay brick house is half of a pair of twins (the other half being 222 Patrick Street) that together represent one of the most ornate Italianate style designs in the district. The house has a highly detailed wood cornice with brackets and dentils. Below the dentils, a second row of ornamentally sawn wood work forms a row of circular shapes and at the ends of this row, the wood detail extends down alongside the brackets, as squared-off scroll-shapes (perhaps an Italianate-style interpretation of, Greek Keys) carved from wood. The windows have decorative wood lintels with keystones and more squared-off scroll shapes. The top edge of each lintel is a curved drip molding line that curves upward toward the two ends of each lintel and also curves upward at the center toward the keystone. Over the decorative lintels of the doorways of the two houses are canopies on brackets; the canopies are crowned with a large Italianate interpretation of a pediment that is shared by the two houses as it extends across the two side-by-side entrance bays. At the ends of the pediment form are leaf-shaped acroteria rising from the top line of the canopy roof form as stone acroteria do on Greek temples. At the top of the façade, above the cornice, is a parapet that rises gently to a peak above the middle bay. The windows are double-hung 6/6 wood sashes. There is a metal grate on the first story window. The entrance door is accessed by a shared brick stoop. The door, which is a twentieth

November 2006: This two-story, two-bay, side-gabled, frame house is a twin with 226 North Patrick Street. It is clad in weatherboard siding that does not appear to be original, and at the top of the façade is a wood cornice with brackets and dentils at the front edge of the shed roof (the roof form of this house differs from that of its twin, 226 North Patrick Street, which is a side-gable with its front edge reworked to resemble the shed-roofed form of 224 North Patrick Street). In each story are triple windows in a single opening, with double-hung 2/2 horizontal wood sash windows at the center of each ensemble flanked by more typical double-hung 1/1 wood sashes. The entrance door appears to be a recent replacement made of metal with a semi-circular vision light that mimics the form of a five-pane fanlight. The door surround is very simple, a mitered piece of twentieth century brick molding, but a decorative wood bar with dentils has been placed over it. The threshold of the door is in line with the surface of the sidewalk.

**301 Patrick Street North      100-0133-0674**  
*Primary Resource Information:* **Church School, Stories 1.00, Style: Art Deco, ca 1941**

November 2006: This three-bay commercial building (now a church educational annex) is one of the best examples of the Art Deco style in the district. The building was constructed of yellow brick in at least two tones, with a small amount of red brick in a two-toned corbelled cornice that has a checkerboard pattern. The parapet steps up above the entrance and at the building's corner piers, with Art Deco ornamentation that is derived from Aztec or other Native American motifs. The walls have buttressed pilasters dividing the two street-facing façades into structural bays. The pilasters are stepped and have stone details at the top of each segment. In three bays of the North Patrick Street façade (as well as one bay of the Queen Street side elevation), as defined by the pilasters, yellow brick was used in an alteration in which plate glass store display units were removed. In the top one-third of each of these three bays, there are smaller ribbon windows with amber glass. The roof form and material are concealed by the brick parapet. The floor of the building is only an inch or two above the top surface of the sidewalk, and there is no evidence at the base of the walls to indicate of what kind of a foundation was used. Segments of stone in the form of three-part thresholds are found at the base of each area of the infill brick where they previously supported the storefront display windows.

*Primary Resource Information:* **Funeral Home, Stories 2.00, Style: Colonial Revival, ca 1910**

November 2006: This two-story, three-bay, brick funeral home building is one of the most ostentatious examples of a commercial building in this style in the district. It is constructed of Norman brick with raked joints. It has an inset plate glass storefront, recessed at the back of a ten-foot-deep inset porch accessed by a three-riser set of monumental stairs. The storefront is a tripartite composition beneath a modified fanlight-type transom in a large elliptical arch, with a centered entrance. The building has string courses of wood, stone, and/or terra cotta in several locations: at the cornice level of the porch opening, forming a string course at the sill level of the second story windows, and forming a cornice above the second story windows. Below the top cornice, a double soldier course of brick serves as lintels for the window openings. Above the cornice is a diapered parapet. The doorway is defined by Tuscan pilasters. The porch is supported by large brick piers, square in plan. Arches at the sides of the porch opening connect the piers to the back wall of the porch. Each of the two piers flanking the porch and entrance has a large Classical Revival style torch light. To the side of the porch, the third bay of the façade is a separate recessed area that contains a tripartite entrance ensemble apparent designed as the entry to a second story residence. The parapet conceals the roof form and materials.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two-story, three-bay, Queen Anne style, freestanding brick town house has a parapet concealing the roof, accentuated by a two-story projecting bay with tall brick piers above its corners resembling exaggerated castellation at the parapet. Between the piers, the cap of the parapet is curved upward at the ends. The exterior surfaces of the walls are brick laid in stretcher bond, from grade where there is an exposed section of raised basement to the top of the parapet where there is a stone or cast concrete cap. The windows are 1/1 double-hung wood sash. The lintels are rock-faced sandstone and the sills are brick and stone belt courses. Both the cornice at the roof and the transom bar over the door transom have dentils. The entrance door has a transom. The door itself is a twentieth century Colonial Revival style replacement with a semi-circular motif of four lights designed to resemble a fanlight within the top third of the door leaf. The door is accessed by a four-step stoop with a wrought metal railing.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1870**

November 2006: This two-story, three-bay, modified Italianate-style frame house has a false mansard and 6/6 double-hung wood windows. As a result of modern siding on the façade and asphalt shingles over the mansard, other ornamental details appear to have been removed and very few distinguishing characteristics remain. The asphalt shingles were placed over the mansard in such a way that even the trim boards of the mansard design are hidden by either uneven flashing (at the top) or overhanging shingles (at the sides and bottom). The door and windows have very plain surrounds. The door is accessed by two modest concrete steps with no railing in place of a stoop.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two story, three-bay, frame house is clad in wood German siding and has a one-story, two-bay, hip-roofed porch with standing seam metal roofing and turned wood posts connected by a plain wood balustrade with square pickets. A metal awning the width of the house extends forward from the front edge of the porch. The windows are double-hung 1/1 wood sashes with decorative shutters. There are sidelights at the entrance door which has a replacement door with a vision light designed to resemble a five-pane fanlight and a screen door with a metal security grate. A shed-roofed ell extends to the rear, and a brick interior end chimney set in the high north wall of the ell can be seen from the front of the house just behind the ridge of the roof. There is a modest-sized hedge in front of the porch.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1960**

November 2006: This two-story, two-bay, freestanding Colonial Revival style, brick town house has a parapet concealing the roof form. There is a brick cornice at the base of the parapet, but the exterior surface of the facade wall is otherwise flush American-bond brick construction in a single plane from grade up to the top of the parapet. The Sanborn maps indicate that the actual structural system is concrete block beneath the brick. The house was built about two years after the 1958 Sanborn map was prepared, and thus falls outside the district's period of significance. The windows are double-hung 8/8 vinyl, and the first story window opening is nearly twice as tall as the second story openings despite the equal number of muntin bars. The entrance is flanked by square Tuscan pilasters and a proportionally tall pediment crowning the doorway. The door, which is accessed by a concrete step, has a metal security grate. Just outside the door, in place of a porch or stoop, is a small concrete patio, essentially a widening of the concrete sidewalk that passes through the center of the front yard from the street to the entrance door.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1877**

November 2006: This three-bay frame house is set back from the street behind a fence and shrouded by trees. It has a linear shed roof, creating the flounder house form found in numerous examples among Alexandria's oldest houses. Houses of this type were usually built as a practical move, constructing the rear ell with the intention of adding a more-formal front section later. This is usually an indication of early construction, and it could be so in this case (the house appears to be shown on the 1877 Hopkins Map of Alexandria), but the building's exterior is now obscured by more modern surface materials, a security fence, and thick plantings around the front and side yard, making it difficult to evaluate from the street. The windows are double-hung 6/6 wood sashes with decorative shutters on the first story on the façade (the front, or North Patrick Street elevation). A two-story, shed-roofed, extension along the south side of the house, enlarging the house's linear shed roof form into a two-story catslide form appears to have been a porch originally which was later enclosed. There is a stucco finish instead of wood siding on the south elevation.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1877**

November 2006: This is one side of a pair of twin houses (the other being 402 Patrick Street) that are among the more plain examples of shed-roofed townhouses built in brick in the district. It is two stories tall and two bays wide and has a wood cornice with brackets (larger paired brackets at the ends, between which are smaller ones that mimic the rhythm of dentils). It has double-hung 2/2 wood sash windows with horizontal panes, wood lintels, rowlock sills, and decorative shutters. There is a metal grate on the first story window. At the base of the façade, across the width of the house, is a brick planter that blocks the bottom eight or nine courses of the brick wall. The floor is apparently only a few inches above the top surface of the sidewalk, as evidenced by the single step up of about four inches at the threshold. The window proportions, lintels, and other aspects of the fenestration and façade design suggest a date just before the Civil War while the cornice and shed roof suggest a date in the 1870s; however, the entire block, on this side of North Patrick Street, is shown as vacant in the 1877 Hopkins Map of Alexandria.

November 2006: This two-story, two-bay frame town house is clad in wood German siding. The windows are double-hung 6/6 wood sashes, with decorative louvered shutters. The first story window openings have flower boxes attached at the sills. The entrance has been moved to the side, apparently in the mid-1980s. At the top of the façade is a wood cornice with brackets and dentils. The window openings appear to have been shortened and the siding would have also been replaced at the same time, as there are no lines to indicate the original larger openings. The basement is solid, constructed of brick, but blocked by an unidentified solid material at the façade. The entrance and other features of the side elevation are not visible due to a solid wood privacy fence, about seven feet tall, enclosing the side yard about two feet back from the sidewalk. There are some small shrubs in front of the fence, and a mature, flowering ornamental tree, almost twice as tall as the house, can be seen in the yard behind the fence.

November 2006: This two-story, two-bay, shed-roofed, semi-attached, brick row house has a two-story projecting bay with chamfered brick corners, a brick cornice, and other ornamental, sculpted, or pressed brick details. The windows are rectangular double-hung 1/1 wood sashes in segmentally arched openings with stone sills. The facade has a non-historic shed-roofed porch with a corrugated metal roof which apparently replaced an earlier design. The foundation is solid, part of the brick construction of the facade wall, although the exact material treatment is not visible. The entrance door has a very short, one-light rectangular transom in an arched opening. The door opening and each window opening has an arch of bricks in soldier orientation, with a protruding curved sailor course above this serving as a drip molding, as is also found at the adjoining house, 412 North Patrick, which is contemporary but has narrower openings and is otherwise of a very different architectural design.

November 2006: This two-story, three-bay, Italianate style, freestanding, frame townhouse is clad in vinyl siding and has a shed roof and a wood cornice with brackets and dentils. At the entrance is an arched door hood with brackets over a transom, one of the more high-style Italianate doorways in the district. The windows are double-hung 2/2 wood sashes with mitered wood surrounds. The doorway is accessed by a three-riser concrete stoop with a metal railing to each side. On a narrow strip of unpaved land across the front, next to the stoop, a row of hedges has been planted as foundation plantings.

November 2006: This is a two-story, three-bay, detached frame town house, clad in asbestos siding, with a false mansard at the center of which is a small, gabled attic dormer (or formerly a dormer-like ventilator) that has been covered with siding. The first and second story windows are double-hung 1/1 wood sashes. The doorway is simple, with no extant transom or trim beyond a thin strip of wood at the jamb; it is accessed by a four-riser brick stoop with a wrought iron railing. A thin band of raised basement is visible below the frame construction; it is of solid construction, brick that has been parged-over.

November 2006: This two-story, two-bay, freestanding, Colonial Revival style, brick townhouse has a modern-era cubic form and a facade that rises to form a brick parapet concealing its roof form. Across the facade is a hipped porch on brick columns with a decorative metal balustrade. The brick columns flare out at the top in a corbelled imitation of capitals. The porch is accessed by three concrete steps with a metal railing to each side. The

windows, which are double-hung 6/6 wood sashes, have soldier brick lintels and rowlock sills. At the base of the cornice, there is a rowlock belt course, and above it, near the center of the parapet, is a second brick belt course of soldier bricks. The 1958 Sanborn map indicates that the actual structural system is cinder block with a facing of brick.

November 2006: This two-story, two-bay frame building clad in weatherboard siding has a false mansard behind the gable of a two-story projecting bay. The gable end of the projecting bay is pedimented and has fish scale wood shingles. The entrance door has a surround with chamfered pilasters, an undersized band of lintel trim (apparently an alteration), a door hood, and a two-light transom. The windows are double-hung 2/2 wood sashes, paired in the projecting bay. The doorway is accessed by a two-riser concrete stoop with low concrete cheek walls. Three courses of the foundation, brick laid in stretcher bond, are visible at the base of the frame construction.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay, freestanding, frame townhouse has an asphalt-shingle-clad false mansard with a concave surface but few other distinguishing historic details. In the first story is a ca.1980 three-sided projecting bay window with a wood shingle roof. There is a double-hung 6/6 window in the center of the bay flanked by double-hung 4/4 windows at the side facets, all with false muntins. The upper story windows are double-hung 1/1 wood sashes. The wood cornice has some dentils at one end, but most of the row appears to be missing. The entrance has a pedimented door twentieth century surround with fluted pilasters and a transom over the door, but the panes in the transom have been painted-over. In place of a stoop, the door is accessed by three brick steps with no handrail. The house sits back from the street about five feet, and the resultant front yard is surrounded by a wood picket fence on a brick retaining wall of about six courses behind which are hedges. A small sapling has been planted as a street tree in front of this house.

November 2006: This two-story, three-bay, concrete block, detached house with a façade of used brick laid in American bond is apparently two apartment units. One unit is apparently in the upper story and the other in the first story, although at first glance the symmetrical façade with an entrance at each outside bay suggests side-by-side units. It has an side-gable roof, clad in asphalt shingles, which is asymmetrical in the side view so that it resembles a false mansard from the front. At the top of the façade wall is a wide eave design that resembles a cornice; it is partly blocked by a modern aluminum "K" gutter. The windows are double-hung 6/6 wood sashes in the second story and a double-hung 1/1 vinyl replacement unit in the center bay of the first story. The window openings have rowlock sills and concealed lintels. In each of the two outer bays is an entrance door accessed by a poured concrete stoop, about four risers high, with a wrought iron railing at each side. The exposed area of the foundation wall is a continuation of the wall above in the same plane. The house's side walls are exposed concrete block. The house sits back about 30 feet from the street, detached and centered in a wide parcel with about ten feet of set back area to each side. The front yard is enclosed by a scalloped wood picket fence. A metal fire escape descending from a second story entrance can be seen in the north set back area at the westernmost (or back) bay of the side elevation.

November 2006: This two-story, three-bay, freestanding, frame townhouse has a false mansard resting on a wood cornice with brackets and dentils. The false mansard is unusual in having a small step in the form at the corners of the façade to give the impression that it turns the corner to mansard forms at the top of each side elevation, although, in fact, the side elevations are straight and the illusion is created by placing a smaller false mansard in front of the outer corners of the form of a more typical full width one. The windows are double-hung 1/1 wood sashes. The windows and entrance have plain wood trim, and there is a transom over the door. The entrance is accessed by a cast iron stoops with cast-iron steps and a cast iron decorative railing. The house sits back from the street about five feet, and the resultant front yard is surrounded by two courses of wood ties that serve as a low retaining wall. The area within the ties is treated as one large planting bed, with several small shrubs and an ornamental deciduous plant surrounded by mulch or stones. At the southwest corner of the parcel is a tall evergreen plant that appears to be a magnolia.

November 2006: This two-story, two-bay, shed-roofed, Italianate-style, detached, frame town house has been clad in "Permastone" (siding made of parged or cast concrete pressed to resemble stone) since the mid-twentieth century. The entrance door has a door surround with chamfered pilasters and a door hood with brackets over a transom. The windows are double-hung 1/1 aluminum. The wood cornice also has brackets, but it appears to be partially covered with aluminum panning. There are metal grate on the openings on the first story. A band of parged basement masonry is visible at the bottom of the façade. The door is accessed by two very low, wide steps with a wrought metal railing to each side, constituting a minimal stoop of modern design. A narrow passage with a metal gate along the south elevation of the house accesses the rear of the parcel.

November 2006: This two-story, two-bay frame house has a false mansard with fish scale pattern metal shingles. The house is clad in wood weatherboard siding. The windows are double-hung 2/2 wood sashes. The windows have simple wood surrounds with crown molding on the lintels and flower boxes attached at the sills. The door surround has chamfered boards serving as pilasters, and the pilasters are connected at the top by an undersized lintel board with crown molding at the top edge. Below the false mansard are brackets and dentils forming a simplified wood cornice that appears to be a recent attempt at duplicating the historic prototype. A low band of foundation wall consisting of parged brick is visible at the base of the façade. Modest steps with no handrail provide access to the entrance door in place of a stoop.

November 2006: This two-and-a-half story, two-bay, side-gabled, frame house has German wood siding. It is a recently constructed new design with numerous details inspired by historic features found on houses in this section of Alexandria; in 1992, when the most recent Sanborn map was prepared, this parcel contained an older two-story frame house located at the edge of the sidewalk and at the corner of the alley, unlike this house, which is set back about 40 feet from North Patrick Street. Its windows are double-hung 1/1 wood sashes, and they appear in pairs in the bay to the side of the entrance, in both stories. The roof has standing seam metal roofing and two pedimented dormers. There is a transom over the entrance door in an otherwise plain entrance. The door is accessed by a concrete stoop with wrought metal railings to each side. The foundation is solid, with the visible

November 2006: This two-and-a-half story, two-bay, recently constructed, historic-style frame house has a two-story projecting bay. The half story at the top of the house is a full story in height: it is designed an over-sized convex mansard (there is a small sprocked flare at the bottom) with standing seam metal roofing, about 10-12 feet in height, with a gabled-dormer centered above the projecting two-story bay. Below the mansard is a wood cornice with brackets. The windows in the first two stories are double-hung 1/1 wood sashes with plain surrounds. They are found paired a single window opening in each story of the projecting bay. The entrance is in a side elevation; enclosing it and serving like a porch is an unpainted wood pergola or bris-soleil with chamfered posts. At the base of the façade, a small portion of the foundation is visible, a band of brick laid in stretcher bond. The house is clad in wood weatherboard siding.

November 2006: This two-story, three-bay, side-gabled, frame house has a wood cornice with brackets and dentils at the top of the facade. It is very similar in form and details to 431 North Patrick Street, to which it is attached. The house is clad in vinyl siding, and it has a wood shingle roof. The windows are double-hung 2/2 wood sashes with working shutters that have shutter dogs. Flower boxes are attached at the sills of the first story windows. The entrance is in a separate bay (the third bay), which is to the south side and recessed from the street with its own side-gabled form (it appears to be a recent addition, and it does not appear to be shown on the 1992 Sanborn map). The doorway has a transom and is accessed by a three-step brick stoop with a wrought iron railing to one side. Other details include a shared chimney with 431 North Patrick that rises from a brick fire wall that pierces through the roof demarcating the party wall line between this building and 431 North Patrick Street.

November 2006: This three unit, five-bay, beige brick row building, which has two entrances, but three separate interior units (as per the 1992 Sanborn map), appears as one design from the exterior and thus is counted as one resource. The design is remarkably plain, one of the most stark, unornamented buildings in the district. The windows are double-hung 2/2 wood sashes with horizontal panes. The openings have concealed lintels and rowlock sills. The windows do not line up between the first and second story, and vary in size from small second story bathroom windows to paired windows at the first story. The façades (it has two equally treated façades, one on Oronoco Street) each rise in a single plane from the edge of the sidewalk to the top of the parapet. A single low concrete step just outside each entrance indicates that the floor is about twelve inches above the surface of the sidewalk. The parapet has a metal cap.

November 2006: This two-story, two-bay, shed-roofed, Italianate-style frame row house is the second house in from the south in a row of five frame houses built together and sharing a unified false mansard roof which is lower than usual and has a wood cornice that has small brackets and dentils. The exterior is clad in composition siding and the mansard has asphalt shingles. The windows are double-hung 1/1 wood sashes. The entrance door has a very plain surround and a one-light transom. The door is accessed by a three-step brick stoop with wrought metal railing to each side. A small, solid band of brick foundation wall laid in stretcher bond is visible at the base of the frame construction. The house shares a narrow alleyway passage with 515 North Patrick Street.

November 2006: This two-story, two-bay frame town house has been clad in "Permastone" (siding made of parged or cast concrete pressed to resemble stone) since the mid-twentieth century. It is paired with a house at 516 North Patrick Street that was apparently originally built as a matching design, although subsequent alterations make the two appear different (the pair appears to have also been identical to the neighboring pair, 512 and 514 North Patrick Street, when built). It has a false mansard with pressed metal shingles and a gabled dormer at the center, double-hung 6/6 wood window sashes, decorative louvered shutters, and a transom over the entrance door. The door and window openings have minimal wood trim, and the doorway has an altered surround with brackets supporting the transom bar (mimicking the rather common Italianate-style door hood in the district which is found supported on brackets above, rather than below, the transom). The door is accessed by a three-step concrete stoop with no railing. Where the masonry foundation was apparently previously visible as a recessed band below the frame façade, it has been clad in this case with a recessed plane of Permastone.

November 2006: This two-story, two-bay, shed-roofed, Italianate-style frame row house is the third house in from the south in a row of five frame houses built together and sharing a unified false mansard roof which is lower than usual and has a wood cornice that has small brackets and dentils. The exterior is clad in wood weatherboard siding and the mansard has asphalt shingles. The windows are double-hung 6/6 wood sashes with decorative louvered shutters. The entrance door has a three-light transom and a surround with fluted pilasters (that appear to be recent replacements) and a projecting hood that is wider than the rest of the surround and is supported on brackets. In place of a stoop, the door is accessed by three concrete steps with no railing. A small, solid band of parged brick foundation wall is visible at the base of the frame construction. The house shares a narrow alleyway passage with 521 North Patrick Street.

November 2006: This two-story, two-bay, shed-roofed, Italianate-style frame row house is the fourth house in from the south in a row of five frame houses built together and sharing a unified false mansard roof which is lower than usual and has a wood cornice that has small brackets and dentils. The exterior is clad in composition siding and the mansard has asphalt shingles. The windows are double-hung 6/6 wood sashes that have blown glass and appear to be original (possibly the only original sashes in this row). The entrance door has a three-light transom and a minimal surround consisting of a narrow, mitered strip of wood at the edge of the jamb. In place of a stoop, the door is accessed by three concrete steps with no railing. A small, solid band of parged brick foundation wall is visible at the base of the frame construction. The house shares a narrow alleyway passage with 519 North Patrick Street.

November 2006: This seven-bay brick building was built as an office wing at the rear of 1000 Pendleton Street. The older building on Pendleton Street (which began as a frame town house or a commercial building in the form of a frame town house, and was later clad in stone) is inventoried separately because it is a much older building in a totally different style. The North Patrick Street building's windows are metal casements, sometimes flanking large, center, fixed panes. The window variations include five fixed center windows flanked by four-light casements; in these examples, the top light of each casement is fixed as well. Also, there are two single casements with the top light fixed and one paired casement with the top light fixed. The building has two entrances, both of which are commercial in character, one located in a recessed entry at the building's southeast corner accessed four concrete steps in monumental form with a wrought metal railing, and the other at the center of the elevation where it is accessed by one modest concrete step. The doors at the recessed corner entry are a pair of glass doors with mill-finished aluminum frames and a transom; the center entry has a flush glass door with a mill-finished aluminum frame and no transom. The walls are red brick laid in American bond and rising in one plane from the edge of the sidewalk at grade to the top of the wall where they form an aluminum-capped parapet that conceals the roof.

November 2006: This two-story, two-bay, shed-roofed, Italianate-style frame row house is the fifth house in from the south (i.e., northernmost) in a row of five frame houses built together and sharing a unified false mansard roof which is lower than usual and a unified wood cornice (this is the only address in the row that has no brackets or dentils at the cornice; it is also the only one without a built-in alleyway, shared with an adjoining house). The exterior is clad in wood weatherboard siding and the mansard has asphalt shingles. The windows are double-hung 9/9 wood sashes. The entrance door has a two-light transom and a minimal surround consisting of a narrow, mitered strip of wood at the edge of the jamb. The door is accessed by a three-step concrete stoop, turned to the side, with a wrought metal railing. A small, solid band of parged brick foundation wall is visible at the base of the frame construction.

November 2006: This two-story, two-bay, shed-roofed, brick row house appears to have been built as a mirror-image twin to 527 North Patrick Street to which it is attached, although the latter house is now covered in stucco and has other, more subtle alterations that give the two houses distinctly different appearances. At the top of the façade is a corbelled brick cornice. The windows are double-hung 2/2 wood sash with wood lintels and sills. The entrance door has a transom and lintel, but no other surround; in place of a stoop, it is accessed by two modest steps. A small, solid band of parged masonry foundation wall is visible at the base of the otherwise exposed brick facade.

November 2006: This two-story, two-bay, shed-roofed row house appears to have been built as a mirror-image twin to 525 North Patrick Street to which it is attached, although unlike 525 North Patrick, 527 North Patrick is now covered in stucco and has other, more subtle alterations that give the two houses distinctly different appearances. At the top of the façade is a modest cornice, apparently the remnant of the original corbelled brick cornice that may be hidden behind the stucco. The windows are double-hung 6/6 wood sash with decorative louvered shutters (and apparently with wood lintels and sills concealed behind the stucco). The entrance door has a three-light transom, but no other surround; in place of a stoop, it is accessed by two modest steps. The stucco continues down to the surface of the adjoining sidewalk, concealing any evidence of the foundation.

November 2006: This house is one fourth of a quadruplex, four units built together, which was designed as a whole as an enlarged version of an American foursquare or Prairie style prototype. It is one of four such buildings that together make up a public housing complex known as the Ramsey Houses. Three of the buildings are quadruplexes and one is a triplex, for a total of fifteen units. The complex occupies one half of a city block, the east side of the 600 block of North Patrick Street, between Pendleton and Wythe Streets. Two of the units have Pendleton Street addresses and two have Wythe Street addresses. The houses were built in 1942, the first public housing constructed in the Uptown/Parker-Gray neighborhood area. According to the Sanborn maps, they were constructed of pre-cast concrete slabs, 1½ inches in thickness, which were used to build the floors, walls, and roof of each building. The concrete serves as the exterior wall surface material, which is painted with a stucco-like appearance. Each quadruplex or triplex has a hipped roof with dark-colored roofing that appears to be either a continuous membrane or a bituminous asphalt product. Metal flues rise from the center ridges of the roofs in place of chimneys. Each unit has an inset porch at the entry, with additional shelter provided by a projecting pent roof with asphalt shingles. Just outside each inset porch is a patio surrounded by a concrete half wall. The windows are double-hung 1/1 vinyl replacement sash flanked by decorative louvered shutters. The buildings are set back 10-35 feet from each public right-of-way and there is a space of 40-50 feet between every two buildings. The entire complex is surrounded by a lawn that is enclosed with a metal picket fence of recent vintage. There are mature street trees along the sidewalk on the side toward the houses; the fencing steps around the trees leaving an area of about 10 by 20 feet open to the sidewalk at each tree.

November 2006: This two-story, two-bay, freestanding brick townhouse, with a modern-era cubic form, has a glass-enclosed front porch across the first story. The brick walls are laid in American bond and rise from grade to form a parapet that conceals the house's roof form. The windows are double-hung 1/1 wood sashes with rowlock sills and concealed lintels. The porch has been enclosed across the front with five large fixed lights of glass above a solid wood balustrade which is finished with clapboard-style weatherboarding. The porch is accessed by seven brick steps that rise from the sidewalk with a wrought iron railing to each side. Flanking the steps is a low brick retaining wall, eight or nine courses of brick in height, that creates a raised planting bed to either side of the nearly centered set of steps. Above the retaining wall, the same two areas are enclosed by wooden fences of two horizontal board-rails each, nailed to widely spaced vertical posts. Within the fenced area, there is a small shrub to each side of the steps.

November 2006: This one-story, three-bay, front-gabled, Gothic Revival style, wood frame church has German siding and double-hung wood sash windows. At the center of the façade is a one-story projecting entrance bay with a gable roof containing a large double-leaf entrance doorway. The wood sash façade windows in the bays flanking the projecting entrance have stained glass panes and are in pointed-arched openings; the upper lights are divided with curved wood tracery into smaller pointed arches. The side elevation windows are rectangular double-hung 6/6 wood sashes. The church has a small steeple at the crest of the front gable and stained glass in some of the wood sash windows. Behind the church, an attached Sunday School wing extends to the south making the total footprint of the building ell-shaped. The church is surrounded by a generous lawn on three sides, all of which is enclosed by a chain link fence. Flanking the entrance are a couple of shrubs.

November 2006: This two-story, three-bay brick residential and commercial building (the first story currently contains a hair salon) has two facades, one facing Patrick Street and one facing Wythe Street. The Wythe Street façade has a tripartite window in the bay to one side of the centered doorway in the first story, with a pair of double-hung windows in the bay on the other side. The second story windows are single sets of double-hung wood sashes. The Patrick Street façade is two bays and has a paired window in the first story and a tripartite unit in the second. The windows are 1/1, except for the center pane, which is fixed, in the two tripartite units. The building's American bond brick walls (and concrete block walls on the two elevations that do not front on streets) rise from grade to form parapets on all exposed sides concealing the form of the roof. There are rowlock sills at the window openings and a metal coping at the top edge of the parapet, but almost no other decorative or distinguishing elements. The lintels of the openings are concealed and the only wood trim surrounding doors and windows is the jamb itself, with a narrow mitered facing. The doorway is accessed by a single step up at the concrete threshold. Near the center of the roofline is an interior brick chimney. A piece of wrought metal railing is mounted to each side of it. The form of the building is that of a townhouse, except that it is entered from what is normally the side elevation. The building is surrounded by lawn on three sides and the lawn is entirely grass except for a small shrub or two.

November 2006: This two-story, two-bay, freestanding frame townhouse has a false mansard with fish-scale metal shingles. The house was constructed by Habitat for Humanity in 2000 on a lot that was vacant at the time using a typical historic style as found in the district. The mansard is supported on a modest cornice with four small brackets, between which the frieze has raised panels. The windows are double-hung 1/1 wood sashes with plain wood trim, and there is a one-light transom over the door. The door is accessed by a five-step concrete stoop with a wrought iron railing to each side. Across the front of the house, next to the stoop, a brick retaining wall that is approximately thirteen courses high creates a small raised planting bed that blocks all view of the foundation. In front of it, at grade, is a second thin strip of unpaved land with a few flowers and a small shrub.

November 2006: This two-story, two-bay, brick, Colonial Revival-style house has a hipped roof and an American four-square plan. A hipped porch extends across the front of the house. There is a tripartite window in the first story. The windows are double-hung 2/2 wood sash windows with horizontal panes, except in the middle section of the first story's tripartite picture window unit, which is one large fixed pane of glass. Wide eaves without brackets or other ornamentation at the edge of the roof and an associated, unusually short fascia board at the eaves that conceals the second story lintels give the house a Spartan look showing the influence of the Prairie School of architecture. The porch has a brick base and a concrete floor. Plain porch posts are connected by recently installed turned wood balusters. Unlike its neighbors, the house sits back from the street 15-20 feet, and the front is enclosed by an unpainted wood picket fence which steps in around a parking pad at the northeast corner of the parcel.

*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Italianate, ca 1890**

November 2006: This two-story, two-bay frame row house, the southernmost in a row of three houses built together in a matching style, has a side-gable roof with a wood cornice with brackets and dentils at the eaves, wood window surrounds with peaked lintels, and a wood door surround with a peaked lintel and transom. The foundation is brick laid in American bond, the front face of the roof has asphalt shingles, and the remaining frame portion of the house is clad wood German siding. The windows are double-hung 1/1 sashes. At the top of the facade, in the front face of the roof, is gabled dormer with a double-hung 1/1 wood sash window. A large chimney shared with 123 N. Payne rises from the roofline overlapping the line between the two houses. It has been clad in siding and has a decorative square ornament in its face. The entrance door is accessed by way of stoop that consists of three cut stone steps with a wrought metal railing to one side.

November 2006: This two-story, two-bay frame row house, the center address in a row of three houses built together in a matching style, has a side-gable roof with a wood cornice with brackets and dentils at the eaves, wood window surrounds with peaked lintels, and a wood door surround with a peaked lintel and transom. The foundation is brick laid in American bond, the front face of the roof has asphalt shingles, and the remaining frame portion of the house is clad wood German siding. The windows are double-hung 1/1 sashes. At the top of the facade, in the front face of the roof, is gabled dormer with a double-hung window. A large chimney shared with 121 N. Payne rises from the roofline overlapping the line between the two houses. It has been clad in siding and has a decorative square ornament in its face. The entrance door is accessed by way of stoop that consists of three steps with a wrought metal railing.

November 2006: Located at the corner of North Payne and Cameron Streets, this two-story, two-bay, shed-roofed, brick row house is the fourth or northernmost house in a row of four houses built, apparently all at one time, with a matching cornice. The face brick of the façade is laid in stretcher bond. Unlike the others in the row, this house has altered window and door openings and painted brick. The windows are double-hung 6/6 wood replacement sashes with false muntins, decorative shutters, and wood lintels. The sills are rowlock brick; they appear to have been installed when the window openings were shortened. The wood cornice at the top of the façade has scalloped details and brackets. The doorway has no transom. The entrance is accessed by a seven-step brick-and-concrete stoop, turned to the side, with a wrought metal railing. There are masonry reinforcement bolts at both stories, a built-in air conditioning unit on the first story (cut into the masonry in a special hole between windows), and metal bars at the basement windows. The windows next to the air conditioning unit have shutters only on one side due to the conflict with the protruding device.

**202 Payne Street North      100-0133-0845**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, three-bay commercial building appears to have begun as a typical Italianate town house in the district, but was modified in the twentieth century by the replacement of the windows with casement windows, insertion of a projecting greenhouse feature in the middle bay of the first story possibly to make the building suitable for a commercial use, and the addition of stucco over the remaining exterior surfaces. The building has paired four-light wood casements in the upper stories, and diagonal board replacement doors with in-filled transoms in the bays flanking the greenhouse. At the top of the facade is a wood cornice with brackets. The doors are accessed by stepping up at the threshold of each (one of which is about twelve inches above grade), and the foundation material and other typical façade details are completely hidden by the stucco.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay frame town house has double-hung 1/1 wood replacement windows, a false mansard with asphalt shingles supported on a wood cornice with brackets and dentils at the top of the façade, and a shed-roofed door hood. There is an interior end chimney with a corbelled cap in the north elevation. Clad in aluminum siding with aluminum panning on the plain board surrounds that encircle its door and window openings, the house's details are otherwise straightforward and plain. The entrance door is accessed by a step up at the threshold. A wrought iron fence encloses a narrow strip of unpaved land in front of the house and side yards that flank the house, including an area just south of the house that contains a tree that is considerably taller than the house. There is also a street tree in front of the house.

**206.5 Payne Street North      100-0133-0848**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1910**

November 2006: This two-story, two-bay, side-gabled, freestanding frame house has double-hung 2/2 wood sash windows, a standing seam metal roof, and a large exterior end chimney that has been boxed-in with siding, as well as a central interior metal flue near the center of the roof ridge. The entrance is a wide, four-panel door with a narrow transom, accessed by a modest step in place of a transom. The house has wide corner boards, wide weatherboard-style siding, and other modern materials that make it look new. This house appears to match the frame house shown at this location when the 1958 Sanborn map was prepared, but the current design is entirely new, composed of new materials and new proportions (such as the wide door), and does not retain any clearly contributing, original historic features. On a narrow strip of unpaved land in front of the house are some ground plantings.

**210 Payne Street North      100-0133-0849**

*Primary Resource Information:* **Single Dwelling, Stories 1.00, Style: Italianate, ca 1880**

November 2006: This one-story, two-bay, shed-roofed, frame building has vinyl siding, a plain cornice at the top of the facade, and paired, double-hung 6/6 wood sash windows. The building has a reconfigured facade. There are no upper windows but there appears to be almost enough "blank" space above the first story windows to insert a second story. Although the building is shorter than most shed-roofed frame buildings in the district, it also has an unusually tall facade for the design of its current fenestration, which leaves a blank area of siding that represents approximately half of the facade area. This smaller-than-usual example of the historic district's typical late-nineteenth century shed-roofed town house form is apparently a result of alterations made to a building built as a storefront to serve as a neighborhood store (it is still shown as a store on the 1958 Sanborn map). The wood cornice at the top of the facade has brackets. In place of a stoop, the entrance door is accessed by concrete steps with no handrail. The door and window surrounds are minimal strips. The entrance door is a Craftsman style wood door with the framework to be a six-panel cross-and-Bible door, but with vision lights in the small spaces for the top two panels. On a narrow strip of unpaved land in front of the house are some ground plantings, and there is a street tree at the street side of the sidewalk.

**215 Payne Street North      100-0133-0843**  
*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Commercial Style, ca 1940**

November 2006: This is a large, vinyl-sided commercial building created by connecting several different buildings built at different times of differing materials into one large complex for a soda company. One section, toward the center of the complex, is a side-gabled house that appears to have once sat back near the center of the lot. The portion of the building fronting on North Payne Street is one story and five bays long with a stepped parapet and a commercial door with a jalousie transom. The building has a variety of window types including steel casements and glass block, and in the two-story, side-gabled portion, set back from the street, it has wood double-hung 6/6 windows. There is an aluminum cap at the top of the parapet.

**216 Payne Street North      100-0133-0852**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay, shed-roofed, semi-attached, Italianate-style frame town house is clad in aluminum siding and has double-hung 6/6 wood sash windows, decorative shutters, a wood cornice with brackets and dentils at the top of the facade, and a gabled one-story, one-bay portico or porch at the entrance door. The door is one step below grade, and as a result, the porch floor is recessed in a retaining wall. The porch posts are square wood columns. The gabled porch roof, a modern Colonial Revival-style interpretation of a pedimented portico roof, has a low pitch and is proportioned in a way that makes it seem too small and too short for the shape and size of the posts. The house sits back from the street about five feet behind a wrought iron fence, and the tiny, enclosed front yard that results has ground cover, a birdbath, and a few other garden features.

November 2006: This two story, two-bay frame row house is a recently constructed design, part of a row of three frame houses built together, based on the typical late nineteenth century town house in the district. Each of the three is complete with a false mansard roof and a projecting bay. Each has double-hung 2/2 wood sash windows, standing seam metal roofing at the false mansard, fish-scale wood shingles and a square louvered attic vent in the gable end over the projecting two-story bay, and a short section of cornice with brackets and dentils under the false mansard in the portion of the façade next to the projecting bay. The siding is wood weatherboard and the windows are paired in the projecting bay. A firewall profile rises slightly from the roofline at each side of each of the three houses. There is a very narrow unpaved area in front of the three houses that contains a few shrubs, hedges, and small ornamental trees. It is enclosed by a wrought iron fence. This house has a hood on brackets over the entrance door.

November 2006: This two-story, two-bay frame town house is a remarkably plain shed-roofed box-like form to which decorative shutters and siding have been added. The windows are double-hung vinyl 1/1 replacement units. There is a transom over the door, sheltered by a small hood on brackets that may be original. The side pilasters normally found below the brackets are missing, apparently as the result of installing new siding. The siding is vinyl. The house sits back from the street about five feet, and there is a hedge planted as a foundation planting and some ground-cover ivy in the front yard area which is enclosed by a wrought iron fence with cast iron details. The 1992 Sanborn map shows a front porch which is now missing.

November 2006: This two-story, three-bay, freestanding, frame town house has a false mansard at the top of the facade, wood German siding, double-hung 6/6 vinyl replacement windows, decorative louvered shutters in the second story, and a two-light transom over the door. The door is enclosed by a pair of louvered wood shutters in place of a screen door. The door and window trim consist of thin mitered bands of vinyl, aluminum, or wood. The house sits back from the street about five feet, and there is a hedge planted as a foundation planting and some ground-cover ivy in the front yard area which is enclosed by a wrought iron fence.

November 2006: This two-story, five-bay, frame commercial building has two entrances accessed by stoops, one at the center of the façade and one at the southernmost bay. Both entrances have transoms, and the one in the southernmost bay has a hood on brackets. Across the top of the building is a wood cornice with brackets and dentils. The windows are a combination of vinyl 1/1 double-hung units and vinyl sliders, plus two fixed panes of a larger size apparently installed as display windows for a first story commercial space. Some of the windows have metal grates over them. There is a metal pipe railing at the four-step concrete stoop accessing the center doorway, and the other doorway has a three-step brick stoop with no railing.

November 2006: This two-story, two-bay frame semi-attached town house is half of a matching pair of twins, the other one being 236 North Payne Street. It has a false mansard supported by a cornice on brackets at the top of the facade, double-hung 1/1 wood windows, wood German siding, fluted pilasters around the door, and a door hood with brackets and dentils. The Italianate-style door surround has a new stained glass transom. The house sits back from the street about five feet, and in the front yard area which is enclosed by a wood picket fence is a tall conifer, slightly taller than the house, which was apparently planted as a foundation planting.

stoop, turned to the side, which is elevated on a raised front garden space encircled by a low retaining wall. The stoop has a metal railing. The door has no transom. Much remains of the design that stood on this site in 1958, but the façade is all new materials. The city granted permission in 2005 for demolition of the older, heavily altered façade and large portions of the exposed side elevation on the basis that the historic building had no integrity due to numerous alterations in the twentieth century.

November 2006: This recently constructed two-and-a-half story, three-bay frame town house has a full-height mansard, approximately teen feet tall, with two gabled wall dormers serving as its third story. The mansard is supported on a wood cornice with dentils. The house's windows are double-hung 1/1 wood sashes, and there is a transom over the door. The exterior surface is German siding, except in the mansard, which has standing seam metal. The door and window surrounds are minimal strips of wood. In place of a stoop, the door is accessed by two concrete steps and a concrete threshold. The house sits slightly back from the street, and the area in front has a few ground plantings, including at least one shrub, and rocks serve as ground cover. There is a street tree in front of this house. The parcel was vacant at the time the 1992 Sanborn map was prepared.

November 2006: This two-story, two-bay, semi-detached house has a veneer of American-bond brick on the façade and a parged side elevation. At the top of the façade is a wood cornice with dentils. The windows are double-hung 6/6 wood sashes with ornamental lintel boards. The window pane pattern is constant in spite of the varying widths of the window openings that have a drip molding across the top edge. As the house is built on a site that is now elevated (possibly as a result of leveling the street), the entrance door, which has no transom, is accessed by an elevated brick stoop that incorporates a winding stair coming up from the sidewalk as the greater part of a small raised front lawn. The stoop has a wrought metal railing. A flower box has been mounted on the wall below the first story window sill. The raised garden space is encircled by a low brick retaining wall. A house of this footprint appears on the 1902 Sanborn map, and it is believed that it is that house with a mid-twentieth century brick veneer façade and stoop as well as wood window and door trimmings that may be from a more recent remodeling.

*Primary Resource Information: Church/Chapel, Stories 2.50, Style: Gothic Revival, ca 1920*

November 2006: This three-bay Gothic Revival-style brick church has a central double-leaf entry in a brick pointed-arched with a concrete panel filling the arch flanked by larger and smaller double-sash rectangular windows in similarly infilled pointed arches, some larger and some smaller, some with stained glass and some with clear glass, at three different levels on the façade. The side elevation is demarcated into bays by buttresses with cast concrete caps. All the openings in the façade and nave (i.e., in the side elevation) have pointed arches (except for an attic vent in the façade which has a round arch) with stuccoed spandrel infilling the curved top portion of each arched motif. At the very top of the arches, there are triangular keystones where the soldier brick surrounds curving in from the sides meet. The church is about 10-12 feet back from the street on an elevated site (possibly as a result of leveling the street) with a brick retaining wall of about ten courses, and the parcel is surrounded by a chain link fence. There are two educational wings to the rear.

November 2006: This side gabled, two-story, three-bay, brick, semidetached modern era house has soldier brick lintels, rowlock sills, double-hung 6/6 wood sash windows, decorative paneled shutters, and in one bay of the first story, paired windows in a single opening. It is almost identical to 332 North Payne Street, to which it is attached, although 330 North Payne is about three feet closer to the street than 332. There is a fluted door surround with a semi-circular fan panel above it. The first story was built high off the street with a raised basement. The first story entrance is accessed by an eight-riser brick stoop, turned to the side, with concrete stair treads, and concrete landing, and a wrought iron railing. There is a fluted door surround with a fan panel. The house sits back from the street, about fifteen feet behind a chain link fence, with a few ornamental plants in the resultant front lawn.

November 2006: This two-story, five-bay side-gabled brick building contains a community center/gymnasium. The building has a raised basement, a central entry with a replaced door, and double-hung 12/12 wood sash windows. There are brick quoins at the building's corners, with five courses of protruding brick per quoin and one course between every two quoins. Above each window opening is a brick jack arch with a keystone. The roof has wide eaves at the cornice with eaves returns at the gable ends. The entrance is accessed by a stoop with about nine steps coming up from each side. The stoop and steps have a wrought iron railing. At the building's north elevation is a recently installed steel stairway providing egress from the second story. It has I-beams as columns, a metal railing, and a quarter-circular metal roof. The first story of this staircase is enclosed by a door and a large pane of metal framed plate glass next to it (the glass pane is about four feet wide and is wider than the door).

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Italianate, ca 1880*

November 2006: This two-story, three-bay, semi-detached, Italianate-style frame town house is half of a pair of "twins," the other half being 404 North Payne Street (404A and 404B, apparently addressed in this way because that half of the pair has separate first and second story residences). The two houses together share a false mansard resting on a wood cornice with brackets and dentils at the top of the façade. The house is clad in wood German siding, and the part of the shared false mansard above this unit appears to be covered in rolled bituminous roofing. The windows are double-hung 6/6 wood sashes with a flower box attached at each sill. The window surrounds are minimal strips of wood. Above the entrance door is a transom, but the door surround is a plain board. In place of a stoop, the door is accessed by two concrete steps with no handrail. There is an ornamental plant in front of the first story windows planted as a foundation planting.

November 2006: This two-story, three-bay, semi-detached, Italianate-style frame town house is half of a pair of "twins," the other half being 402 North Payne Street. 404 North Payne Street has two addresses (404A and 404B) and two front doors apparently because this half of the pair of houses contains separate first and second story residences. The two houses together share a false mansard resting on a wood cornice with brackets and dentils at the top of the façade. The house is clad in wood German siding, and the part of the shared false mansard above this unit is clad in asphalt shingles. The windows are double-hung 6/6 wood sashes. The window surrounds are minimal strips of wood. Above the entrance door at the northeast corner of the house (404B) is a transom, but the doorway at the southeast corner (404A) does not have one. The door surround at the latter entrance is composed of plain boards. The surround at the entrance without a transom is a narrow mitered strip of modern brick molding. In place of a stoop, each door is accessed by two concrete steps with no handrail (a third step is cast into the concrete at the top as a thin extension of the threshold). There are two small ornamentals plant in front between the two entrances planted as foundation plantings.

November 2006: This two-story, two-bay Colonial Revival-style brick row house is the southernmost address in a row of seven garden-apartment-style houses built by 1941 along the center of the east side of the 400 block of North Payne Street. In the same decade, similar houses were built in the 500 block of North Payne and North West Streets, in the 1300 block of Oronoco and Pendleton Streets, along Suter and Princess Streets, and in several other parts of the Uptown/Parker-Gray Historic District. The brick walls are laid in American bond, incorporating a small section of raised basement and rising in one plane from grade to form a parapet that conceals the roof. Four houses, two at each end of the row, have parapets, while the center three units have a roof form that is very similar to a false mansard with flanking firewalls separating each two units. The false mansards have asphalt shingles. At the end units, the bottom line of the parapets is a soldier course of brick that doubles as lintels for the second story windows. In the face of the parapet, above each unit are two small diamond-shaped diapers of four and a half shiner bricks each in a pinwheel pattern. The window and door openings in the first story and basement have soldier-course brick lintels. At this address, the windows are double-hung 6/6 wood sash with rowlock sills, and the door is accessed by a stoop constructed with brick sides and five concrete steps, but no handrail. The row sits back from the street about 20 feet, and there are several shrubs and a small tree in the front yard of this house.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1940**

November 2006: This two-story, two-bay Colonial Revival style brick row house is the southernmost of five houses in a row built together, part of a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. The seven pre-1941 rows contain five to seven addresses each, while the three later east-west rows are two to three houses in length. The brick walls are laid in American bond, and they rise from grade to form a parapet at the top that conceals the roof. The north-south rows have a belt course across the entire row in line with the concealed lintels of the second story windows. It consists of soldier-course brick with brick dentils above and protruding stretcher bricks at the top and bottom of the whole band. There is a limited amount of decorative brickwork in the parapets; in this house's case, it is a diaper of fourteen soldier brick centered over each window and centered in the height of the parapet above the belt course. The parapet steps up slightly toward the middle of each row. The windows and porches have been altered from house to house. This house has double-hung 1/1 vinyl replacement sashes, soldier-course lintels in the first story, rowlock sills, decorative shutters, and a one-story, one-bay, gable-roofed porch on plain wood posts, which are square in cross section, on a concrete pad floor. There is currently a metal railing at each side of the porch, attached at the wall with a strip of wood that may be a remnant from an earlier wood railing design. The row sits back from the street about 30 feet, and the front yard of this house is a lawn enclosed by an unpainted wood picket fence.

The seven pre-1941 rows contain five to seven addresses each, while the three later east-west rows are two to three houses in length. The brick walls are laid in American bond, and they rise from grade to form a parapet at the top that conceals the roof. This row (510-518 North Payne Street) is one of the only sections of this garden apartment development where the brick façade walls have been painted. The north-south rows have a belt course across the entire row in line with the concealed lintels of the second story windows. It consists of soldier-course brick with brick dentils above and protruding stretcher bricks at the top and bottom of the whole band. There is a limited amount of decorative brickwork in the parapets; in this house's case, it is a single diaper of basket-weave-pattern brick extending over both window bays and centered in the height of the parapet above the belt course. The windows and porches have been altered from house to house. This house has double-hung 6/6 vinyl replacement sashes, rowlock sills, decorative louvered shutters, and a one-story, two-bay, shed-roofed porch on turned wood posts, with no railings, on a concrete pad floor. The row sits back from the street about 30 feet, and the front yard of this house has a few small plantings and a young ornamental tree enclosed by a chain link fence.

November 2006: This two-story, two-bay Colonial Revival style brick row house is the seventh house in from the south (i.e., the northernmost) of seven houses in a row built together, a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. The seven pre-1941 rows contain five to seven addresses each, while the three later east-west rows are two to three houses in length. The brick walls are laid in American bond, and they rise from grade to form a parapet at the top that conceals the roof. The north-south rows have brick quoins at the corner units and a belt course across the entire row in line with the concealed lintels of the second story windows, consisting of soldier course brick with brick dentils above and protruding stretcher bricks at the top and bottom of the whole band. There is a limited amount of decorative brickwork in the parapets; in this house's case, it is a panel of fourteen soldier brick centered over each window and centered in the height of the parapet above the belt course. The parapet steps up slightly toward the middle of each row so that it is generally highest at the center unit. At this unit, there is an aluminum cap at the top of the parapet. The windows and porches have been altered from house to house. This house has double-hung 1/1 vinyl replacement sashes, rowlock sills, metal awnings at the upper story window openings, and a one-story, two-bay (full width) porch consisting of a metal awning on wrought metal posts, on a concrete pad floor. White ghosting on the façade wall above the entrance door appears to indicate that this house formerly had a one bay wooden porch with a balustrade above its roof. The row sits back from the street about 30 feet, and the front yard of this house is a lawn enclosed by a chain link fence. Within the enclosed area are several shrubs.

There is a limited amount of decorative brickwork in the parapets; in this house's case, it is a panel of fourteen soldier brick centered over each window and centered in the height of the parapet above the belt course. The parapet steps up slightly toward the middle of each row so that it is generally highest at the center unit. At this unit, there is a dark metal cap at the top of the parapet. The windows and porches have been altered from house to house. This house has double-hung 1/1 vinyl replacement sashes, rowlock sills, soldier course lintels in the first story, and a one-story, one-bay, gable-roofed porch on wood posts that are square in cross section, on a concrete pad floor. The concrete pad is larger than the porch area sheltered by the roof, but a wood balustrade confines the usable porch area to the area under the roof. There is an ornate metal security grate on the screen door. The row sits back from the street about 30 feet, and the front yard of this house is a lawn enclosed by a chain link fence. Within the enclosed area are several shrubs and some tall ornamental plants at the southeast area of the yard and there is a very large evergreen (possibly an arbor vitae) in the southwest corner of the yard.

November 2006: This two-story, two-bay Colonial Revival style brick row house is the fifth house in from the south (i.e., northernmost) of five houses in a row built together, part of a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. The seven pre-1941 rows contain five to seven addresses each, while the three later east-west rows are two to three houses in length. Throughout the matching houses of this development, the brick walls are laid in American bond, and they rise from grade to form a parapet at the top that conceals the roof. This row (510-518 North Payne Street) is one of the only sections of this garden apartment development where the brick façade walls have been painted, but at 518 North Patrick, the brick walls have been covered in aluminum siding, the only house in the entire development where this has occurred. This house has double-hung 1/1 vinyl replacement sashes, sills that appear to have been covered with aluminum panning, decorative louvered shutters, and a one-story, two-bay (full width) porch consisting of a metal awning on wrought metal posts, on a concrete pad floor. The row sits back from the street about 30 feet, and the front yard of this house is enclosed by a chain link fence and has a few small plantings as well as a mature but severely pollarded tree, about eight feet in height, that currently has only stubs for branches.

**528 Payne Street North      100-0133-0931**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1940**

November 2006: This two-story, two-bay Colonial Revival style brick row house is the fourth house in from the south of five houses in a row built together, part of a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. The seven pre-1941 rows contain five to seven addresses each, while the three later east-west rows are two to three houses in length. The brick walls are laid in American bond, and they rise from grade to form a parapet at the top that conceals the roof. The north-south rows have a belt course across the entire row in line with the concealed lintels of the second story windows. It consists of soldier-course brick with brick dentils above and protruding stretcher bricks at the top and bottom of the whole band. There is a limited amount of decorative brickwork in the parapets; in this house's case, it is a diaper of fourteen soldier brick centered over each window and centered in the height of the parapet above the belt course. The parapet steps up slightly toward the middle of each row. The windows and porches have been altered from house to house. In place of a porch, there is a concrete pad with one step up at the threshold of the entry door. The row sits back from the street about 30 feet. The front yard of this house is not enclosed with fencing like its neighbors, but it contains a mature ornamental tree, about ten feet in height with many branches and a canopy that is about 18 feet in diameter. There is also a potted plant on the concrete pad next to the entry door.

**529 Payne Street North      100-0133-0916**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1940**

November 2006: This two-story, two-bay Colonial Revival style brick row house is the sixth house in from the south of seven houses in a row built together, a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. The seven pre-1941 rows contain five to seven addresses each, while the three later east-west rows are two to three houses in length. The brick walls are laid in American bond, and they rise from grade to form a parapet at the top that conceals the roof. The north-south rows have a belt course across the entire row in line with the concealed lintels of the second story windows. It consists of soldier course brick with brick dentils above and protruding stretcher bricks at the top and bottom of the whole band. There is a limited amount of decorative brickwork in the parapets; in this house's case, it is a basket-weave pattern in a single diaper that extends over both window bays and is centered in the height of the parapet above the belt course. The parapet steps up slightly toward the middle of each row so that it is generally highest at the center unit. At this unit, there is a metal cap at the top of the parapet. The windows and porches have been altered from house to house. This house has double-hung 6/6 wood sash windows, rowlock sills, decorative louvered shutters, and a wide metal awning, the width of the house, with no supports serving in place of a porch. The porch-like area has a concrete pad floor and a metal balustrade. The row sits back from the street about 30 feet, and the front yard of this house is enclosed by a chain link fence and has a few shrubs and a mature tree that has a large trunk and a number of small branches indicating it has at least once been pruned back to just the trunk.

**621 Payne Street North      100-0133-0430**

*Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Colonial Revival, 1951 and 1958**

November 2006: This is a large, one story, Colonial Revival style warehouse building that occupies an entire city block, between North Fayette and north Payne Streets, and between Wythe and Pendleton Streets. It was constructed in two halves, in 1951 and 1958 (according to a notation on the Sanborn maps). The building serves as a warehouse for the United States Printing Office. The southern half is almost identical to the northern half. Each half is a "U"-shaped design consisting of a main wing on the North Fayette Street side and two narrow wings that project toward North Payne Street; the composite design is shaped in plan like a backwards capital letter "E." As a result, each half contains a courtyard that opens to North Payne Street. Each courtyard comprises a little over 25% of the footprint area of that half of the building. While the main, larger wing of each half of the building abuts North Fayette Street, the main man-door entrance is in one of the smaller wings facing toward North Payne Street, and 621 North Payne Street is used as the building's address. The building has brick walls laid in American bond over a cinder block base (according to the 1992 Sanborn map). The foundation is partially exposed, poured-in-place concrete. The roof is flat, concealed behind a parapet. The North Payne Street elevation has four individual façade designs, one for the short end of each of the narrow wings. The façade design of the wing just north of center has a centered

United States Department of the Interior  
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES  
CONTINUATION SHEETUptown/Parker-Gray Historic District  
City of Alexandria, VirginiaSection 7 Page 193

entrance door flanked by three windows to each side. The wing at the Pendleton Street side of the building has two openings with windows or louvers, and the remaining two remaining wings have no openings on this elevation. The two courtyards have chain link fencing along the North Payne Street side, with a wide gate used daily at the center of each courtyard. Within each courtyard, a shed-roofed metal canopy, ell-shaped in plan, supported on metal columns, shelters loading dock bays on two sides. The Pendleton Street elevation has 18 openings of varying sizes, including one loading dock bay with a roll-up garage door, one man-door, and a number of smaller openings with either windows or louvers. The North Fayette Street elevation has ten loading dock bays with roll-up garage doors, plus one man-door. The Wythe Street elevation has no doors or windows. All the windows and/or louvered ventilation openings are covered with metal grates. The windows have rowlock sills. There is cast concrete coping at the top edge of the parapet. An unusual feature is that the two corners of the building on the Wythe Street side are angled at 45 degrees, the angled surface being between 8 and 15 feet in width, with no openings. The building was photographed from the corner of Wythe and North Fayette Streets, showing mainly the North Fayette Street elevation.

**Pendleton Street****708 Pendleton Street      100-0133-0939***Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Prairie School, ca 1920**

November 2006: This two-story, two-bay, stucco-clad, American four-square house has a semi-hexagonal projecting bay window in the first story façade that extends into the space of a full width two-bay front porch. The windows are vinyl 1/1 replacement sashes. Other features include paired windows on the second floor, a hipped dormer on each of the four sides of the roof, cast concrete sills, and wide eaves at the edges of the roof with a wide fascia board and no brackets. The entrance doorway has a 3-light transom and a panel to each side that appears to be an altered one-pane sidelight. The porch has a hip roof and Tuscan columns of stucco-covered masonry piers. The piers are connected by a solid masonry balustrade with a stucco finish which not only encloses the porch, but also steps down the front stairs accessing the porch. A sign on one of the fascia boards of the porch says "Durant House." The house has alleys on both sides which come together as a paved area about sixty feet behind the house's rear wall. The house sits back from Pendleton Street and the alley to the east, both by about 10 feet, so that there is a small front and side yard. The yard is enclosed by a brick wall about four feet tall, with a wrought iron gate at the foot of the porch stairs. Within the yard, there is a large shrub in front of the center column of the front porch.

**709 Pendleton Street      100-0133-0938***Primary Resource Information:* **Commercial Building, Stories 1.00, Style: Art Deco, ca 1940**

November 2006: This one-story, ten-bay commercial building appears to have been built to have five large storefront display windows facing Pendleton Street and three similar ones facing North Washington Street, although they were all in-filled with brick, smaller windows and doors, and Colonial Revival style wood trim at some point between 1965 and 1990. The building is a blend of several kinds of construction, constructed with a limestone facing over brick (and apparently a frame that is partly steel or concrete), although the Sanborn map refers to it as cinder block with brick facing. The stone is specifically covering the six piers or pilasters that separate the original display window bays on the Pendleton Street side and the four corresponding ones on the North Washington Street side. At the tops of the pilasters, the stone is carved to create Art Deco-style motifs that serve as capitals, and it continues with a different Art Deco-style motif to form a continuous but narrow stone band, like a cornice, over the now-altered display window bays. At the base of each pier, a small area is faced with black stone (or a stone-like material), some small sections of which have broken off exposing the underlying construction. The windows are fixed wood sashes, most of them having 20 panes in four rows of five. The doors that lie next to these windows have multi-light transoms. There are smaller windows in the infill on the North Washington Street side, and they are covered with security grates consisting of vertical iron or steel bars connected by horizontal straps that are hinged. A low mansard with standing seam roofing appears to be the result of an alteration in the 1980s when it was popular to add this particular kind of detail to storefront commercial buildings.

**710 Pendleton Street      100-0133-0940***Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Queen Anne, ca 1890**

November 2006: This two-and-a-half story, three-bay, Queen Anne style house is clad in unpainted weatherboard with painted trim. The foundation is raised, constructed of brick laid in American bond. The windows are double-hung 1/1 wood sashes. The roof is a front gable with asphalt shingles, and there is an interior stove flue in place of a chimney. There are wide eaves at the roof, and the gable end is pedimented, the bottom line being a wood cornice with brackets and dentils. The window surrounds are wide, plain boards with a backband creating an appearance similar to the interior trim style known as sanitary casing. The entrance is from a one-story, one-bay gabled side porch with square wood posts. The house occupies what appears to be

CONTINUATION SHEETUptown/Parker-Gray Historic District  
City of Alexandria, VirginiaSection 7 Page 194

the back of the parcel of 537 North Washington Street (based on the 1992 Sanborn map). There is a narrow planting area with ornamental shrubs between the house and the sidewalk, but otherwise, there is almost no open land directly associated with this house.

*Individual Resource Status:* Single Dwelling      Contributing      *Total:* 1

**800-804 Pendleton Street      100-0133-0943**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1870**

November 2006: This two-story, five-bay frame house is attached to a much older brick house that faces but is set back from North Columbus Street (534 North Columbus Street), which is one of the more significant examples of early construction in the district. The Pendleton Street house is an unusual example in the historic district because at one point it served as an addition to the North Columbus Street house, and since then, it has been internally reconfigured at least twice to make it serve as a separate residence with separate owners. This background accounts for its ambiguous appearance: when seen exclusively from Pendleton Street, it has the characteristics of a typical row house (or a pair of them), but when seen on an angle or from North Columbus Street, this tiny frame house clearly looks like an addition. It is clad wood German siding. At the top of the Pendleton Street façade is a wood cornice with brackets and dentils. The windows are double-hung 2/2 wood sashes with wood surrounds. The roof is a shed roof with a shallow pitch. The house nearly abuts Pendleton Street but has a narrow planting bed across the front with at least one deciduous ornamental plant that has a thin canopy but is about nine feet in height. There are small sections of side yard along Pendleton to the east and west. The yard to the east is surrounded by a wrought iron fence and appears to belong to 534 North Columbus Street. The yard to the west appears to belong to the Pendleton Street house. It is enclosed by a tall wood privacy fence, but also contains plantings and a second story balcony on the Pendleton Street house's side elevation that are barely visible from the street.

**806 Pendleton Street      100-0133-0944**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1870**

November 2006: This two-story, two-bay, shed-roofed, frame Italianate-style town house appears to have been built as a twin with its adjoining neighbor (808 Pendleton Street). It is clad in German siding but also has Inselstone siding on the exposed elevation. A piece of plywood has been placed across the bottom one foot of the façade, presumably to repair an area where the proximity to the ground led to the loss of some of the siding from rotting or impact. At the top of the façade is a wood cornice which is continuous with that of the neighboring house; the cornice is supported by a single bracket where the two houses meet. The windows are double-hung 6/6 wood sashes. The house apparently fills the front half of the parcel it occupies, and thus there are no visible landscape features on the Pendleton Street side.

**807 Pendleton Street      100-0133-0941**

*Primary Resource Information:* **Store, Stories 1.00, Style: Modern Movement, ca 1950**

November 2006: This one-story, two-bay, flat-roofed Modern Movement style brick commercial building has walls laid in American bond that rise from grade to form a parapet concealing the roof. The foundation is not visible. The window is a large display area with two lights of plate glass fixed in a mill-finished aluminum frame. There are three ventilation grills in the face of the parapet which has a metal cap. The recessed commercial entrance has a steel security grate and the entrance area is sheltered by a cloth awning that is cubic in form and contains signage. There is also a sign on the parapet saying "Old Town Seafood." This building and its adjoining neighbor (809 Pendleton Street), which is very similar in design and appears to have been built at approximately the same time, fill almost all the space between Pendleton Street, two alleys that flank the buildings, and a third alley that runs parallel to Pendleton Street at the rear of the buildings.

**900 Pendleton Street      100-0133-0950**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1990**

November 2006: This two-story, two-bay, recently constructed freestanding brick town house has a two-story, semi-hexagonal, three-sided projecting bay window in the facade. Two similar bay windows are found in the side elevation. The house has a raised basement consisting of brick in the same plane as the remaining walls, which are laid in stretcher bond and rise to a cornice at the edges of a shed roof. The house's windows are vinyl 1/1 sashes, paired in the face of the bay window. The windows are rectangular set in segmental arches. The entrance door has a semi-circular transom, and there is a round window above it in the second story. The door is accessed by a three brick steps serving as a stoop. There is a wrought metal handrail to one side of the steps. At the top of the facade is a wood cornice with dentils. The house occupies a corner lot. There is narrow side yard space on the North Alfred Street side of the parcel that contains hedges and other ornamentals including one or two small trees. Despite the house's similarity to historic prototypes in the district, the absence of a true bond (since the use of only stretchers indicates that the bricks are not in fact bonded) and relatedly, the use of cut bricks with a continuous vertical head joint in place of toothing at the corners of the bay window, are indications of the house's recent construction. The parcel appears as vacant in the 1958 Sanborn map, and this house was built shortly before the 1992 Sanborn map was prepared. A notation on the 1992 Sanborn map indicates that the exterior brick is only a veneer, as is also suggested by the uniform use of stretchers.

**902 Pendleton Street      100-0133-0951**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Modern Movement, ca 1960**

November 2006: This two-story, two-bay Modern Movement style house has brick walls laid in American bond and a cubic form with a flat roof concealed by a parapet. The foundation is parged concrete. The windows are double-hung 2/2 wood sashes with horizontal panes and rowlock sills. The brick walls, which rise in one plane to form the walls and parapet, are constructed of textured brick. There is an aluminum cap at the top of the parapet. The area in front of the house is an uncovered patio, four steps up from the street, surrounded by a brick half wall. There is a street tree in front of the house. A frame house of approximately the same size stood at this site at the time that the 1958 Sanborn map was prepared. However, it differs from the brick house shown on the 1992 Sanborn map in that the current house has a rectangular footprint while the earlier house was indented at the rear (as in an ell-form at the kitchen) and had a front porch. A notation on the 1992 Sanborn map indicates that the actual structural system of this house is concrete block.

November 2006: This two-story, two-bay brick house was built as a twin with 909 Pendleton Street using one of the most unusual designs found in the district. Constructed of concrete, apparently in either poured-in-place or pre-cast form, the two houses have a Spanish Colonial Revival or Mission-style design with an overall appearance reminiscent of Santa Fe or similar communities in the American southwest. The design also harmonizes with that of the four Ramsey Houses buildings, a public housing development built after the two Pendleton Street houses were built using pre-cast concrete panels (the Ramsey Houses project occupies nearly half of the same city block, with addresses facing North Patrick Street, Pendleton Street, and Oronoco Street). The exterior walls rise in a single plain from a solid area of exposed foundation at grade up to what may be a parapet or the edge of a low-pitched shed roof at the roofline. At the front is a shed-roof porch with a stuccoed segmental arch of concrete in the front and two narrower but similar arches at the porch's sides. The porch design features two decorative medallions set in the concrete above the springing points of the façade arch. The porch floor is concrete, with two steps up from grade, the steps being nearly as wide as the arch. The windows are 6/6 and 8/8 vinyl replacement sashes. There is a faint 12x12 grid on the side elevation which may indicate the method of construction. The house sits back from the street about 15-20 feet, with some small plantings in decorative urns in front of the porch.

In front of the house, there is a very small area of grass lawn, apparently an unpaved section of the public right-of-way (according to the 1992 Sanborn map).

**909 Pendleton Street      100-0133-0947**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Mission/Spanish Colonial Revival, ca 1920**

November 2006: This two-story, two-bay brick house was built as a twin with 907 Pendleton Street using one of the most unusual designs found in the district. Constructed of concrete, apparently in either poured-in-place or pre-cast form, the two houses have a Spanish Colonial Revival or Mission-style design with an overall appearance reminiscent of Santa Fe or similar communities in the American southwest. The design also harmonizes with that of the four Ramsey Houses buildings, a public housing development built after the two Pendleton Street houses were built using pre-cast concrete panels (the Ramsey Houses project occupies nearly half of the same city block, with addresses facing North Patrick Street, Pendleton Street, and Oronoco Street). The exterior walls rise in a single plain from a solid area of exposed foundation at grade up to what may be a parapet or the edge of a low-pitched shed roof at the roofline. At the front is a shed-roof porch with a stuccoed segmental arch of concrete in the front and two narrower but similar arches at the porch's sides. The porch design features two decorative medallions set in the concrete above the springing points of the façade arch. The porch floor is concrete, with two steps up from grade, the steps being nearly as wide as the arch. The windows are 1/1 vinyl replacement sashes. There is a faint 12x12 grid on the side elevation which may indicate the method of construction. The house sits back from the street about 15-20 feet, with some small plantings in planting beds in front of the porch and, at the perimeter of the front yard, a very low plastic garden border designed to mimic a picket fence.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay, shed-roofed, frame row building has double-hung 1/1 wood sash windows, new wood German siding, a wood cornice with dentils and brackets, and an otherwise plain front. The window and door surrounds are thin strips of wood covering barely more than the face of each jamb. In place of a stoop, the front door is accessed by two concrete steps with no handrail. By comparison to its flanking neighbors, this house sits back about four feet, resulting in two small planting areas, one to each side of the steps, in which there are a few very small ornamental bushes.

November 2006: This two-story, two-bay frame row house was apparently built as a twin with its adjoining neighbor at 914 Pendleton, whose façade is a mirror of this one except for some changes that were made in the twentieth century. The two houses share an alleyway at the dividing line between the two, except that the alley appears to have been altered by reduction of the door so that only the half of the doorway on the 912 Pendleton Street side of the line remains. The house is clad in vinyl siding, with minimal strips of trim outlining the window and door openings, and the windows are double-hung 2/2 wood sashes with decorative louvered shutters. There is a wood cornice with brackets and dentils at the top of the façade. The door, which has a two-light transom, is accessed by a three-step concrete stoop with cheek walls. A thin strip of land in front of the house, apparently an unpaved portion of the public right-of-way, contains a couple of small ornamental plants and a small concrete planting urn. A street tree lies in front, at the property line between this house and 910 Pendleton Street.

**913-915 Pendleton Street      100-0133-0948**  
*Primary Resource Information:* **Multiple dwelling, Stories 2.00, Style: Prairie School, 1942**

November 2006: This house is a quadruplex, four units built together, which was designed as a whole as an enlarged version of an American foursquare or Prairie style prototype. It is one of four such buildings that together make up a public housing complex known as the Ramsey Houses. Three of the buildings are quadruplexes and one is a triplex, for a total of fifteen units. The complex occupies one half of a city block, the east side of the 600 block of North Patrick Street, between Pendleton and Wythe Streets. Two of the units have Pendleton Street addresses and two have Wythe Street addresses. The houses were built in 1942, the first public housing constructed in the Uptown/Parker-Gray neighborhood area. According to the Sanborn maps, they were constructed of pre-cast concrete slabs, 1½ inches in thickness, which were used to build the floors, walls, and roof of each building. The concrete serves as the exterior wall surface material, which is painted with a stucco-like appearance. Each quadruplex or triplex has a hipped roof with dark-colored roofing that appears to be either a continuous membrane or a bituminous asphalt product. Metal flues rise from the center ridges of the roofs in place of chimneys. Each unit has an inset porch at the entry, with additional shelter provided by a projecting pent roof with asphalt shingles. Just outside each inset porch is a patio surrounded by a concrete half wall. The windows are double-hung 1/1 vinyl replacement sash flanked by decorative louvered shutters. The buildings are set back 10-35 feet from each public right-of-way and there is a space of 40-50 feet between every two buildings. The entire complex is surrounded by a lawn that is enclosed with a metal picket fence of recent vintage. There are mature street trees along the sidewalk on the side toward the houses; the fencing steps around the trees leaving an area of about 10 by 20 feet open to the sidewalk at each tree.

**918.5 Pendleton Street 100-0133-0962**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay frame house clad in wood German siding abuts the brick house at 918 Pendleton Street and has a false mansard roof with asphalt shingles, a wood cornice with brackets and dentils, double-hung 1/1 wood sash windows with decorative shutters, paired windows in both stories of the bay next to the entrance, and a transom over the entrance door. Across the width of the façade is a hip-roofed porch on square wood posts that may have replaced earlier columns as evidenced by the Tuscan pilasters found where the porch meets the façade of the house. The porch has a plain wood balustrade with square balusters. The porch is only a step or two up from the sidewalk. A narrow strip of land in front of the house, apparently about half consisting of an unpaved portion of the public right-of-way, contains two ornamental plants in front of the porch railing. There is also a street tree in front of the house. The house appears to be a few feet further back from the street by comparison to its neighbor at 918 Pendleton Street than the way it is shown on the 1992 Sanborn map; it is not clear whether it might have been moved or whether the map may have been drawn incorrectly.

**1000 Pendleton Street      100-0133-0968**

*Primary Resource Information:* **Store, Stories 3.00, Style: Italianate, ca 1880**

November 2006: This is a two-story, three-bay, frame commercial building that has been clad in stone. It was built on the model of the typical late-nineteenth century frame town house in the district, but it may have originally contained a storefront. The stone facing was added about 1960 or 1970, essentially a layer of vertically placed flagstones, with very few horizontal joints (the stones are all irregular, and the joints are all on angles). It has a false mansard roof form, with an asphalt shingled surface, supported on a wood cornice with brackets and dentils. At the center of the first story of the façade is a hip-roofed projecting bay window with a large, single-pane, fixed sash. The building's remaining windows are double-hung 1/1 wood sashes with rowlock sills that were added when the stone was added. The entrance, which is an anodized-aluminum-framed, tinted glass door, is accessed by two concrete steps in place of a stoop. There are shrubs in the narrow space around the base of the bay window, and an asymmetrical, aging conifer is located next to the entrance door at the front of the gap between this building and the adjoining house. There is a large brick addition to the rear, essentially a seven-bay-long office building, added about 1950. It has been treated as a separate resource in this survey and inventory because it was built much later, is of very different character, and is large enough to treat as a separate entity. See the entry for 522 North Patrick Street (#100-0133-0744).

The entrance is inset next to the projecting bay. The entrance door has a transom and a plain surround. The house sits back from the sidewalk a few feet, and there is a row of small shrubs in front planted as foundation plantings. One of these, possibly an arbor vitae, is over ten feet in height and another is about five feet in height, partially blocking the first story windows; however, surrounding these is a line of much lower shrubs possibly planted as ground cover but now grown to a height of about two feet.

November 2006: November 2006: This three-story, two-bay, side-gabled, brick row house is the third house in from the south in a row seven houses built together. All the houses in the row are built on the same design with variations in the shape of windows and doors. The houses actually back up to North Patrick Street and face a courtyard that is parallel to it, but they have Pendleton Street addresses in reference to the cross street that lies about 70 feet from the southernmost house (three other similar houses that are not attached to these face onto Pendleton Street at the street corner). The houses are not aligned perfectly, some single addresses and some pairs of addresses being stepped out from the façade line of the others. There is also a slight variation in the color of the brick from one address to another. Each house has a garage in the first story. The side-gable roofs have asphalt shingles. The windows are double-hung 1/1 wood sashes with rowlock sills. At the third story windows, the lintels are concealed inside a barely visible wood fascia board within the eaves of the roof. At this address, the windows all have decorative louvered shutters and soldier-course lintels. The first story entrance is recessed in a round arch, and the sides of the arch below the springing point are rusticated (i.e., two out of ever six courses of the brick are recessed), as is also the case at both sides of the garage door opening. There is a brick interior end chimney with a corbelled cap. A notation on the 1992 Sanborn map indicates that that the actual structural system for all the houses in this row is concrete block with a brick facing.

neighborhood bakery and the home of the baker. The bakery was started in what was originally an adjoining frame town house to the rear of this house, facing onto North Henry Street. That building became connected as a rear wing of the Pendleton Street house when an addition was built bridging the two together along North Henry Street. The enclosed front porch area was also once part of the bakery, but then became a barbershop space. The porch, which now has a single Tuscan column at the street corner, is one-step up from grade, and the enclosed portion of the porch has its own entrance with a transom. It is accessed by a single step with a wrought metal handrail to one side. The house sits back a few feet from Pendleton Street and part of it is recessed from North Henry Street at the street corner. The resultant area is part of a lawn that wraps around to incorporate a large open area to the east and south. The front and side yards are enclosed by a chain link fence.

November 2006: This two-story, two-bay, Colonial Revival style brick row house is the easternmost address in a row of three matching units. The brick walls are laid in American bond and rise in a single plane from grade to form a parapet at the top of the wall that conceals the roof. There are rectangular vents with decorative cast metal grills in the parapet. The windows are double-hung 2/2 wood replacement sashes. A flower box is mounted at the sill of the first story window. There are soldier brick lintels at the second story window openings. There is a rowlock brick belt course at the line of the second story window sills and a second one at the base of the parapet, passing over the soldier-course lintels of the window openings. The entrance door has a surround with fluted pilasters, the top of which is obscured by a metal awning. The door is accessed by two concrete steps with no railing. The row sits back from the street about 30 feet, and the front yard of this house is surrounded by a three-course concrete block retaining wall with a rowlock brick cap, on top of which is a chain link fence hidden within dense ivy. As this is the end unit, there is also a small side yard also enclosed by the fence. The yard contains a mature deciduous tree near the corner. There is also a very young tree along the sidewalk. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing. The house appears on the 1958 Sanborn map, but this section of Pendleton Street was shown as vacant on the 1941 map even though the neighboring houses on the perpendicular streets had already been built. This row and a nearly identical one at the opposite side of the same city block (1307-1311 Oronoco Street) are similar to seven other rows (at least 43 houses) built before 1941, in the area between them, in the 500 blocks of North Payne and North West Streets.

November 2006: This two-story, two-bay, Colonial Revival style brick row house is the center address in a row of three matching units. The brick walls are laid in American bond and rise in a single plane from grade to form a parapet at the top of the wall that conceals the roof. There are rectangular vents with decorative cast metal grills in the parapet. The windows are double-hung 1/1 vinyl replacement units with soldier brick lintels at the upper story openings. Each of the two upper story windows has a decorative shutter to one side. There is a rowlock brick belt course at the line of the second story window sills and a second one at the base of the parapet, passing over the soldier-course lintels of the window openings. The entrance door is part of a tripartite ensemble with large sidelights (with 1/1 vinyl sash and a wood panel at the bottom) that serve as the only first story windows in the façade. The door ensemble is designed so that it suggests that there may be a porch-like space behind it which it is enclosing. The top of the door ensemble is a narrow wood cornice. The bricks surrounding the door ensemble have been partially painted in a band of about four inches in width. The door is accessed by steps with no handrail. The row sits back from the street about 30 feet, and the front yard of this house is surrounded by a chain link fence. The front half of the yard is sloped and is planted with a ground cover of a creeping juniper-like evergreen. There are also ornamental plants planted as foundation plantings next to the steps at the entrance. The Sanborn maps indicate that the actual structural system of this row is cinder block with a brick facing. The house appears on the 1958 Sanborn map, but this section of Pendleton Street was shown as vacant on the 1941 map even though the neighboring houses on the perpendicular streets had already been built. November 2006: This two-story, two-bay, brick row house has subtle elements of the Classical Revival, Craftsman, and Colonial Revival styles. It is one of three nearly identical houses in a row that in turn are part of a continuous row of eight matching houses; these houses closely resemble other rows found across the street in the 100 block Peyton Street and around the corner in the 1400 block of Cameron Street and in the 100 block of Harvard Street a block away. This house is the southernmost unit in the row. It is constructed of textured brick, laid in American bond, and at the top of the façade, concealing the flat roof, is a capped parapet that contains with two urn-like pressed metal ornaments. Within the parapet, as an ornamental accent, is a course of soldier bricks. Across the front of the first story is a two-bay porch on square wood posts connected by a fairly new railing of turned balusters. The area below the floor is enclosed by wood lattice. The windows are a pair of 6/1 double-hung wood sashes in the first story, while two 6/6 double-hung wood sash windows are found in the second story. The window openings have stone or cast concrete lug sills.

**111 Peyton Street North      100-0133-0986**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1925**

November 2006: This two-story, two-bay, brick row house is the southernmost unit in a row of eight matching, adjoining row houses. The design of the row, as a whole, has elements of the Classical Revival, Craftsman, and Colonial Revival styles. The houses also closely resemble other rows found across the street in the 100 block Peyton Street and around the corner in the 1400 block of Cameron Street and in the 100 block of Harvard Street a block away. In this row, each end unit has a tall, stepped parapet with decorative masonry, while the other houses have false side-gable roofs (similar to a false mansard, but with a steeper slope and simpler details) with firewall parapets at each party wall. At the base of the stepped parapet of this house is a band of soldier brick four courses above the concealed lintels of the second story windows. Between the soldier course and parapet, is a pattern of rectangular and diamond-shaped ornamental concrete similar to brick diapering. The second story windows are arranged as a bank of three sets of sashes with a long stone or cast concrete lug sill. The sashes are double-hung 1/1 vinyl replacements. Across the first story is a hip-roofed porch enclosed with aluminum siding. The front wall of the porch enclosure contains an entrance door and a large single-light window fixed in a wood frame. The door is accessed by five wood steps with a pipe railing to each side. The row sits back from the street about 15 feet, on an embanked site, and this house is surrounded by a chain link fence. A row of hedge-like ornamental shrubs hides the bottom area of the porch beneath the porch floor. The sloped front part of the yard is planted in grass. There is a poured-in-place concrete retaining wall at the south edge of the yard, at an alley, and seven concrete steps rise next to the retaining wall to the wood steps that lead up to the house. A concrete curb extends across the front of the parcel under the chain link

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1925**

November 2006: This two-story, three-bay, brick row house is the second address in from the south in a row of eight matching, adjoining row houses. The design of the row, as a whole, has elements of the Classical Revival, Craftsman, and Colonial Revival styles. The houses also closely resemble other rows found across the street in the 100 block Peyton Street and around the corner in the 1400 block of Cameron Street and in the 100 block of Harvard Street a block away. In this row, each end unit has a tall, stepped parapet with decorative masonry, while the other houses have false side-gable roofs (similar to a false mansard, but with a steeper slope and simpler details) with firewall parapets at each party wall. At this house, the false mansard has asphalt shingles. The sashes are double-hung 6/1 vinyl replacements. Across the first story is a hip-roofed porch on Tuscan columns with a plain balustrade with square balusters. The area beneath the porch floor is enclosed with lattice. The porch is accessed by five brick steps with a wood railing on one side. The row sits back from the street about 15 feet, on an embanked site, and the front yard of this house is surrounded by a low concrete retaining wall. The sloped front yard is planted in grass except for a few ornamental plants along the north and south edges. The land is shown as vacant on the 1921 Sanborn Fire Insurance map; the row appears first on the 1941 version of the map.

November 2006: This two-story, two-bay, brick row house has subtle elements of the Classical Revival, Craftsman, and Colonial Revival styles. It is one of three nearly identical houses in a row that in turn are part of a continuous row of eight matching houses; these houses closely resemble other rows found across the street in the 100 block Peyton Street and around the corner in the 1400 block of Cameron Street and in the 100 block of Harvard Street a block away. This house is the third address in from the south in the row. It is constructed of textured brick, laid in American bond. At the top of the façade is a capped parapet concealing the flat roof. Within the parapet, as an ornamental accent, is a course of soldier bricks. Across the front of the first story is a two-bay, shed-roofed porch on square wood columns connected by a fairly new railing of square balusters. The area below the floor is enclosed by lattice. The windows are 1/1 double-hung vinyl replacement sashes, paired in one opening in the first story. The window openings have stone or cast concrete lug sills.

November 2006: This two-story, brick row house has subtle elements of the Classical Revival, Craftsman, and Colonial Revival styles. It is one of two nearly identical adjoining houses that are the center units of a continuous row of eight matching houses; these houses closely resemble other rows found across the street in the 100 block Peyton Street and around the corner in the 1400 block of Cameron Street and in the 100 block of Harvard Street a block away. This house is the fourth address in from the south in the row. It is constructed of textured brick, laid in American bond. At the top of the façade is a pent-roof or low-pitched false mansard with asphalt shingles, bridging the parapet of the house immediately to the south and a firewall that separates this house from the one immediately to the north. Across the front of the first story is a three-bay porch on square wood posts connected by a fairly new railing of square balusters. Above the entrance bay of the porch roof is a pediment-like gable end with weatherboard siding. Side-by-side double columns have been placed to support the gable end visually. The area below the floor is enclosed by lattice. The windows are double-hung vinyl replacement sashes with 6/6 muntin grills, except that the first story opening has a tripartite arrangement of a 6/6 unit flanked by narrow double-hung sidelights which also have 6/6 muntin grills. In the second story, three windows evenly spaced across the façade with only about twelve inches of brick between each two openings. The window openings have stone or cast concrete lug sills.

The house at 119 North Peyton Street has the decorative stepped parapet. At the base of the parapet is a band of soldier brick four courses above the concealed lintels of the second story windows. Between the soldier course and parapet, is a pattern of rectangular and diamond-shaped ornamental concrete similar to brick diapering. The second story windows have concealed lintels and stone or cast concrete lug sills. The windows are double-hung 1/1 wood sashes. Across the first story is a hip-roofed porch on Tuscan half columns supported on brick piers that continue down below the porch floor to grade. There is lattice below the porch. The porch has a wood railing with a plain balustrade of square balusters, and it is accessed by four concrete steps with concrete cheek walls that were cast with decorative panels. The entrance door is a nine-panel bungalow-style design which may be original. It has tall bottom panels, a top rail whose bottom edge is cut to form an arch, and a vision light in place of the center panel has diamond lattice casing. The row sits back from the street about 15 feet, on an embanked site, and the front yard of this house consists of two terraces defined by wood cribbing, with minor planting consisting mainly of annual flowers. Alongside the cribbing, there is a set of six concrete steps. The land is shown as vacant on the 1921 Sanborn Fire Insurance map; the row appears first on the 1941 version of the map.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890**

November 2006: This two-story, two-bay brick building is half of a twin house with typical features of the 1890s in a composition that is a blend of Queen Anne and Colonial Revival. It features a tan brick façade (over a brick base of red common brick) with dark brick trim, rock-faced brownstone lintels and slip sills, and other decorative stone details. The second story has a large projecting bay with a coved wood cornice and an imposing metal-finial-topped pyramidal roof set against the false mansard that otherwise crowns the brick façade wall. The windows are 1/1 double-hung wood, paired in both the center face of the projecting bay and in the first story. The basement is raised, treated the same as the wall above, and there are basement windows at the bottom of the façade. The entrance is a narrow, one-leaf door with a transom accessed by a set of steps with wrought iron railings. There are two interior end chimneys. This house differs from the other half of the twin design only in a few subtle details: the bottom of the projecting bay on the 415 Peyton Street side is flat with paired windows immediately below, while that of 417 Peyton Street forms a concave pendant shape, similar in appearance to the hull of a ship; the pendant shape extends down into the space between to window openings on that side of the design.

*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Colonial Revival, ca 1940**

November 2006: This two-story, two-bay Colonial Revival style house has a brick walls laid in American. The foundation is raised so that a basement window shows in the façade below the water table. The windows are 6/1 double-hung wood, except for a large three-sided bay window in the first story (apparently, a recent alteration), which has vinyl windows 6/6 muntin grills; the bay window also has a hipped roof. The original window openings have rowlock sills. The roof is a side gable with metal standing seam roofing. The entrance door has a surround that features a pediment and reeded pilasters. There is an exterior end chimney on the south wall with a shoulder to one side. A notation on the 1992 Sanborn map indicates that this house was constructed of cinder block with a brick facing.

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1890*

November 2006: This three-bay, two-story brick house has facing of butter-jointed face brick laid in stretcher bond on the front elevation. The windows are double-hung 1/1 wood with rock-faced limestone sills and lintels, and decorative brickwork connects the stone details: the lintels are connected by bands of pressed brick while the sills are connected by a similarly placed band of protruding brick. Although otherwise a typical brick town house for this district with a false mansard roof, the design is dominated by a second story projecting bay window with Queen Anne and Classical Revival style ornamental details that appear to be made of pressed metal. The ornamentation includes panels with a florid pattern below and above each window, very thin pilasters flanking each window with Scamozzi volutes at the tops, a pattern that resembles ovidarts at the curved bottom edge of the bay design, and a dentiled cornice at the top, crowned by a large pyramidal roof that is semi-octagonal in plan, and has metal shingles with a metal finial at the uppermost point. The house has a raised basement with a rock-faced limestone facing at the basement level up to a stone water table, and stone steps with wrought iron railings lead up to the entrance door, which has a transom. The house was built as half of a twin design, the other half being 424 Peyton Street, although there are differences in the design and treatment of the projecting bay windows from one house to the other.

November 2006: This two-story, two-bay, Colonial Revival style American Foursquare brick house with some Craftsman style influences has a hipped roof, exposed rafter ends, and paired windows in one bay of each story of the façade. The windows are double sash 6/1 wood, and each opening has a soldier course lintel, a rowlock sill, and decorative shutters. Sheltering the entrance door is a gable-roofed porch on very simple, slender Tuscan columns. The base of the porch is brick. It is accessed by a set of four steps and has wrought iron railings along the stairs and between the columns and the façade wall. There is also a large, enclosed, shed-roofed porch on the north side of the house.

*Primary Resource Information: Single Dwelling, Stories 1.50, Style: Colonial Revival, ca 1950*

November 2006: This three-bay brick "ranch type" Colonial Revival style house has a two-bay-wide gabled projecting one-story bay on the front. The windows are 8/8 double-hung wood in the first story and 1/1 vinyl in the half story above, and all have concrete sills and soldier brick lintels. A soldier course of brick forms a surround around the door which is accessed by a set of stairs with wrought iron railings to each side. There is an exterior end chimney on the house's south wall. This is an otherwise plain example, even for its type and era. A notation on the 1992 Sanborn map indicates that this house was constructed of cinder block with a brick facing.

November 2006: This five-bay, one-and-a-half story, side-gabled Colonial Revival style "ranch type" brick house has two gabled dormers that are clad in aluminum siding. The windows are 6/6 double-hung wood. The first story lintels are composed as two stacked sailor courses of brick. Each window has rowlock sills. There is a soldier brick course serving as a water table at the line of the first story floor. A metal awning covers the entrance, sheltering a slightly large, otherwise uncovered porch with a brick base and a wrought iron railing. The porch is accessed by a set of five steps with a wrought iron railing to each side. On the south wall of the house, there is an exterior chimney. A notation on the 1992 Sanborn map indicates that this house was constructed of cinder block with a brick facing.

November 2006: This three-bay wood frame house has a hipped roof except over a two-story portion of the front of the house that projects forward with a gable roof, one side of which is an extension of the north slope of the hipped form. The front gable of the projecting portion of the house has cornice returns. The house also has a half-hipped wrap-around porch with asphalt shingles and turned wood posts. At the top of the porch posts are bracket-like cut-out ornaments. The posts rest on a solid balustrade the surface of which is covered with aluminum siding. The remainder of the house is also clad in aluminum siding. The windows are double-hung 1/1 vinyl replacements, and each window opening is flanked by decorative metal shutters. The front door has a transom. There is a brick chimney at the center of the roof.

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1891*

November 2006: This Colonial Revival style two-story, two-bay house, originally built in wood frame as a corner store, was covered with used brick laid in American bond in a remarkably plain design in the 1940s (it is shown as a brick building on the 1958 Sanborn map). Brick façade walls face two perpendicular streets, Princess and North Alfred Street. The foundation is not visible. The walls rise from grade to an aluminum-capped parapet that conceals the presumably flat roof. The windows are double-hung 1/1 wood sashes with concealed lintels and rowlock sills. The entrance door is accessed by a set of three steps with a wrought iron railing to each side.

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1880*

November 2006: This two-and-a-half story, two-bay, side-gabled frame house has German siding, an old standing seam metal roof, and a wide shed dormer with a pair of windows. All windows in the façade are double-hung wood 1/1 sashes. The foundation is not visible. Across the front of the house is a one-story, two-bay porch with a low-pitched shed roof. At the base of each porch column is a slender, square, concrete pier that rises to about 30 inches above the porch floor. In place of a balustrade, the porch has a low brick wall, only about three courses of brick tall above the porch floor, with a thin stone cap. Each end of the porch has wood lattice above a solid balustrade. The entrance door has a large light of glass in the upper half, extending down to just below the midpoint of the door. Although the house appears to have been constructed in the late 19<sup>th</sup> century, the porch details (low shed roof, square columns, concrete piers, lattice at sides, etc.), the entrance door, and the shed dormer are all examples of details typical of the Colonial Revival style in the late 1920s through the 1940s, apparently the result of a remodeling project at that time.

**917 Princess Street    100-0133-1021**  
*Primary Resource Information:* **Church/Chapel, Stories 3.00, Style: Romanesque Revival/Richardsonian, ca 1900**

November 2006: This four-bay Romanesque Revival- style church building, containing Third Baptist Church, the oldest congregation and also the oldest religious building in the district, is constructed of common brick walls in American bond with a façade of butter-jointed, water-treated-extruded face brick crowned with a pressed metal cornice with decorative parapet ends. At the corner of the façade, where Princess Street meets North Patrick Street, is a three-story-tall tower with a hipped roof. The front entrances are in a two symmetrically placed, slightly projecting narthex bays, each of which has with a gabled parapet and stone details. Within each narthex bay, the doors are set in a round-arch and are accessed by about three brick steps with wrought iron railings; the doors themselves and the transoms above them are recent replacements of tinted glass with anodized aluminum frames. The building's arched openings at most doors and windows have triple rowlock brick, although a few openings have stone lintels. Connecting the openings are stone belt courses that double as sills. In the in the gable end is a round window, and below it, just above the two entrances, is a row of round-arched window openings with stained glass. The church's side elevations are common brick with segmentally arched openings with stained glass reflecting a three story interior (raised basement and sanctuary with balcony). Between the openings are brick pilasters that step in as buttresses. The different character of the brick and different in window shapes may be evidence that the building's secondary elevations are older than the façade; the church was reportedly destroyed in a hurricane in the mid-1890s.

**1000 Princess Street    100-0133-1029**  
*Primary Resource Information:* **Single Dwelling, Stories 2.50, Style: Greek Revival, 2004**

November 2006: This two-and-a-half story, three-bay frame house is one of the newest buildings in the district despite its numerous historic-looking characteristics. The Princess Street house closely duplicates a number of key architectural characteristics that were uniquely found in this area in the historic Lee-Fendall House at the corner of Oronoco Street and North Washington Street. Though built in 1785, the Lee-Fendall House was heavily remodeled in the 1850s. Following the blend of details found at its predecessor, the Princess Street house is stylistically a blend of features that are characteristic of the Greek Revival and Italianate styles, as well as some features found more often in later Classical Revival style houses. Clad in composition weatherboard-style siding, it has dominant corner boards that extend along the first two stories to a tall horizontal line of wood trim, or frieze, at the presumed ceiling level of the second story. Just below the frieze, the tops of the corner boards are treated as capitals, an effect created by two bands of applied moldings. Above the horizontal line of trim is a row of four-foot-tall square windows with diamond-lattice muntins, separated by areas of smooth siding (apparently butt-jointed boards). The windows are 4/4 double-hung wood. The above characteristics are found on two three-bay facades, one facing Princess Street and the other facing North Patrick Street. The roof is hipped with a metal standing seam. The Princess Street elevation is extended to the west by a three-to-four-bay, two-story gabled ell which has 6/6 wood windows and an entrance door with a transom and sidelights in the bay closest to the taller, three-story, hip roofed form. The foundation is brick laid in stretcher bond.

**1013 Princess Street      100-0133-1026**  
*Primary Resource Information:* **Single Dwelling, Stories 3.00, Style: Italianate, ca 1980**

November 2006: This is a three-story house built in the 1980s with a design that attempts to mimic the form of historic houses in the neighborhood. The third story has a front wall of sloped windows and panels designed to resemble a mansard. Supporting the mansard form is a cornice with brackets and dentils. More than half of the first story is a garage. The brick walls are laid in stretcher bond with soldier brick belt course in line with the second story floor. The window openings have rowlock sills, and most façade openings have soldier course lintels. The entrance door is in a glazed section of tinted glass wall that might have been constructed as an alteration of the original design, as it has a concealed lintel and is taller than the garage door opening next to it. The foundation is not visible. The windows are double-hung 1/1 sashes believed to be aluminum.

November 2006: This two-story, two-bay frame town house built in 1998 by Habitat for Humanity has several simplified features modeled after the numerous late-nineteenth century frame town houses found throughout the district. The exterior is clad in wood German siding, and the house has tall wood lintels with a thin strip of drip molding at the top, a wood cornice with dentils and modified brackets, fluted pilasters flanking the door in the door surround, and a three-light transom over the door. The door is accessed by a two-step concrete stoop with a metal railing. The house is identical in design to the adjoining houses that occupy 1109 and 1111 Princess Street, which were also built by Habitat for Humanity in 1998.

**1112 Princess Street 100-0133-1038**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay, Italianate style, frame, semi-detached town house has weatherboard siding. It is unusual in the way it sits back from the street on a slightly raised site surrounded by a wrought iron fence, by contrast to the roughly contemporary adjoining house to which it is attached, which is near the edge of the street in line with several stylistically similar frame town houses of the same era. The foundation is not visible. The façade rises to a false mansard with a metal finish (not completely visible). The windows are 1/1 double-hung wood. There is a transom over the door, and the door is accessed by a couple of steps that rise from a sidewalk that traverses the small but enclosed front yard.

**1116 Princess Street 100-0133-1040**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1870**

November 2006: This two-story, two-bay, Italianate style, frame town house has wood German siding and a false mansard with asphalt shingles. The exposed area of the foundation is parged. A projecting cornice is found at the base of the false mansard. The windows are double-hung 1/1 wood sashes, and there is a metal grate over the first story window. This house shares an alleyway with 1116.5 Princess Street. The appearance of the alleyway design is unusual in that, while it roughly overlaps the two parcels equally, the portion of the 1116 Princess Street that overhangs it has an angled form meeting a rectangular opening at the adjoining house. The main entrance door to 1116 Princess Street is accessed by a stoop with about four steps and a wrought iron railing.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1958**

November 2006: This two-story, two-bay, freestanding, brick town house is a cubic-looking form, as is typical of buildings built in the district toward the end of the period of significance when the tradition of building Colonial Revival style town houses on vacant parcels in the district fell under the influence of the Modern Movement. The exterior brick walls are laid in American bond and rise in a single plane from a raised basement to an aluminum-capped parapet that conceals the flat roof. The entrance door, which is sheltered by a metal awning supported by decorative metal rods over a small porch, is accessed by a set of about eleven steps with a dogleg and a wrought iron railing. In each story, there is a single window opening in the bay next to the entrance, each with tripartite double-hung wood sash windows that have false muntins that appear to vary from 1/1 to a 4/4 pane pattern. The house is otherwise remarkably plain in design. The house was built of concrete block with brick facing, according to the 1958 Sanborn map.

*Primary Resource Information:* **Office, Stories 2.00, Style: Modern Movement, ca 1970**

November 2006: This Modern Movement style Social Service building was constructed in 1975 of brick laid in stretcher bond over a concrete block base structure (according to the 1992 Sanborn map). The foundation is not visible. The windows throughout the building are fixed panes of one light of tinted glass each with anodized aluminum frames. The roof is flat, concealed behind a parapet with an aluminum cap. The main entrance is at the corner entrance, recessed in a large inset entry area that serves the same purpose as a porch. A steel column supports the overhanging corner of the second story above the inset area. In the second story, the windows of the two main elevations, facing Princess Street and North Payne Street, meet at a steel mullion with an anodized aluminum finish.

November 2006: This two-and-a-half story, four-bay, gable-roofed, frame house has a Craftsman-influenced but simple design. The house's front entrance door faces North Payne Street, but the gabled primary elevation is on Princess Street and the house has a Princess Street address. This house is clad in composition board siding and has a one-bay by one-bay inset porch with a single square wood post supporting the second story at the southeast corner of the house. The windows are double-hung 6/6 wood sashes. Near the peak of the roof on the side opposite Princess Street, a metal flue that serves as a chimney rises from the east face of the roof. The half-story top floor is only apparent in the gable end windows. At the base of each gable end, forming a triangle with a roof form that barely projects at the eaves, is a horizontal band of trim that provides a subdued line, more characteristic of the Shingle style than the pedimented gable end found with deeper eaves in some other styles.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, three-bay, semi-attached Italianate style frame house is clad in beaded weatherboard siding and has double-hung 6/6 wood sash windows and a slate-clad false mansard supported on a wood cornice with brackets and large dentils. The foundation is solid parged concrete. The window and door openings have minimal wood trim. The door is accessed by a set of five wooden steps with a wooden handrail. The house is very similar to its attached twin at 1318 Princess Street, apparently built at the same time.

November 2006: Contributing in the area of architecture, this is one of many examples in Alexandria of a box-like two story frame building with some Italianate details, the most common form built in the district in 1860-1890. This particular example is known to have been built as late as 1909, as part of a complex of eight houses (401-411 North West Street and 1317-1315 Princess Street). The builder/developer for these houses was William H. Peck, a developer who is known to have built several other buildings in the district. The architect for these houses was W. Leon Clark, as listed with Peck in the city's building permits for the houses. The staff members of the Alexandria Department of Planning and Zoning assigned to the Parker-Gray Historic District Board of Architectural Review have prepared staff reports on several houses in this grouping when renovation projects were proposed to the board. The documents are available online.

November 2006: This building is part of Jefferson Village, a complex of 34 town houses and six apartment buildings of six apartments each, all built in 1988. The complex occupies a self-contained site between West North Street, Princess Street, and Boyle Street, with Jefferson-Houston Elementary School occupying the adjoining parcel to the south. All the Jefferson Village buildings are constructed of matching gray-brown brick laid in American bond, and the complex's separateness from the rest of the historic district is not only reflected in its distinctly different architectural appearance, but it is also reinforced by the buildings all being set back from the street. It is especially separated from West North Street by a parking lot for the residents, and the town house units face away from Boyle Street and have garden walls enclosing back yard patios on that side. Among the town houses, which are arranged in contiguous rows of six to ten residences, the units appear in pairs with alternating setbacks between the pairs (in other words, every other pair of units is set slightly further back from the ones to the right and left of it). The row houses have side-gabled roofs with asphalt shingles, with a common roof surface extending across each pair of units on each face of the gable. Like the others in the row, this two-bay unit has an arched entry with an arched surround of protruding brick edges, similar to rowlock sills. The window and door openings, however, have cast concrete sills. The windows are three-part units of mill-finished aluminum consisting of a hopper window at the bottom and a pair of casements above it, each of which has only one pane of glass.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Craftsman, ca 1990**

November 2006: This frame house with weatherboard siding was built after 1992. It adjoins 1401 Princess Street, creating a party wall at the original west exterior wall of that house, and it was designed in a way that makes it look like an addition to the older house. The house's details are reminiscent of the Craftsman style, Shingle style, and Colonial Revival style, perhaps in an effort to match the style of the older house. The foundation is constructed of concrete block. Facing to the west is a one-story, one-bay gabled porch with square posts. Facing Princess Street there is a small first story projecting bay window with a pair of double-hung sashes; the roof of the bay serves as a second story balcony with a patio-style two-leaf, one-light-per-leaf French Door leading out onto the balcony, which is surrounded by a wood balustrade with square balusters. The house's windows are 1/1 double-hung wood. The roof is hipped with asphalt shingles. The house faces into a vacant lot to the west. A multi-bay section of the house to the north is designed as a slightly smaller, flat-roofed extension of the main mass of the form.

1988. The complex occupies a self-contained site between West North Street, Princess Street, and Boyle Street, with Jefferson-Houston Elementary School occupying the adjoining parcel to the south. All the Jefferson Village buildings are constructed of matching gray-brown brick laid in American bond, and the complex's separateness from the rest of the historic district is not only reflected in its distinctly different architectural appearance, but it is also reinforced by the buildings all being set back from the street. It is especially separated from West North Street by a parking lot for the residents. The six apartment buildings, of which this is one example, have shared party walls and appear in a staggered row along the south edge of the site, between the town houses and the neighboring school. The row steps in and out, with all but one of the buildings oriented with the long axis running north south; the sixth building, at the west end of the row, is oriented perpendicularly, forming an ell shape. Each apartment building is seven bays wide and three stories tall, with a side-gable roof clad in asphalt shingles. The bottom floor has shorter windows, with sills close to the ground, indicating a floor level that is a few feet below ground. The windows are paired casements in mill-finished aluminum frames; the paired casement is found by itself in the shorter openings of the bottom story, while the second and third stories have a hopper window at the bottom. The center bay of each building is recessed about 4 inches and contains a doorway and transom in a round-arched opening with a protruding brick surround. Above the doorway is a window located between the second and third story fenestration lines, an indication that the center bay contains a staircase. In front of the buildings, there is a band of grass with some segments of hedge and one or more medium-sized trees.

November 2006: This brick Bungalow/Craftsman style may be described as the most highly developed example of this style in the Uptown/Parker-Gray Historic District. Above its first floor and raised basement, it has a two-story-tall side-gable roof which becomes asymmetrical and concave as it extends over the partially enclosed front porch. The roof has terra-cotta Spanish (barrel) tile (one of the only examples of this material in the district), as well as with exposed rafter ends at the bottom edge of each slope and knee brackets in the eaves of the gable ends. Centered in the façade is a second story, gabled, wood-frame bay window with a bank of three double sash windows, sprocked eaves, exposed rafter ends, and knee braces. The foundation is raised enough that short basement windows, set in segmental arches, can be seen in the side elevations. The walls are brushed/textured brick from grade to the peak of each gable end. Across the facade is a porch with brick piers. A one-bay by one-bay area of the porch is open leading to the house's entrance. In that section, the brick piers are connected by a round arch at in both the façade and east side elevation. The remaining 2/3 of the porch is enclosed with double-hung windows that match the others in the house except that the four banked windows in the porch's south-facing (façade) enclosure have individual transoms. Throughout the house, the windows are 4/1 double-hung wood sash bungalow windows with vertical lights in the upper half. In the west gable end is an interior end brick chimney. The east gable end wall has a first story brick projecting bay window which is rectangular in plan and has a shed roof, and next to it a semi-hexagonal overhanging wood bay window with a hipped roof, which is situated between floor levels, apparently at the landing of the stairs. The garage behind the house is a matching design with the same kind of roof tile and brick. It is the highest style garage in the district.

November 2006: This two-bay brick row house is part of a group of brick houses built in pairs, or "twins," that continues with the same design along for four pairs along Princess Street and several others along Boyle Street, the next street to the south. Each house has a cubic, flat-roofed form with brick walls laid in American bond that rise in a single plane from grade to form a parapet concealing the roof. The windows are double-hung 6/6 vinyl sashes with decorative shutters. Each window opening has a rowlock sill and a concrete lintel. The design also features brick quoins and a decorative brick cornice with dentils at the base of the parapet. The parapet has a terra cotta coping. The basement is raised, allowing for nearly square windows at grade. The front door is accessed by a two-bay shed-roofed porch with asphalt shingles on turned wood posts connected by a plain wood balustrade with square balusters. A set of six steps with a wood railing to each side leads down to grade from the porch. The area under the porch, between brick piers, is enclosed with lattice. This building is a twin with 1602 Princess Street.

November 2006: This three-bay, two story, Colonial Revival style brick row house is part of a row of seven matching houses with some variety in decorative details from unit to unit but designed to appear as one symmetrical design. This house has some cast concrete details including an architrave door surround. The brick walls are laid in American bond and have concealed lintels at the window openings and very thin cast concrete sills. The windows are double-hung 6/6 wood sashes. The entrance door is accessed by a small stoop. The roof is a Colonial Revival style variation on the false mansard, with slate roofing, behind which is a flat roof. This is the easternmost address in the row. The east wall of the house rises above the roof form on the same angle as the slate front slope of the roof giving the appearance of a row building firewall. The row is on a slightly raised site, with a brick retaining wall and/or embankment with chain link fencing at the edge of the sidewalk, and three or four concrete steps at each address leading up to the lawn in line with the stoop and door. This house has a chain link fence around the front yard. The 1992 Sanborn map indicates that this house was built of cinder block with a brick facing.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1945**

November 2006: This two-bay brick row house is part of a group of brick houses built in pairs, or "twins," that continues with the same design along for four pairs along Princess Street and several others along Boyle Street, the next street to the south. Each house has a cubic, flat-roofed form with brick walls laid in American bond that rise in a single plane from grade to form a parapet concealing the roof. The windows are double-hung 1/1 wood sashes. Each window opening has a rowlock sill and a concrete lintel. The design also features brick quoins and a decorative brick cornice with dentils at the base of the parapet. The parapet has a terra cotta coping. The basement is raised, allowing for nearly square windows at grade. The front door is accessed by a two-bay shed-roofed porch with asphalt shingles on turned wood posts connected by a plain wood balustrade with square balusters. A set of six steps with a wood railing to each side leads down to grade from the porch. The area under the porch, between brick piers, is enclosed with lattice. This building is a twin with 1600 Princess Street.

November 2006: This three-bay, two story, Colonial Revival style brick row house is part of a row of seven matching houses with some variety in decorative details from unit to unit but designed to appear as one symmetrical design. This house has some cast concrete details including an architrave door surround, cast concrete flared lintels, and a built-in cast concrete flower box at the second story window opening. The brick walls are laid in American bond and have very thin cast concrete sills at the first story window openings. The windows are double-hung 1/1 wood sashes, paired in a single opening in the second story. The entrance door has a cast concrete keystone over the door opening. The door is accessed by a small concrete and brick stoop with a wrought iron railing sheltered by a metal awning. The roof is a Colonial Revival style variation on the false mansard, with slate roofing, behind which is a flat roof (the slate roofing is continuous across the next address in each direction to the east and west). This is the second house in from the east in the row. The row is on a slightly raised site, with a brick retaining wall and/or embankment with chain link fencing at the edge of the sidewalk, and three or four concrete steps at each address leading up to the lawn in line with the stoop and door. November 2006: This two-story, four-bay by six-bay, corner store building, once the location of the Northwest Pharmacy, is three bays wide along Queen Street (the second story of the Queen Street façade has four window bays) with a wood cornice at the first story and a wood cornice at with egg and dart details at the base of a parapet concealing the roof. There is a corner entrance, angled at the intersection of the sidewalks that follow Queen Street and North Patrick Street. The walls are extruded, water-treated brick with thin joints laid in seven-course American bond with a Flemish bond pattern at the bonding lines. The angled entrance has a two-leaf door (which is a replacement), to each side of which is a three-light plate glass display window unit (on each street façade) that projects out onto the sidewalk a little over 12 inches. Above the plate glass in the unit is a two-light transom. There is a stone or cast concrete band at the sills on the upper story and stone or cast concrete lug lintels that are as tall as four courses of the brick. The lintels have ornamental stone segments at each bearing edge of each lintel. The ornamental stone are the same height as three courses of the brick. The Queen Street doorway leading to the upper story area has a round-arched transom and a stone keystone in an otherwise brick arch. The second story windows, as well as some first story ones along North Patrick Street, are double-hung 1/1 wood sashes.

This two story, three-bay, side-gabled, frame house has details that are characteristic of construction in the district when the Greek Revival style was in vogue, although some details, such as the wood German siding, are more often found with later styles. The house has dentils in its door surround and in a wood cornice at the top of the façade. There is a six-light transom over the door, and the windows have shutters with shutter dogs. Below the first story floor line is a raised basement of parged masonry, placing the first floor at about five feet above grade, which is unusually high for buildings in this district, particularly in the case of nineteenth-century side-gabled frame houses. There is a separate entrance to the basement, and the first story entrance is accessed by a set of nine wood steps and a small wood stoop with a post-to-post wood balustrade. The windows are 6/6 double-hung wood. The house shares a common wall with 1009 Queen Street, which is similar in design. The 1863 birds-eye view map of Alexandria does not appear to show a house at this location at that time.

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1875*

This two story, three-bay, side-gabled, frame house has details that are characteristic of construction in the district when the Greek Revival style was in vogue, although some details, such as the wood German siding, are more often found with later styles. The house has dentils in its door surround and in a wood cornice at the top of the façade. There is a six-light transom over the door, and the windows have shutters with shutter dogs. Below the first story floor line is a raised basement of parged masonry, placing the first floor at about five feet above grade, which is unusually high for buildings in this district, particularly in the case of nineteenth-century side-gabled frame houses. There is a separate entrance to the basement, and the first story entrance is accessed by a set of nine wood steps and a small wood stoop with a post-to-post wood balustrade. The windows are 6/6 double-hung wood. The house shares a common wall with 1007 Queen Street, which is similar in design. The 1863 birds-eye view map of Alexandria does not appear to show a house at this location at that time.

**1010 Queen Street 100-0133-1144**  
*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Italianate, ca 1880*

November 2006: The dominate feature of this two-story, two-bay, shed-roofed, aluminum-clad, Italianate style frame town house is a two-story, three-sided, semi-hexagonal projecting bay window. The house has beaded weatherboard and double-hung 2/2 wood windows with peaked lintels and otherwise plain trim. Unlike other houses of this type, style, and time period in the district, this one has only a minimal band of wood, slightly projecting, in place of the usual cornice with brackets, and the entrance doorway has no transom. The foundation is not visible and there is no front porch.

*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Italianate, ca 1880*

November 2006: This two-story, three-bay, Italianate style frame town house is a twin to 1013 Queen Street; the two houses were apparently built together as one project and remain identical in design. Both are clad in wood German siding and have a brick foundation laid in American bond, a wood cornice with brackets and dentils, double-hung wood 2/2 windows with projecting lintels supported on brackets, and a transom sheltered by a door hood with brackets. The entrance door of each house is accessed by a three-step brick stoop which does not have a handrail. There is rolled asphalt on the side elevations.

**1012 Queen Street 100-0133-1145**  
*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Greek Revival, ca 1860*

November 2006: This two-story, two-bay, side-gabled frame row house has beaded weatherboard, double-hung 2/2 wood sash windows, very modest trim around the door and window openings, and a crown molding cornice. The roof has asphalt shingle roofing. The design of the exterior is remarkably simple and reflects the construction characteristics of the simpler houses when the Greek Revival style was in vogue. The 2/2 windows are probably reflective of a remodeling project occurring ca.1870-1880, when the Italianate style, of which this window style is often indicative, was popular.

November 2006: This two-story, two-bay, shed-roofed, Italianate style frame row house has weatherboard siding, double-hung wood sash windows with 2/2 horizontal panes, a bracketed cornice at the top of the facade, and a metal grate over the entrance door which accessed by a concrete stoop. The foundation is solid, constructed of brick laid in American bond. A strip of metal or wood forms a drip molding over the entrance door, possibly the remnant of an awning or a similar feature. The house is the same size as and paired with 1016 Queen. Although the two houses share a common wall and both sides have the same number of window bays and style of cornice, most other details been changed in ways that the two houses now look distinctly different from one another.

**1101 Queen Street      100-0133-1153**

*Primary Resource Information:* **Store, Stories 2.00, Style: Moderne, ca 1939**

November 2006: This Art Moderne style theater building, a segregated facility for African Americans built in 1929 and known as the Capitol Theatre, is constructed of buff colored brick with contrasting red brick details at the second story and at the parapet. The building's most prominent feature is its boldly rounded corner at the intersection of Queen and North Henry Streets. The curved wall, which is accentuated by the striped appearance of the alternating brick colors was originally part of a design that included a movie theater marquee anchored to the curved section of wall and a doorway centered in the rounded corner (the marquee has been removed or reduced in size to serve as a commercial sign and the doorway has been in-filled with brick). The parapet, which steps up in two stages at the rounded corner and also conceals the roof, has a terra cotta coping. The building has only a few original window openings, narrow single-light casement windows, with openings placed near each other so that they appear as pairs, though separated by a section of brick wall about 30 inches wide. The entrance is a commercial glazed door in a mill-finished aluminum frame with sidelights and a transom, near the corner. There is some evidence of other first story openings that have been closed-in with brick or covered with metal security features that obscure the underlying materials. The building has been completely rehabilitated in the time since the fieldwork was completed for this project, and it now contains a number of additional window openings across the first story. The 1992 Sanborn map for the city indicate that the structural system is actually concrete block walls with a brick facing and a concrete and steel floor deck on steel joists.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1875**

November 2006: This two-story, three-bay, frame house has wood German siding, a side-gable roof with standing seam metal roofing coated with tar, a wood cornice with brackets and dentils at the top of the facade, double-hung 2/2 wood sash windows, and a door hood on brackets. In the east side elevation, there is a four-light window in the gable end and one or two other styles of windows in the first two stories and in an ell that extends to the rear. An interior end chimney with a corbelled cap rises from the west gable end of the house. At the time that the survey was undertaken, the lot was enclosed by a chain link fence for construction purposes, the entrance door was boarded up, and the house was in the midst of a major remodeling project.

**1120 Queen Street                    100-0133-1168**  
*Primary Resource Information:* **Church/Chapel, Stories 2.00, Style: Art Deco, ca 1948**

November 2006: This three-bay former theatre building (now serving as a church) is one of the most important examples of the Art Deco style buildings in the Uptown/Parker-Gray Historic District. The entrance to the building dramatically fills a corner parcel between the auditorium, which is the adjoining section of the building to the south along North Fayette Street and a row of Art Deco style storefront spaces built at the same time along Queen Street (1112-1118 Queen Street). Creating a monumental effect, towers that are nearly four stories in height and form flowing, wavelike curves in plan flank the central entrance bay to the lobby, creating layers of emphasis. The entrance bay has a bank of two pairs of glazed doors, with a blank wall between them (either originally for displaying posters, or evidence of a bricked-in third door opening), all under a nearly semi-circular, curved canopy with a shiny metal facing. Above the canopy, three two-story tall panels of glass block, the center one being in Palladian fashion wider than the flanking two, give the façade a focal point. Above them is a stepped parapet that rises slightly above the tops line of the towers. It has two double-leaf entrances at the corner and feature stepped lintels. There are decorative glass block square patterns in the center area of each panel of glass block.

**1125 Queen Street                    100-0133-1160**  
*Primary Resource Information:* **Store, Stories 1.00, Style: Other, ca 1960**

November 2006: This is a one-story, two-bay, flat-roofed, brick storefront building, originally designed as a commercial example of Modernist minimalism. Brick piers (actually, the front edges of walls oriented perpendicular to the façade), now appearing as pilasters in the façade, originally outlined the larger display window bay and the much smaller, recessed entrance bay to the north of it. Twelve or fifteen courses of brick laid in American bond connects the piers below the original opening of the display window bay. Where the large glazed area of the display window had been, the opening has been greatly reduced by brick infill using brick of variegated color, so that the only window now is a row of three small square openings just above eye level, separated by mullions. The entrance door is glass with a mill-finished aluminum frame. Several other layers of remodeling materials are apparent, such as a panel of painted brick infill above the entrance door, a band of horizontal planks at the top of the window bay, and an asymmetrical plywood sign covering the edge of the roof parapet with a white background and black letters saying "SGT. RESTAURANT Inc. / HOME COOKED SOUL FOOD \* CARRY OUT \* FAST SERVICE", present and features replacement windows and moldings. All the openings have metal grates, the entry is recessed, and above the sign band there is a floodlight fixture on a gooseneck arm. The building suffered a fire while the survey project was underway.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1880**

November 2006: This two-story, two-bay frame house from ca.1880 has a mid-twentieth century altered façade of brick veneer following a stretcher bond pattern with PermaStone quoins and brick soldier course lintels. At the top of the façade is a plain wood cornice clad in aluminum panning. The windows are double-hung 1/1 vinyl, occurring in a pair flanked by shutters in the upper story façade and as a tripartite ensemble in the first story. The entrance door is flanked by fluted pilasters and is accessed by a six-step brick stoop with a wide brick landing and brick planter at the bottom step and a wrought iron railing.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1995**

November 2006: This recently constructed two-story, two-bay, side-gabled frame house clad in weatherboard was designed to appear as an ell-shaped addition to 1209½ Queen Street, set back a few feet, enough to create a small garden space with shrubbery that hides the entrance door. The foundation is raised, constructed of brick laid in American bond. The windows are double-hung 1/1 wood sashes. The roof has standing seam metal roofing. The roof form creates an intersecting gable with the 1209.5 Queen. Centered in the north the north half of the east side elevation, past the ridge of the roof, is a chimney with a corbelled cap. The parcel house occupies was vacant in the 1992 according to the Sanborn map, but by that time, a house already occupied 1209½ Queen Street.

*Primary Resource Information: Multiple dwelling, Stories 2.00, Style: Colonial Revival, ca 1910*

November 2006: This two-story, three-bay brick building was built in 1909-1910 and served an industrial use for many years as a large-scale laundry facility. While the survey was underway, it was in the midst of construction for conversion to a multiple dwelling (condominiums). The building features tan-toned brick with brown cast stone keystones and sills. There is central brown cast stone panel above the door. The windows are rectangular double-hung 2/2 wood sashes set into segmentally arched openings with three-course rowlock brick comprising the arches. The front entry, also a rectangular form in a segmental arch, into the building is a two-leaf door at the center of the facade. At the top of all the perimeter walls, the brick rises as a parapet and forms a richly detailed brick cornice. A third story was added as part of the conversion. Constructed of wood, glass, and similar materials, it is recessed so that it is barely visible from the street. The building now has a "green roof" and other similar features. The main entry has been moved to the east side elevation, and the steps leading up to the no-longer-used front entrance have been converted to planters.

November 2006: This two-story, two-bay, Colonial Revival style brick row house is part of a row of five matching houses that are set back twenty-five feet from Queen Street, with a paved parking pad in front of each house. Four of the houses are attached as a row, while one is freestanding. The five houses have walls laid in American bond, a cornice with dentils and brackets at the top of the façade as a decorative treatment of a parapet that conceals the roof, concealed lintels, and rowlock sills. The 1992 Sanborn map indicates that the actual structural system of the row is concrete block with a brick facing. At 1319 Queen Street, the windows are double-hung 6/6 wood sashes with decorative shutters. The entrance door has a pedimented surround that incorporates fluted pilasters and a tall frieze. Located at the western end of the four attached houses in the row, this house is an identical mirror image of the house at 1315 Queen Street, the easternmost of the four adjoining houses.

=====  
*Primary Resource Information: Single Dwelling, Stories 2.00, Style: Victorian, Queen Anne, ca 1880*

November 2006: This two-story, two-bay frame town house features a two-story, rectangular, projecting bay with paired windows in each story in its south face. At the top of the façade, in front of a false mansard form over the main mass of the house, the projecting bay has a deep, cornice-like overhang which is crowned with a pedimented gable end that is slightly narrower at its base than the width of the bay below. The tympanum of the pediment has ornamentation that includes: decorative barge boards, fish-scale shingles, and other details derived from the Queen Anne style. Although, this frame house, with its false-mansard roof is otherwise a late example of the variations on, and blends of, the Italianate and Second Empire styles found in frame row houses in the district, details such as these speak to how later styles from the 1890s were also incorporated into the town house prototype. The foundation is raised, constructed of masonry that has been parged. The siding is weatherboard that matches in profile and color that of the attached house on the adjoining parcel (301 West North Street). The windows are double-hung 1/1 wood sashes. The door is accessed by a set of six concrete steps. The house is similar in design to the adjoining house (301 West North), and it appears to be possible that the two have been combined into one residence, but they are treated here as separate resources.

November 2006: This three-bay, two story, Classical Revival style brick row house, with some Colonial Revival style details, is part of a row of six matching houses with some variety in decorative details from unit to unit but designed to appear as one symmetrical design. The houses match those behind them (on the north side of Princess in the 1600 block) and also the ones within view that face east along Earle Street. The row is on a slightly raised site, with three or four concrete steps at each address leading up to the lawn in line with the stoop and door. The 1992 Sanborn map indicates that the houses were built of cinder block with a brick facing. This house has some cast concrete details including an architrave door surround and cast concrete flared lintels over the second story window openings. The brick walls are laid in American bond and have very thin cast concrete sills at the window openings. The windows are double-hung 1/1 vinyl. The entrance door is accessed by a small concrete and brick five-step stoop with a wrought iron railing. The roof is concealed by a parapet that contains two rectangular cast concrete panels, each with a swag pattern on the surface, one over each second story window opening. At the base of the parapet is a band of ornamental brickwork consisting of a row of protruding stretchers at the top and bottom between which is a soldier course and a row of brick dentils. The parapet conceals a flat roof. This is the easternmost house in the row.

**120-122 West Street North 100-0133-1208**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1980**

November 2006: November 2006: This Colonial Revival style building is two houses built as a pair of mirror-image twins that share a center wall and appear as much like one building as they do like two. The exterior walls are brick laid in stretcher bond. The foundation is raised, part of the same brick wall and in the same plane as the upper portions of the façade. The roof is a side gable there is an interior end chimney at the each end of the house, north and south. The differences between the two houses are minor details at the entrance doors: 120 has a four-light transom and a nearly semi-circular fan panel at the top of the door surround, while 122 has a three-light transom and a triangular pediment at the top of its door surround. The windows are all double-hung sashes with rowlock sills, soldier brick lintels (first story only), and decorative shutters. Although the windows all look similar from a distance, there are subtle differences: 120 West North Street has false muntin grills, 6/6 in the second story and 6/12 in the first (some sections of which were missing when the building was photographed), 124 has what appear to be 2/2 horizontal panes in the second story, and 1/1 in the first. Accessing each house is a six-step brick stoop with a wrought metal rail. The two stoops are arranged back-to-back to create the effect of a monumental double stairway.

**124 West Street North 100-0133-1209**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1890**

November 2006: This two-story, three-bay frame house clad in weatherboard is stylistically a blend of an Italianate style form, some Queen Anne style details, and Modern-era exterior materials that are somewhat Colonial Revival style in character. The foundation is raised, constructed of brick. The windows are 1/1 double-hung wood. In general, the windows, which appear to date from the 1970s, appear to have proportions that are slightly too short for the wall areas where they are located. Next to the entrance bay, there is a one-story, rectangular, projecting bay window in the façade with paired windows in its east face. It has a hipped roof with brackets. At the top of the façade is a wood cornice with brackets and dentils supporting a short, slate-surfaced false mansard at the front edge of what is otherwise a shed roof. The door has a transom and a wide band of painted trim that suggests that the opening may have been reduced in height at some point or that a door hood was removed. It is accessed by an eight-step cast iron stoop with a post-to-post pipe railing and ornate newel posts modeled after turned wood profiles of the 1870s.

**128 West Street North 100-0133-1210**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1940**

November 2006: This two-story, two-bay, freestanding, brick town house represents a blend of Italianate style influences, such as the overall form of the house and the segmentally arched openings, with elements of the Colonial Revival (parapet with decorative panels and a crown molding cornice) and Queen Anne styles (the height of the parapet and the brick belt course at its base, as well as the double-rowlock-course arches). Surprisingly, despite its nineteenth century stylistic appearance, it first appears on the Sanborn maps for the city in 1941, and was therefore constructed at some point after 1921. It has bonded brick walls constructed of common brick laid in American bond. The foundation, an extension of the same brick planes as above, is raised enough to have exposed square basement windows with arched openings. The façade rises to a double stretcher course band of protruding brick at the second story ceiling height, above which the wall continues about twelve courses to form a parapet which is trimmed at the top by a crown molding cornice. The windows are rectangular 1/1 vinyl replacement units in segmentally arched opening, paired in a single opening except in the basement and in the bay above the entrance door where the opening is the width of a single window. The openings have rowlock sills and double sailor courses (double rowlock courses) of bricks forming the segmental arches. The entrance door is accessed by a stoop with a wrought metal rail. The face of the parapet has three ornamental wood panels, designed to appear as raised panels designed to appear in an enlarged and exaggerated form.

**225 West Street North      100-0133-1217**

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1877**

November 2006: This two-story, two-bay, Italianate style frame town house is part of a row of adjoining houses, most which appear to have been built at the same time. The row appears to have been built shortly after the 1877 Hopkins map was developed. This house, the southernmost address in the row, differs from the others in having a different setback and having a false mansard roof while the others have only cornices at the top edge of a shed roof. The false mansard, which is supported on a wood cornice with dentils and brackets, is a little taller than most others in the district. The house is clad in aluminum siding and has 6/6 vinyl windows sheltered by metal awnings and flanked by decorative metal shutters. The entrance door has an altered surround, and the opening appears to have been shortened by closing in the transom. The door is accessed by a small four-step concrete stoop. Next to the stoop, a low brick wall lies parallel to and just forward of the foundation. The wall serves as a planter box also a way of disguising the foundation, although a short section of parged foundation masonry is visible just below the bottom edge of the house's siding.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1877**

November 2006: This two-story, two-bay, Italianate style frame town house is part of a row of adjoining houses, most which appear to have been built at the same time. The row appears to have been built shortly after the 1877 Hopkins map was developed. This house, the second address in from the south in the row, is the first of five adjoining houses that appear to have originally had the same design. The house is clad in wood weatherboard siding and has double-hung 2/2 wood windows with horizontal panes. At the top of the façade is a wood cornice with stylized dentils and a small bracket at each end. The house has a parged masonry foundation, a modest set of concrete steps accessing the entrance, and a six-panel steel replacement entrance door. Otherwise, it has a remarkably simple and plain façade.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Post Modern, ca 1988**

November 2006: This is a new frame house with an asphalt-shingled hip roof and central interior chimneys. It has a solid foundation constructed of brick, is two-bays wide, and features inset porches of differing sizes in each story. The porches are at the northwest corner of the house, where it faces both North West Street and Queen Street. The lower porch, the larger of the two, is accessed by a set of eight wooden steps with a wooden post-to-post railing that matches the balustrade of both porch levels. The porches are supported at each story by a single square wood column located at the corner. The area beneath the porch is enclosed by wood lattice. The house's weatherboard-style siding is separated into rectangular areas by corner boards and a wide horizontal band of wood trim at the top and bottom of each story. The windows are a combination of aluminum casements and other window types. In the hipped roof, a large shed-roofed dormer extends to the south from the ridge of the roof to the house's common wall with the adjoining house at 233 West North Street. In the triangular side cheek of the dormer that faces North West Street is a circular window divided by muntins into six triangular lights.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Queen Anne, ca 1880**

November 2006: This two-bay frame house, formerly a corner grocery store, has a two-story bay facing Queen Street that projects slightly with a pyramidal roof set against a false mansard that is only on that elevation. The building is a Queen Anne variation on the district's typical Italianate style and Second Empire style frame town houses that, in this case, has been heavily remodeled over time. Although the building's architectural form is oriented to face Queen Street, it has an entrance on North West Street with a North West Street address. The North West Street elevation is seven bays long. The building's windows are double-hung 6/6 wood sashes which appear to be a little too small in nearly all locations, an indication that the building has been heavily remodeled. Near the center of the West North Street elevation is the building's only visible entrance door. The door has a transom over the door and is accessed by a five-step poured concrete stairway, or stoop, with metal pipe rail. The building resembles 1323 Queen Street, with which it shares a common wall, and it appears to be possible that the two have been combined into one residence, but they are treated here as separate resources.

November 2006: This two-story, two-bay Italianate style town house is apparently a new house that follows the traditional form of frame town houses in the Uptown/Parker-gray neighborhood. A very similar house stood at this site prior to 1958, and it is possible that this house is a remodeling of that house, retaining some of the key elements. According to the 1958 Sanborn map, the house that stood here at that time in had a front porch. The house has composition siding. The foundation appears to be poured-in-place concrete (or parged concrete block). The windows are 1/1 double-hung wood.

The roof is shed roof. The windows are paired, and in the second story, there is a projecting bay which has a tall, convex mansardic roof. At the top of the façade, in part supporting the mansardic turret roof, is a wood cornice with brackets and stylized dentils. The door is accessed by a three-step brick stoop which is screened-off from the street by a tall section of lattice nailed to a series of wood posts.

November 2006: This two-story, two-bay, Italianate style frame town house has a shed-roofed porch across the front with a standing seam metal roof and turned wood posts connected both by a turned spindle frieze at the top and a turned wood balustrade below. The windows are double-hung wood 1/1 sashes. In the first story is a tripartite window facing onto the porch, which has one-light sidelights, a transom, and small, square corner windows with "X" shaped muntins above the sidelights. The second story window opening contains a pair of windows in the bay above the tripartite window. Across the top of the façade is a wood cornice with brackets and stylized dentils.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Colonial Revival, ca 1960**

November 2006: This two-story, two bay brick house is constructed of varied-toned beige brick laid in American bond. The foundation is not visible. The windows are double-hung 1/1 wood sashes, with rowlock sills and concealed lintels. The windows are paired in the first story. There is apparently a shed roof, but the parapet at the top of the façade conceals it. The entrance is a bungalow-style door with four small, square lights of glass across the top and, below that, two vertical panels of wood. The door is accessed by a stoop-like section of raised concrete sidewalk with two steps coming up from the sidewalk at its western edge. The house is otherwise of a very plain design. The 1958 Sanborn map indicates a frame house with a front porch at this site at that time, and the 1992 Sanborn map indicates that the actual structural system of this house is concrete block.

November 2006: This two-story, two-bay, Italianate style frame town house has a one-story, two-bay, hip-roofed front porch with turned posts that are connected by a plain wood balustrade with square balusters. At the top of each porch post, there are two large, wagon-wheel-like Queen Anne style brackets, each one consisting of two concentric quarter-circles with lathe-turned radial spindles connecting the circular segments together. The house is clad in wood German siding. At the top of the façade is a wood cornice with brackets. A wall of concrete block construction is apparent in the south elevation, as seen where the common wall with 309 North West Street rises above the roofline of 309 North West Street (this wall was probably constructed when the older frame house that once existed at 309 North West Street was demolished, in order to stabilize the floor and structural systems of 311 North West Street). The foundation is not visible. The windows are 2/2 double-hung wood. The house has a shed roof.

November 2006: This two-story, four-bay frame house is attached to 1401 Princess Street, which is an older, formerly freestanding, American Foursquare. The house at 400 North West Street was designed to look like a two-story wing, but it has its own address and is a separate house. The house has a hipped roof, double-hung 1/1 wood windows, a small concrete-based porch at the entrance door that has a wood balustrade with square balusters and is accessed by a set of six concrete steps with a wood railing to each side matching the porch balustrade. To the side of the door is a sidelight, placed about 12 inches to the side, with siding in the space between the two. In place of a roof, the porch and doorway have been placed directly under a second story rectangular projecting bay which has only a small square window on its east face. The upper story of the house has a wall surface treatment that resembles stucco, while the lower story has wood weatherboard siding with narrow boards and prominent corner boards. The basement is raised, constructed of split-faced concrete block. The first story windows are paired.

November 2006: This Italianate style town house is one of six semi-detached houses in a row (three pairs of houses, 401-411 North West Street) that appear to have originally been built to match. Each of the six houses has a false mansard roof on a wood cornice with brackets and dentils crowning a two-story, three-bay house form. The two houses in each pair are mirror images of one another, with the entrance door of each house in the bay closest to the common wall. This house has been clad in PermaStone siding (a layer of concrete parged on metal lath with a decorative surface detailed to look like stone). The foundation is not visible. The windows are double-hung 1/1 vinyl. The false mansard has asphalt shingle roofing. The door, which has no transom, stoop, casing, or other ornamental details, has an aluminum storm door and is accessed by three modest steps. The front lawn is surrounded by a wrought iron fence and has a few shrubs and other plantings. This house is paired with 409 North West Street.

*Individual Resource Status: Single Dwelling Contributing Total: 1**Individual Resource Status: Shed Non-Contributing Total: 1***414 West Street North 100-0133-1252***Primary Resource Information: Single Dwelling, Stories 2.50, Style: Colonial Revival, ca 1930*

November 2006: This two-story, three-bay, side-gabled, freestanding brick house has a large hip-roofed porch that spans the front elevation. The house also includes cornice returns, soldier lintels, decorative shutters, and rowlock sills. The porch has square columns connected by a plain wood balustrade with square balusters. Accessing the porch is a set of three concrete steps with a metal pipe railing to each side. The windows are 6/6 double-hung wood with hinged shutters. The brick walls are laid in American bond. The roof has asphalt shingles, and there is an exterior end brick chimney. Other house features include cornice returns in the side elevations, and soldier course lintels and rowlock sills at the window openings. According to the 1941 Sanborn Fire Insurance map, the house was constructed prior to that time.

November 2006: This two-story, three-bay, Colonial Revival style multiple dwelling (apartment building) is entered from the side, and therefore has only windows facing toward North West Street. The brick walls are laid in American bond, and the foundation is not visible. The walls rise from grade in a single plane to form a stone-capped (or cast-concrete-capped) parapet that conceals the roof. The windows are 6/6 double-hung wood. Brick details include rowlock sills and a blond brick soldier course in line with the second story window opening lintels. The side entrance, which is barely visible from the street, has an architrave surround. The building sits back about eight feet from West North Street right-of-way, but has only minimal landscaping (a few small shrubs and one larger one as foundation plantings) in the front yard. The building was constructed at some point between 1941 and 1958, as indicated by the Sanborn maps of those years (the parcel was vacant in 1941). The 1958 map also indicates that the actual structural system is concrete block with brick facing.

*Individual Resource Status: Multiple dwelling Contributing Total: 1***419 West Street North 100-0133-1244***Primary Resource Information: Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1940*

November 2006: This two-story, two-bay, Colonial Revival style, freestanding, brick town house is a very simple cubic form, a typical example of freestanding brick houses built in the last years within the district's period of significance. Above a foundation of parged concrete, it has red brick walls laid in American bond. Each wall rises in a single plane from grade to the roofline where there is a shed roof with a simple band of wood trim at its slightly overhanging edges. The windows are double-hung 6/6 wood sashes with rowlock sills and concealed lintels. The first story window has a wooden flower box attached at the sill. The entrance door is sheltered by a one-story, one-bay gable-roofed porch with square posts and with weatherboards in its gable end. The porch has a brick floor with two brick steps leading down to grade with no railings. The design is otherwise strikingly plain. The house sits back from the street about eight feet, and the front yard is enclosed by a chain-link fence. The Sanborn Fire Insurance map for 1941 shows this house for the first time and indicates that the actual structural system is cinder block with a brick facing.

November 2006: This two-story, two-bay, semi-detached, Queen Anne style, brick row house features a corbelled cornice supporting a false mansard, a projecting bay with a slate-roofed pyramidal roof intersecting with the face of the slate-roofed false mansard, paired windows in the projecting bay, segmentally arched window openings with decorative brickwork in the arches, and stone sills. There is pressed metal cresting at the top of the pyramidal roof, and a pressed metal upper cornice marks the top edge of the false mansard. In the face of the pyramidal roof is a gabled dormer form, currently boarded-over with plywood, but apparently constructed as a dormer-like attic vent. The segmental arches have gauged brick with projecting headers and stone keystones. The windows are double-hung 1/1 wood sashes with rectangular tops set in the segmental arches. The entrance door has a place for a transom that has been closed-over with wood. The door is accessed by a three-step cast-iron stoop with post-to-post pipe railings to either side. The cast-iron posts have tall finial tops. This house is paired with 424 North West Street, which appears to have been constructed as its identical twin. A very similar pair was built at approximately the same time to the north, at 430-432 North West Street.

November 2006: This two-story, two-bay, freestanding, Queen Anne style, brick town house features a cornice with brackets supporting a false mansard which has a decorative pyramidal roof form intersecting it, a triple windows in the first story, and rock-faced stone lintels and lug sills. The pyramidal form is about twice as tall as the false mansard that it overlaps, and both roof areas are clad in pressed metal shingles. In the face of the pyramidal form is a triangular dormer form which is actually an attic vent with louvers. The false mansard is terminated at each end, like bookends, by a firewall extension of the house's side walls. The windows are double-hung 1/1 wood sashes. The entrance door, which is an inappropriate hollow core replacement, has a transom, and the door is accessed by a six-step cast-iron stoop with a post-to-post railing to each side. The cast iron posts have finial tops. This house is similar to the two pairs of twin houses just south of it in the same block, at 422-424 North West Street and at 430-432 422-424 North West Street. All were built at approximately the same time.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 1950**

November 2006: This two-story, two-bay Colonial Revival style brick row house is part of a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. Nearly all the houses that face the north-south streets in this area were built prior to 1941, but this house is the exception. Like the ones that face the east-west streets, it was added later in a slightly simpler rendition of the same basic form. The walls are brick laid in American bond, and they rise from grade to a parapet that conceals the roof. The window openings have concealed lintels and rowlock sills. The windows are paired one-light casements, although 1/1 sashes are found in the side elevation facing Oronoco Street. A recently constructed a one-story, two-bay, gable-roofed porch with square columns connected by a wood balustrade extends across most of the North West Street facade. The porch is accessed by a set of four wooden steps. There is wood lattice below the porch. The house was recently renovated by the addition of the porch and replacement of earlier windows.

The north-south rows have brick quoins at the corner units and a belt course across the entire row in line with the concealed lintels of the second story windows, consisting of soldier course brick with brick dentils above and protruding stretcher bricks at the top and bottom of the whole band. Above the belt course, there is either a panel of cast stone ornament centered in the face of the parapet directly above each window opening or a diaper of ornamental brickwork resembling a basket-weave pattern, sometimes extending across both windows. The parapet steps up slightly toward the middle of each row so that it is highest over the center unit. The windows and porches have been altered from house to house. This house has double-hung 1/1 vinyl windows with decorative shutters. Sheltering the doorway and the two concrete steps that access it, is a gable-roofed porch/canopy on metal rod posts.

November 2006: This two-story, two-bay Colonial Revival style brick row house is part of a garden apartment development that includes seven north-south rows built by 1941 along the east side of the 500 block of North West Street and both sides of the 500 block of North Payne Street. Similar houses were added later (by 1958) along the east-west streets in the same area, along Oronoco Street (1300 block), and Pendleton Street (1300 block). The total area comprises 51 matching or nearly matching, Colonial Revival style brick row houses. The seven pre-1941 rows contain five to seven addresses each, while the three later east-west rows are two to three houses in length. The brick walls are laid in American bond, and they rise from grade to a parapet that conceals the roof. The north-south rows have brick quoins at the corner units and a belt course across the entire row in line with the concealed lintels of the second story windows, consisting of soldier course brick with brick dentils above and protruding stretcher bricks at the top and bottom of the whole band. Above the belt course, there is either a panel of cast stone ornament centered in the face of the parapet directly above each window opening or a diaper of ornamental brickwork resembling a basket-weave pattern, sometimes extending across both windows. *Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Modern Movement, ca 1955**

November 2006: This two-story, two-bay brick row house has a flat roof concealed by a parapet with an aluminum cap. This house is located at the corner of North West Street and Pendleton Street, where it is part of a row of three houses that were built together (1325 Pendleton Street and 601 North West Street), at some point between 1941 and 1958, using one unified design so that the three appear to be one building. The house's window openings have concealed lintels, rowlock sills, and vinyl slider replacement windows. The entrance door is accessed by a five-step brick and concrete stoop with a wrought iron railing. The stoop and doorway are sheltered by a convex curved metal awning. The house's stylistic features are minimal, but they reflect both Modern Movement trends and the general design characteristics of mid-twentieth century Colonial Revival style brick row houses in the Uptown/Parker-Gray neighborhood. The houses on this side of Pendleton Street and on the adjoining parcels to the north facing North West Street are a continuation of the scale and appearance of the pre-1941 Colonial Revival style garden apartment houses in the 500 block of North West and North Payne Streets.

November 2006: This two-story, two-bay brick row house has a flat roof concealed by a parapet with an aluminum cap. This house is half of a pair of twins, the other half being 609 North West Street. The pair is located just north of a similar house at the corner of North West Street and Pendleton Street, which is part of a row of three houses, the other two facing Pendleton Street (1325 Pendleton Street and 601 North West Street). These houses appear to have been built together at some point between 1941 and 1958. The house's window openings have concealed lintels, rowlock sills, and vinyl slider replacement windows. The second story window is sheltered by a metal awning (there was also an awning over the first story window and door when the survey project began, but it was removed before the survey was completed). The entrance door is accessed by a five-step brick and concrete stoop with a wrought iron railing. The wrought iron work incorporates a Chinese railing motif. The house's stylistic features are minimal, but they reflect both Modern Movement trends and the general design characteristics of mid-twentieth century Colonial Revival style brick row houses in the Uptown/Parker-Gray neighborhood. The first few houses in this block of West North Street and others on this side of Pendleton Street are a continuation of the scale and appearance of the pre-1941 Colonial Revival style garden apartment houses in the 500 block of North West and North Payne Streets.

*Primary Resource Information:* **Multiple Dwelling, Stories 2.00, Style: Colonial Revival, ca 1940**

November 2006: This Colonial Revival style, detached, two-story, three-bay multiple dwelling resembles a modest-sized row house, but has two addresses and appears to have been built as two apartments with separate entrances. The brick walls are laid in American bond. The foundation is not visible. The windows are 6/6 double-hung wood with soldier-course brick lintels and rowlock sills. The roof is flat, concealed behind a parapet. Above each window opening, there is a pair of parallel horizontal line segments of protruding sailor-course brick, creating the effect from a distance of diapers (panels of decorative brick work). The north and south bays of the façade of the first story contain entrances. Each doorway has an architrave door surround with fluted pilasters. Each doorway is accessed by one or two brick or concrete steps. At the base of the façade is a soldier-course brick water table.

November 2006: This recently constructed, two-and-a-half story, three-bay, side-gabled brick row house is the southernmost address in a row of eight contiguous matching, or nearly marching houses, built as one project. All the houses in the row have raised basements constructed of split-faced concrete block and brick walls laid in stretcher bond in the upper stories. The houses step in and out of line and various details change from address to address to give each house its own identity and to emphasize the symmetry of the row as a whole. Most of the windows in the eight houses are double-hung 1/1 wood sashes. This house has a two-story projecting semi-hexagonal bay with a gable roof. An exterior chimney rises from the western half of the south gable end. The face of the projecting bay has paired windows. Most of the window openings have cast stone lug lintels and rowlock sills. There is a round window in gable end of the projecting bay and another above the entry. The front door has a transom and is accessed by a brick and concrete stoop consisting of series of concrete stairs surrounded by a wrought metal railing. There is a small front yard with a few small shrubs in it.

*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Colonial Revival, ca 2000**

November 2006: This recently constructed, two-story, three-bay, side-gabled brick row house is one of eight contiguous matching, or nearly marching houses in a row, built as one project. All the houses in the row have raised basements constructed of split-faced concrete block and brick walls laid in stretcher bond in the upper stories. The houses step in and out of line and various details change from address to address to give each house its own identity and to emphasize the symmetry of the row as a whole. Most of the windows in the eight houses are double-hung 1/1 wood sashes. This house has segmentally arched window and door openings in the first story. The first story window openings are actually pairs of narrow French doors with a single light of glass in each leaf. In front of each door is a section of wrought metal railing. A chimney rises from the eastern slope near the peak of the roof at the south wall of the house. The front door has a transom and is accessed by a brick and concrete stoop consisting of series of concrete stairs surrounded by a wrought metal railing. In the second story window bay above the entrance is a small round window. There is a small front yard with several small shrubs in it.

November 2006: This recently constructed, two-and-a-half story, three-bay, side-gabled brick row house is the northernmost address in a row of eight contiguous matching, or nearly marching houses, built as one project. All the houses in the row have raised basements constructed of split-faced concrete block and brick walls laid in stretcher bond in the upper stories. The houses step in and out of line and various details change from address to address to give each house its own identity and to emphasize the symmetry of the row as a whole. Most of the windows in the eight houses are double-hung 1/1 wood sashes. This house has a two-story projecting semi-hexagonal bay with a gable roof. An exterior chimney rises from the western half of the north gable end. The face of the projecting bay has paired windows. Most of the window openings have cast stone lug lintels and rowlock sills. There is a round window in gable end of the projecting bay and another above the entry. The front door has a transom and is accessed by a brick and concrete stoop consisting of series of concrete stairs surrounded by a wrought metal railing. There is a small front yard with less landscaping than the other houses in the row.

**711 West Street North 100-0133-1286**

*Primary Resource Information: Single Dwelling, Stories 1.00, Style: Colonial Revival, ca 1940*

November 2006: This one-story, side-gabled Colonial Revival style house has painted brick walls laid in American bond. The foundation is not visible. Across the façade is an enclosed, one-story, four-bay, shed-roofed porch. The porch is enclosed with an opaque material that resembles jalousie windows but appears to be movable aluminum louvers, and as such, the enclosure completely obscures the house's façade windows so that they are not visible. Windows in the side elevations have rowlock sills, but the sash material is not visible because they can only be seen from the public right-of-way on an oblique angle. The porch entrance, the only visible door, is an aluminum storm door. The roof has asphalt shingles, and there is an exterior end chimney centered in the north gable end.

*Primary Resource Information:* **Single Dwelling, Stories 1.00, Style: Other, ca 1960**

November 2006: This one-story, two-bay, ranch style, textured-brick house has an ell plan, wrapping around a two-bay shed-roofed porch that has been enclosed with aluminum siding. The gabled roof has asphalt shingles. The brick walls are laid in stretcher bond including a small raised basement area below the floor line, and in the gable ends which have triangular louvered ventilators at the peak. The windows are double-hung 8/8 vinyl replacement sashes with rowlock sills, concealed lintels, and false muntins. The house sits back from the street about fifteen feet on a parcel that has a small yard on all four sides, bounded on three sides by paved alleys. The house is surrounded by a scalloped, unpainted wood picket fence with metal-capped support posts about every five feet, located a few feet in from the edge of the lot. The portion of the fence that lies away from the view from Wythe Street is taller, solid, and serves as a privacy barrier. There is a variety of tall but otherwise medium-sized trees within and outside the fence. The 1992 Sanborn map indicates that the exposed brick is a veneer, rather than the house's actual structural system (which is not indicated).

November 2006: This Colonial Revival style, two-story, three-bay, public housing unit is an end unit in a row of six houses, part of a much larger complex of over 200 units designed to match. The walls are brick laid in American bond. The roof is a side gable with asphalt shingles. The windows are 4/4 double-hung vinyl, paired in each opening. The entrance door has an architrave surround crowned with a pediment. The second story has only two window openings, one of which is centered above the space between the entrance door and center window of the first story. At the entrance are two or three concrete steps with no railing, in place of a stoop. This row of houses was photographed from the alley that runs behind the backyard of each, so the photographs show only that side. The façades (south-facing elevations) are identical to those of the other row houses in the complex.

**1018 Wythe Street 100-0133-1305**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Other, ca 1880**

November 2006: This two-story, four-bay brick building appears to have been constructed as a pair of twin row houses, as evidenced by the fact that the center wall rises above the roofline. However, it has only one address and is counted as one resource in this survey. A recently constructed metal stairway attached to the west side elevation provides access to the second story and suggests that the two units may have been combined into one non-residential use requiring second story fire egress. The metal stairway to the second story is built of steel tubing that is square in profile, welded together. The stairway has a corrugated metal cover. The brick walls are laid in stretcher bond and have soldier brick lintels and rowlock sills. The windows are double-hung 1/1 wood sashes. The brick façade is capped by a plain wood cornice. The stretcher-bond façade, which continues to the side elevations, suggests a new veneer of brick over an older some remnant of an older building.

**1316 Wythe Street**      **100-0133-1312**  
*Primary Resource Information:* **Single Dwelling, Stories 2.00, Style: Italianate, ca 1995**

November 2006: This two-story, four-bay house is clad in stucco. It has elements of the Colonial Revival style and the Italianate style; it was apparently built between 1925 and 1940 as a modest Colonial Revival style brick house, but it has recently been stuccoed and redesigned in what was clearly an effort to make it an example of the Italianate style. The style or original appearance of the original house is no longer evident. The house has an ell-shaped floor plan, wrapping around a three-bay, one-story, shed-roofed porch that extends across the facade supported on chamfered square columns. The porch and the ell wing, both of which face Wythe Street, are recent additions. The columns are wrapped with a three-foot-high base molding and a similar eight-inch-tall molding at the top of each. The windows are 2/2 double-hung wood. The roof is an intersecting gable with asphalt shingles, a side gable form to which a two story, gabled, projection has been added projecting toward Wythe Street alongside the porch. There is a stove flue chimney. The building may have originally faced North West Street.

*Primary Resource Information:* **Single Dwelling, Stories 3.00, Style: Bungalow/Craftsman, ca 1920**

November 2006: This is a small, one-and-a-half story, frame bungalow with five bays of window and door openings across an enclosed front porch, around which a much larger, two-and-a-half story, five bay frame house has been constructed, ostensibly as an addition. The bungalow, the original portion of the house, has a hipped roof and a hipped dormer. The front porch has been enclosed with wood. The taller, ca.1990 portion of the house has a cross-gable roof and a projecting semi-hexagonal, two-story bay window below a pedimented gable end that faces south toward Wythe Street. The pedimented south-facing portion of the roof is a half story taller; thus, the house can be accurately described as a full three stories tall. The windows are double-hung wood sash units with a variety of muntin patterns, notably 4/1 in most of the Wythe Street façade openings. The addition is recessed about 25 feet from the street, leaving about half of the bungalow intact. The bungalow is representative of its style, even though the addition visually overshadows and overwhelms it.

=====

**STATEMENT OF SIGNIFICANCE**

The Uptown/Parker-Gray Historic District, located in the City of Alexandria, Virginia, covers over a forty-five block area of architecturally related historic resources and lies just northwest of the National Register-listed Alexandria Historic District. The district meets National Register Criterion A for both Social History and African American Ethnic Heritage, and Criterion C for Architecture. Contained in the district is a neighborhood known as Uptown, the largest of several Alexandria neighborhoods associated historically with the city's African American community. The Uptown/Parker-Gray Historic District is a good example of an urban historic district with a mixture of building types and architectural styles. It contains an important collection of churches, lodges, and other properties associated with the social life of the neighborhood and the ethnic heritage of the city as a whole. Most of the architecturally significant resources are townhouses and row buildings. The vernacular frame townhouses from the late nineteenth century represent historic styles of the era as they manifested themselves locally; they also reflect the racial segregation of the core area of the neighborhood and the related economic stratification, differing in size, materials, details, and design from houses of the same age a few blocks away in historically white neighborhoods. By contrast to these older houses, nearly all the twentieth-century residential buildings in the district are brick and most were constructed in rows of three to twelve units, often as part of development projects of 20 or more units. The district's twentieth-century residential buildings, whether individual or in rows, are nearly all in the Colonial Revival style, an apparent effort to emphasize Alexandria's early architectural heritage even when several whole blocks of new buildings were being built at once with little or no visual link to the oldest parts of the city. In addition to privately built row houses, there are over 200 units of public housing constructed in several different projects. The public housing, like most other houses built from circa 1900 to the end of the Period of Significance, consists almost exclusively of brick row buildings in the Colonial Revival style. The district is additionally significant under Criterion A in the area of Social History for its association with institutionalized segregation during the Period of Significance, most notably the establishment of segregated schools, libraries, and public housing by the City of Alexandria. The public housing, initiated at the beginning of World War II to create better homes for defense workers, had a negative impact on the fabric of an existing African American community; it displaced several blocks of private residences on the justification that they were old and inferior in design. Exclusively occupied by African Americans as a matter of legal policy until the 1960s, the housing projects reflect the Social History of the segregation era. The Period of Significance extends from circa 1810, the construction date of the earliest house in the district, to 1959,<sup>17</sup> to include the completion of the last phase of a public housing project built in phases in the 1940s and 1950s.

The resources listed as contributing in the district are all approximately fifty or more years of age, as determined in large part by comparing current data to the 1958 Sanborn Insurance Map for Alexandria. The public housing projects in the district that were initiated in the 1940s (for example, Ramsey Houses in 1942 and the two blocks of Samuel Madden Homes along Patrick and Henry Streets in 1945) led to the construction of the James Bland Homes project in four blocks at the northeast corner of the district in 1954. The design of the James Bland Homes project closely resembles the neighboring Samuel Madden Homes, in part because they were designed by the same architect, Joseph Saunders. Saunders designed one final block, filling in a gap between the Samuel Madden Homes and the James Bland Homes. This block, between North Alfred, North Patrick, Montgomery, and First Streets, was not completed until 1959. Therefore, this date was used as the end of the Period of Significance.

***Boundaries and Previously Listed Alexandria Historic District***

The district's boundaries meet those of previously listed areas to the south and east. The western boundary line includes architecturally related buildings up to the topographic barrier created when the railroad tracks at the district's western edge were raised, and it excludes new buildings in some of the outermost blocks. While all the resources from the period of significance are architecturally related, the boundaries include a few blocks of residences at the district's outer fringes that were not

=====

associated with the African American community and may not have been associated with the neighborhood name “Uptown.” The city created its own local ordinance district for the Parker-Gray area in 1984. Until that time, the name Parker-Gray had only been used for the two historic African American schools in the neighborhood, both of which had been demolished by the 1970s. The name Parker-Gray came to be the broader name for the district, as a result of the city’s 1984 designation, and the older name, Uptown, became less used and remains associated with a smaller area. The proposed Uptown/Parker-Gray Historic District is slightly larger than the city’s Parker-Gray Historic District, extending approximately one block further to the south, the north, and the northwest.

**HISTORIC CONTEXT**

***Activities and Forces that Shaped the Uptown Parker-Gray Neighborhood***

The Uptown/Parker-Gray Historic District reflects the latter stages in an urbanization process that began with the founding of Alexandria in the first half of the eighteenth century. The city as a whole, originally a tobacco port from 1730s, developed into a waterfront-oriented, 21-block street grid by 1749. The grid was extended by 1797-98 to cover an area ten times as large as the 1749 plat.<sup>18</sup> The nominated district occupies most of the northwest quadrant of the enlarged area. The majority of land in this quadrant was known historically by the City of Alexandria as Ward III. The most landlocked part of the enlarged grid, the northwest quadrant, developed more slowly than the other three quadrants. Large areas north of Cameron Street and west of Columbus Street remained only sparsely developed for three-quarters of a century.

***An African American Enclave by 1810***

Three or four small enclaves of houses developed within the nominated area by the mid-nineteenth century. One of these, around the intersection of Cameron and Patrick Streets, was home to a group of free African American families by 1810.<sup>19</sup> Although some of the enclaves like this one within what is now the Uptown/Parker-Gray area developed separate neighborhood identities for short periods of time, they eventually grew together into one larger neighborhood.

***Vacant Land and Military Uses***

Throughout the first six decades after the area in the Uptown/Parker-Gray Historic District had been platted, most of the land remained vacant. Three or four large houses were built for prominent Alexandria families within what is now the historic district area. Some of them had grounds covering more than one city block. A few small houses were also built within the plat in this time period, but generally on scattered sites with any one house barely within view of its neighbors. None of the large houses is still extant, and only a few of the small houses have survived, tucked into later rows that aggregated around them. Some blocks of land may have contained gardens or farm crops until the 1860s, and at least one was a grove of trees. The sparse development led to a powder house being built before 1791 near the southwest corner of the district<sup>20</sup> and another block within the district being used as a military parade ground beginning with the War of 1812. The powder house remained in place until 1818,<sup>21</sup> and the parade ground continued to be used until the Civil War. When Union troops occupied Alexandria during the Civil War, they developed numerous installations on what had, until that time, been open land. Some of these installations were completely temporary uses such as encampments.<sup>22</sup> Others included a large military-run bakery that was believed to be the largest in the world at the time.<sup>23</sup> The bakery complex occupied an entire city block. Most of the military uses disappeared at the end of the war, and all the parcels had found other uses by 1900.

***Railroad Lines, Manufacturing, and Early Rows of Rental Houses***

By the 1860s, two mainline railroads and numerous railroad spurs occupied two or three of the neighborhood’s most central north-south streets. The railroad lines connected the city to other parts of Virginia and to Maryland during and after the Civil War. Their location made the neighborhood attractive for manufacturing; however, the largest manufacturing operations were

=====

built just outside the district boundaries. By 1900, as the district came to be surrounded by large employers, the residential blocks of the Uptown/Parker-Gray neighborhood, particularly east of Henry Street and south of Oronoco Street, became attractive to developers who built rental housing.<sup>24</sup> Numerous individual houses were built in the neighborhood at the same time, many of them for private home owners. The places of employment and other means through which various families were able to rent or construct houses may not be documented well enough to draw firm conclusions. However, it appears that a number of African American families found the means to construct modest homes in the district in this period. Also, by contrast to the limited means of the majority of the city's African American community, at least a few of the city's African American citizens were amassing wealth by the late nineteenth century through successful business ventures. The growth of the African American community and other smaller ethnic communities was not the only force shaping the district in this period.

***Development Forces from Outside the Boundary***

Throughout the nineteenth and early twentieth centuries, development in the Uptown/Parker-Gray area appears to have been generated, at least indirectly, by activities that occurred just outside the boundaries of the nominated area. Between 1800 and about 1890, Alexandria's business district along King Street (a block south of the nominated area, in the Alexandria Historic District) grew to encompass over 14 blocks of contiguous storefront buildings. The city's main north-south corridor, Washington Street (one block east of the district), also became heavily developed with businesses, residences, and a variety of important institutions, such as churches and schools. As King Street and Washington Street became more intensely developed, houses also began to crop up a block or two north of King Street and west of Washington Street within the boundary of the nominated district. Just beyond the northeast corner of the nominated area, the Alexandria Canal was built in the 1840s,<sup>25</sup> from Alexandria to Georgetown. At the time, Georgetown was the more successful of the two river ports, and it had been chosen to be the southern terminus of the Chesapeake and Ohio (C&O) Canal. This decision forced Alexandria interests to build a separate canal connecting the city to Georgetown. The canal not only connected the two towns but also connected Alexandria to the longer (C&O) canal by which coal was shipped from Western Maryland. Additionally, it made it easier to ship Alexandria goods to markets in the upper Potomac watershed. In time, the canal came to be identified with at least two new neighborhoods at the edge of the city. The older of the two neighborhoods, located just outside the nominated boundary, was called Cross Canal.<sup>26</sup> It apparently came into being shortly after the Civil War. At a later date, a second neighborhood called "The Hump"<sup>27</sup> developed within the nominated boundary as an extension of Cross Canal (The Hump comprised most of the area that was later demolished to build the James Bland Public Housing projects). Another center of activity at the edge of the district, the Alexandria County Courthouse, was also located, throughout most of the nineteenth century, just outside the nominated boundary on N. Columbus between Queen and Princess Streets.<sup>28</sup> Activities at the courthouse may have created a need for buildings on adjoining blocks in the southeast corner of the district.

***The City's Largest Employers were Just outside the District Boundary***

In the last quarter of the nineteenth century, Alexandria's largest employers were concentrated just outside the corners of the nominated area. As manufacturing increased at factories located a block or two beyond the district boundary, the number of houses and neighborhood-related facilities in the eastern and southern blocks of the nominated district increased as well. Two blocks east of the district boundary, Portner's Brewery grew incrementally from a small business to a large facility with a large work force between the 1860s and 1890s.<sup>29</sup> Founded in 1862 in response to the Union Army's occupation of the city, the brewery business grew rapidly during the war because of the demand for beer among the soldiers. After the war, however, Portner's continued to grow, becoming one of Alexandria's most important manufacturing concerns. By about 1880, the brewery complex covered an entire city block and was still growing. Even before the brewery began to generate activity at the neighborhood's edge, some of the Uptown/Parker-Gray area's residents may have been textile mill workers. A large textile mill was built one block south of the brewery site (two or three blocks east of the district's southeast corner) in the 1840s. It primarily operated before the Civil War and, although it sat idle for decades in the latter part of the nineteenth century, it may have employed Uptown residents in years when it was functioning. It is not known for certain that the employees of either the

Section 8 Page 281

=====

textile mill or the brewery lived or built buildings within the district, but the presence of the city's largest employers, so close to the district's edge, appears to have been a factor in the district's growth.

***The Union Army Occupation and Food Processing Plants***

Several facilities for developing and processing food were built in Alexandria when the Union Army occupied the city during the Civil War. The army's need for provisions led the United States government to locate slaughterhouses and similar processing plants in the city. Military activities also created a new market for the fishing and fish-packing operations that had already developed at the Alexandria waterfront. The only large building built to process food for the military at a location within the Uptown/Parker-Gray Historic District boundaries was the bakery at Princess and Fayette Streets, along what were then railroad tracks. Known as the Government Bakehouse, it was said to be the largest of its type in the world at the time.<sup>30</sup> It consumed 400-500 barrels of flour a day and had 200 employees producing 90,000 loaves of bread a day. (Nothing remains today of this factory complex, the land having been occupied by a couple of generations of other buildings since the demise of the bakery.)

***Three Glass Factories built to meet the Demand for Bottles***

After the Civil War, as businesses like Portner's Brewery continued to develop, the city benefited from a growing demand for bottles. Three glass factories were built in Alexandria between 1890 and World War I.<sup>31</sup> The factories were located just beyond the northeast, northwest, and southwest corners of the nominated district. All three plants suffered devastating fires by the end of World War I.<sup>32</sup> Two of the companies consolidated as a result of one of the fires, but all three had closed by 1918. Alexandria's main planing mill and lumber company, Smoot Lumber, also suffered a fire in 1909, at its waterfront plant. It relocated by 1912 to a site just outside the northeast corner of the boundary of the nominated district.<sup>33</sup> At the end of World War I, Alexandria became home to a torpedo-manufacturing plant and, within a few more years, had a large Ford Motor Company plant. Although these operations were further from the Uptown/Parker-Gray Historic District, they became the city's main industries for a period, employing the area's blue collar workforce and sustaining the city in general in the same decades that many new houses were being constructed in Uptown/Parker-Gray and several other neighborhoods at the corners of the city.

***Regional Dairy Farming and its Impact on the District***

In the first half of the twentieth century, the rural parts of Northern Virginia became the most productive dairy farming region in the state.<sup>34</sup> In this period, a number of dairy processing and distribution plants made Alexandria their home. One or two modest-sized dairy processing plants were located within the bounds of the Uptown/Parker-Gray area. An example was the Comico Products Corporation's "Milk Products" facility, which was located in 1941 in a building still standing at the southwest corner of Henry and Madison Streets (1008 Madison Street).<sup>35</sup> The dairy industry represented a second market for bottles manufactured by Alexandria's glass factories and also used other materials manufactured in the city. In the same era, the Uptown/Parker-Gray neighborhood contained at least one large hay and feed warehouse serving farmers who came to town for supplies (the circa 1918 building of the Hooge Grain and Feed Company at 500 N. Henry Street has recently been torn down for a new development).<sup>36</sup> In the first quarter of the twentieth century, the neighborhood had a number of other businesses closely connected to agriculture, including a vinegar-processing plant, several horse-related businesses (including livery stables), and at least one meat-packing plant (Armour and Company Wholesale Meats, located at 1019 Cameron Street, a contributing building in the district).<sup>37</sup>

***Row Houses and Growth of Nearby Factories***

The waves of residential growth that coincided with the industrial and residential developments of the latter decades of the nineteenth century produced the distinctive mixture of buildings in the architectural fabric that characterizes about half of the Uptown/Parker-Gray Historic District. The earliest growth is represented by the oldest residences at the eastern and southern edges of the district, while the houses that coincide with the era of food production and glass manufacturing in the last quarter of the nineteenth century are found in the numerous blocks of the neighborhood dominated by small frame row houses. The much

**Section 8 Page 282**

=====

larger waves of growth that came in the twentieth century are reflected in large residential development projects that appeared in the neighborhood in the 1940s and 1950s.

**Architectural Significance**

The Uptown/Parker-Gray Historic District is significant in the area of architecture in two ways: for its nineteenth-century townhouses and row houses, most of which are simple in design but are also good examples of architectural styles that were popular in Alexandria at the time, and for its twentieth-century Colonial Revival-style houses, including some large row house developments that sometimes consist of two or three blocks of matching units. It also has a few individual buildings of architectural significance, such as churches and other institutional buildings that serve as focal points in the urban fabric of the neighborhood; however, these properties derive their primary significance from the fact that they served as centers of community and ethnic cultural activity during the segregation era.

***Architectural Differences from the Remainder of Old Town***

The architectural characteristics of the district's nineteenth-century buildings distinguish it from the neighboring parts of Old Town Alexandria. The majority of the nineteenth-century buildings in the nominated area are frame and simpler in design than those found just across the district boundary in the Alexandria Historic District. The contrast in construction materials reflects the more limited means of people who built houses north of Cameron Street and west of Columbus Street before 1900. Differing in ways that are sometimes subtle in character, style, and to some degree integrity from the majority of Old Town's historic buildings, the buildings were excluded from the previously listed Alexandria Historic District where the historic resources are predominantly older, higher-style buildings almost uniformly constructed of brick. In fact, the Alexandria Historic District boundary steps to the northwest along Columbus, Alfred, Cameron, and Queen Streets (the blocks closest to the intersection of King and Washington Streets) to include a few blocks north of Cameron Street and west of Columbus Street where the buildings are of a more formal style and are constructed of brick. Though simpler in design from those in the neighboring blocks of the Alexandria Historic District, the Uptown/Parker-Gray Historic District's late-nineteenth-century buildings are architecturally significant for the way in which they illustrate the distinct and separate status of the neighborhood, a poignant reminder of the socio-economic contrasts of the segregation era.

The majority of the nineteenth-century houses in the Uptown/Parker-Gray Historic District are architecturally significant for their modest use of architectural styles with townhouse forms, usually boxlike frame buildings with nearly flat shed roofs and scaled-down ornamental features following the building trends of the era. Some of the oldest houses (a small percentage of the district's resources) conform more to pre-Civil War Greek Revival-style models or even earlier styles, with side-gable roofs and ell-shaped floor plans. A few other early buildings have gables hidden behind parapets. Most of the pre-Civil War brick buildings in the district are found in the 100, 200, and 300 blocks of Patrick Street, or within a block or two of these streets on the cross streets.

In the oldest sections of the neighborhood, the houses appear to have been built individually, becoming aggregated over time into contiguous rows as other houses were built next to them. The slowly built rows along Cameron, Columbus, and Patrick Streets are the result of the gradual development of residential areas in the eastern and southern blocks of the district in response to activities along King Street and Washington Street. In the blocks where the houses were built one at a time, there is always some variation in design from house to house. Early examples of aggregated rows near the intersection of Cameron and Patrick Streets (near the part of the neighborhood documented to have been an enclave of free African Americans as early as 1810) include some side-gabled brick buildings. These are among the few examples in the nominated area that are brick and have massing and window details that are more typical of Greek Revival-style houses or Federal-era houses than of later nineteenth-century styles. A few pre-Civil War houses in the district have radial-brick jack arches at the window and door openings and a few have

=====

Flemish-bond façades.<sup>38</sup> An example is the two-bay circa 1830 brick house at 534 Columbus, which is most likely the oldest extant house north of Cameron Street in the district. Most of the houses with these details are found in the parts of the district closest to King Street.

***The Neighborhood's Oldest Developer-Built Row Houses***

A block or two from the oldest houses are some rows of buildings with repeated designs built between the 1870s and 1920s. These were constructed as block-long repetitions, an indication that the whole row was built by a single developer. They are thought to have been built either as rental properties or as speculative developments where the houses would be sold individually. The row built by Joseph Laphen at 722-726 Columbus Street is an example, as is the circa 1900 Queen Anne-style row next to it.<sup>39</sup> The Queen Anne-style row (at 700-720 Columbus Street) has two-story bay windows that are square in plan, while the circa 1900 Queen Anne-style row at 513-531 Alfred Street has the more typical semi-hexagonal type of two-story bay windows. Historic maps indicate that two or three of the rows were the first developments in their respective blocks and were built at a time when they were surrounded by open fields. The row that Joseph Laphen built was an example of this (as seen in the 1877 Hopkins map of the city) until more houses were built next to it around 1900.

***Modest Versions of Late-Nineteenth-Century Styles***

In contrast to the earlier, predominantly Greek Revival-style houses, the frame houses represent styles from shortly after the Civil War, from the Italianate and Second Empire styles to the Stick style and Queen Anne style, often with two or more styles blended. Many have either a false mansard or an ornamental cornice at the top of the façade. The cornices and false mansards are found in combination with ornamental window hoods and other characteristics of styles from the 1870s through the 1890s. In general, however, they were built with only modest ornamentation, a reflection of the modest means of most people in the neighborhood. For instance, there are almost no segmental window openings, heavy drip mouldings, or oversized keystone details in the district, typical characteristics of Italianate-style houses that were popular even with frame houses when the Italianate style was in vogue. Instead, simpler window mouldings around square openings are common in the district, and the district's cornices and doorways often sport incised brackets, dentils, and other details. Transom lights are also commonly found over main entrances in the district, and some ornamental doorways have sidelights, decorative panels, lathe-turned elements, and other examples of decorative woodwork from the era packed into tidy architectural entrance ensembles. Some of the houses have elements of older styles, such as side gable roofs. In a number of cases, the side-gabled forms appear to have been built at an earlier date and then updated with new ornamental features such as incised brackets as styles changed. In several cases, these older style elements may have been present as a result of residents being more familiar with details that were passing out of fashion or chosen for practical reasons, since gable roofs may have been easier to construct under certain circumstances than flat roofs would have been. In general, the houses are significant in the area of architecture, as examples of mid-nineteenth-century and late-nineteenth-century styles that were popular and characteristic of their era in Alexandria, and as the simplest form these styles took in this area.

***Twentieth-Century Houses are Consistent in Quality, Mostly Colonial Revival in Style***

Most of the twentieth-century houses in the neighborhood, on the other hand, are brick and are detailed in the Colonial Revival style. They are significant as a large and stylistically consistent collection of interpretations on this important revival style. The neighborhood contains a wide spectrum of interpretations of Colonial-era architecture, from earlier examples where row house projects incorporated Craftsman-style details into otherwise Colonial Revival designs or where innovative new materials were introduced such as rock-faced concrete block, to later examples where the Colonial Revival-style details are subtle and part of a Spartan and crisp appearance consistent with the Modern Movement. Some of the larger Colonial Revival-style developments were built in rows of six to twelve contiguous units, where the houses were distinguished from one another by varying the door surrounds, parapets, porches, or other details. In a concentration of examples found in the southwestern part of the district, cast-

City of Alexandria, Virginia**

**Section 8 Page 284**

=====

stone components were incorporated, including ornamental balcony-like window boxes and elaborate door architraves, as well as more typical decorative lintels and parapet ornaments. Most of the parapets also have panels of diapered brick. In several parts of the district, cast-stone architraves were used at doorways incorporating designs derived from Classical sources but with bas relief detailing and unusual proportions that show the influence of the Art Nouveau and Art Deco movements. (Some examples of the door surrounds with bas relief detailing are found in the 1600 block of Princess Street and in almost all the row house units facing Earl and Suter Streets, apparently all part of the same development.) The cast-stone architraves were apparently manufactured in several variations, and the differing forms were used in alternating sequences to distinguish one house from another. The architrave designs may have been manufactured locally and used by more than one developer. They are found on scattered sites outside the district and in adjoining sections of other Alexandria neighborhoods where freestanding homes on larger lots were constructed at about the same time as well as row house projects. The similar row house projects include contemporaneous rows in the nearby neighborhoods of Rosemont and Del Ray.

***Freestanding Colonial Revival Houses***

Some of the Colonial Revival buildings were designed and built individually as freestanding residences or commercial buildings. Among the residential examples, however, there are only a few cases where a given design appears only once. In most cases, the houses follow patterns that are repeated on single-parcel sites around the neighborhood. Cape Cod-type houses with repeated designs are found in the 400 block of N. Peyton Street. Very modest references to the Colonial Revival style are evident in a few concrete block examples found in the 400 block of N. Fayette Street. In nearly all individually built twentieth-century houses, though, the effort to revive the appearance and feeling of the Colonial era is apparent, and the absence of other styles that were popular across the country at the time suggests an interest on the part of the builder to build something consistent with Alexandria's real Colonial-era homes found a few blocks to the east and south of the district.

***Developments Reflected Influence of Garden Apartments and Garden City Movements***

Part of the significance of the collection of Colonial Revival-style developments in the nominated area derives from its relationship to architectural movements of the time that stressed the role of garden space in the siting of row houses. Some of the development projects in the district show the influence of the British garden apartment and garden city movements of the same era. With the exception of the public housing units, the row building projects in the Uptown Parker-Gray Historic District were not designed with the entrance facades of units facing into large, shared, rectangular garden spaces. However, some of the rows were set back from the street far enough that each unit has a square garden of its own in front, sometimes delineated as a private space for that unit with ornamental fences and occasionally brick corner posts. An example is found at 404-432 Henry Street. Although some fence enclosures are of a more recent date, the ones that were intended to define a designed garden space from the beginning are indicated by identical ornamental features such as regularly spaced brick piers that continue for the length of the matching row of houses; sometimes, some elements of the original fences still connect the piers. Garden apartment complexes and townhouses built in the garden apartment model appeared in a variety of locations in and around the City of Alexandria in the first half of the twentieth century. These developments include notable large-scale examples like Fairlington [NR 1999], built 1942-1947, and the adjoining 1941-1943 Parkfairfax development [NR 1999], both located at Alexandria's edge but about a mile north of Old Town, as well as Gunston Hall Apartments in the southwest quadrant of Old Town.<sup>40</sup> The city also has several other large garden apartment developments that are considered stand-alone neighborhoods and a number of smaller developments on scattered sites in various parts of the city. The majority of garden apartment complexes in Alexandria are constructed of brick and detailed in the Colonial Revival style. The row house developments in the Uptown/Parker-Gray area, however, are notable as a large collection of Colonial Revival-style brick row houses that help to complete the fabric of an older neighborhood rather than focusing inward and emphasizing their separateness from the areas around them.

***Porches Became More Common in the District with Colonial Revival Style***

Some elements came late to the Uptown/Parker-Gray Historic District's collection of architectural styles. Just as front yard set-

**United States Department of the Interior

**Section 8 Page 285**

=====

backs were not found in Uptown/Parker-Gray until twentieth-century styles arrived in the neighborhood, the same delay is seen in other design trends such as porches and other entry features. Beyond a few remarkably simple examples of small-scale stoops, porches appear to have been quite rare in the Uptown/Parker-Gray Historic District before the 1890s. Most of the frame houses do not have excavated basements. The houses were built with the wooden elements unusually close to the ground, so that siding and structural framing are separated from the soil line only by a barely visible band of foundation wall, in brick or occasionally stone, often as little as a single course of brick. Porches became more common by the beginning of the twentieth century when builders began building houses with basements. Lack of space was another reason that many of the rows of nineteenth-century houses were built with no setback, so that there was no room for a porch. In the district, houses from this era often have small stoops of just a step or two built over the sidewalk. This pattern changed with the introduction of front garden spaces in the neighborhood beginning about 1910. In the rows of houses built in the 1910s and 1920s, each unit usually has a Classical Revival-style porch with simple Tuscan columns. Later Colonial Revival-style houses used wrought metal railings and metal posts in place of the more traditional wood porch designs. By the 1950s, metal awnings became a common substitute in the district for traditional wood-frame porch roofs.

***Apparent Effort to Build in Colonial Revival because Alexandria is a Colonial-Era City***

The brick residences and row houses that were constructed after 1920, largely on the west side of the Uptown/Parker-Gray Historic District, reflect a conscious effort to mimic the Colonial-era architecture of the older parts of the city. While the parts of the neighborhood along the eastern and southern streets tend to be dominated by frame row houses from the nineteenth century, the larger Colonial Revival-style development projects in the western fringe of the district provide some of the qualities of the pre-Civil War blocks in Alexandria's older neighborhoods well beyond the district boundary to the east. However, at the same time that their almost universal use of brick walls produces a consistency in color and texture, the units are also repetitious, barely distinguished from one another by Colonial Revival-style decorative elements that usually appear in alternating patterns where some details are repeated on every other house. The repetition and uniformity in these areas, and the use of some more modern details such as flat roofs concealed by stylized parapets, create a different feeling in the Uptown/Parker-Gray Historic District's brick row houses from what one finds in the much older parts of Alexandria.

***Alexandria Village***

A large percentage of the units at the western end of Cameron Street, along Buchanan Street, were built as a single development project called "Alexandria Village."<sup>41</sup> The development was built in 1940-1941 by the Economy Housing Corporation. The newly built units were available only to whites, a typical restriction in privately built housing developments throughout the city in the era. The same design was used for portions of the development sited on the opposite side of the railroad tracks, areas that are now clearly separated from the district by the raised railroad tracks. When the Alexandria Village development was constructed, the tracks passed through it but did not separate the development into two neighborhoods, as is the case today. When the tracks were raised, the project involved demolishing all the houses along the west side of Buchanan Street, which had been built to match those still extant forming the edge of the district on the east side of the street.<sup>42</sup>

***Public Housing as Last Major Expression of Colonial Revival Style in the District***

The evolution of Colonial Revival designs in the district culminates with Joseph Saunders's designs for public housing at the north end of the district, as built between circa 1945 and 1959.<sup>43</sup> The housing was developed in several phases. The oldest phase, in the 900 blocks Patrick and Henry Streets and the 1000 block of Montgomery Street, was actually built as part of the Samuel Madden Homes project. The majority of Samuel Madden Homes was a complex located several blocks east of the Uptown/Parker-Gray Historic District boundary, close to the Potomac River. Although a government initiative mainly to build houses on a multi-block site east of the district, the project was justified as blight-clearance. The "blighted" area cleared as part of Samuel Madden Homes, beginning about 1942, extended well beyond the site of the new public housing units. It included most of the land north of Madison Street within the boundary of the nominated district, generally the same area that had been the

**Section 8 Page 286**

=====

neighborhood known as The Hump. After it was cleared, some of the land became the location of temporary houses built to provide displaced families a place to live while the Samuel Madden Homes were under construction. Beginning in 1954, the three-block area from Wythe Street to First Street, between Alfred and Columbus Streets, and the adjoining blocks, between Madison, Montgomery, Alfred, and Patrick Streets, became the site of the first phase of James Bland Homes. In 1959, the block bounded by Montgomery, First, Patrick, and Alfred Streets became the final phase of construction for the James Bland Homes project. Between the five blocks covered by the James Bland Homes project and the two adjoining blocks containing the Uptown/Parker-Gray portion of the Samuel Madden Homes, there was little variation in the design of the units. The design was adjusted to meet angled streets in both the earliest and the last phases of construction. Where the street pattern allowed for longer buildings, some were constructed on an apartment building model, with flats on each of two stories, as opposed to the townhouse design used for the majority of the units. The middle phases of the projects had the least variations in both the dimensions of the block-sized sites and in the units and garden spaces developed on the sites. However, one variable in the 1954 phase of the project is that the portion of the site along Columbus Street stepped around pre-existing houses, so that the public houses only occupy half of each block on that side of the site.

Saunders used the same basic design for all the public housing units north of Oronoco Street (Samuel Madden Homes and James Bland Homes) in the nominated area. The design combines sterile aspects of function-based modern architecture with the aesthetics of garden apartment siting, all with a modest sprinkling of Colonial Revival-style details. In the longer rows within the public housing area, the repeated townhouse forms create undifferentiated street walls that are as many as eight units long per block on the east-west streets. The longest rows appear across from one another for two or three blocks in a row along the same street. These characteristics of the design, combined with an almost complete absence of decorative details in the same elevations, give it the alienating architectural feeling often associated with public housing projects that were designed as part of the Modern Movement. This aspect of the design is especially apparent to people driving through the neighborhood. However, the housing projects have a totally different appearance to pedestrians, especially those using the north-south streets. About 60 percent of the houses were placed in "C-shaped" arrangements to form rectangular shared gardens; the garden areas have been carefully landscaped with trees and shrubbery. Although the units to the right and left of each garden space have a uniform design in brick, the use of a few Colonial Revival-style details, such as decorative wood lintels at the doorways, gives the houses that face into the garden areas a traditional appearance and human scale. At the far side of each garden space in four blocks out of the seven-block area (the side opposite the north-south street), the houses are arranged in sets of four with wood siding in a center second-story section. The wood-sided section has an inset first-story porch beneath it, shared by the two center units. Even these details lose some of their effectiveness when repeated as they are in five or six different garden spaces in a complex that occupies eight city blocks. However, the trees and other landscaping vary slightly from block to block, adding a little more variety to the design.

***Other Public Housing in Uptown/Parker-Gray Area***

The public housing units in the Uptown/Parker-Gray area include at least three other projects, two of which are within the bounds of the nominated area. The earliest public housing in the area is actually the Ramsey Houses, a set of four American Foursquare house forms built in 1942, containing multiple units (three contain four units and one has three units).<sup>44</sup> The houses, which are located on the east side of Patrick Street between Pendleton and Wythe Streets, are constructed with a stucco exterior finish and low hipped roofs. Contributing resources, the Ramsey Houses present an attractive appearance and represent stylistic trends of the 1930s and 1940s, modestly detailed but reflecting the Craftsman- and Prairie-style characteristics that often appear in the American Foursquare type of house. The other public housing projects in the Uptown/Parker-Gray area are more recent. Jefferson Village, a Late Modern or Post-Modern-style complex at West Street and Princess Street, was built in 1988.<sup>45</sup> The units of this complex are non-contributing resources. The Andrew Adkins housing project, located north of Wythe Street and west of Fayette Street, was built in 1968.<sup>46</sup> It has been excluded from the boundary of the district (although the boundary touches this complex on three sides).

=====

**Significance in the Area of African American Ethnic Heritage**

While the district contained at least one small enclave of free African American families listed in documents like the United States Census by the early 1800s, a somewhat larger area within the Uptown/Parker-Gray neighborhood grew into a major center of African American ethnic heritage after 1870. It can be described as the largest and last in a series of historically African American neighborhoods to develop in the city.<sup>47</sup>

The older enclaves that had existed within the current Uptown/Parker-Gray neighborhood before the Civil War apparently anchored the growing number of African American families that made their homes in the district after the war. By 1900, the African American community within the district comprised at least a fourth of the area within the nominated boundaries. After the city built the Parker-Gray Elementary School (1920) and later Parker-Gray High School (1950), two other small African American neighborhoods located partly within the boundaries — Colored Rosemont and The Hump — began to grow together with Uptown into one larger neighborhood around the schools. The neighborhood was of increasing importance to the city’s African American community after 1900 and through the 1960s. The single largest African American residential section of the city in the era of segregation, it also became home to many of the city’s African American-owned businesses and institutions. It was also home to several businesses owned by non-African Americans that served a predominantly African American clientele (the history of African American businesses is discussed in more detail as part of the discussion of significance in the area of social history and segregation, in the discussion that follows). While half of the city’s African American churches remained outside of the Parker-Gray/Uptown neighborhood at their historic locations in older neighborhoods, most of the lodges and recreational facilities serving Alexandria’s African American community, as well as many of the city’s segregated public facilities designated for African American citizens, were located within the nominated district.

Alexandria was a focal point of regionally and nationally important chapters in African American history throughout the nineteenth century. Some of these occurred just outside the boundaries of the nominated district but still appear to have shaped the ethnic community within the Uptown/Parker-Gray neighborhood. For instance, the city was a major center of the antebellum slave trade with two or three slave-dealing establishments located just a block south of the district boundary prior to the Civil War. Mt. Jezreel Baptist Church (within the district, at 317 North Payne Street) traces its history to a split that occurred at Shiloh Baptist Church, two blocks south of the district (at 1401 Duke Street). Shiloh Baptist Church traces its history to a group of 50 African Americans, former slaves and possibly some soldiers, who organized as a congregation at L’Ouverture Hospital, a military hospital for African American soldiers, in operation during the war at what had been Price and Birch’s slave prison. During the war, runaway slaves (known at the time as “contraband”) were held at this location by the Union Army as a control measure until the end of slavery.<sup>48</sup>

Segregated schools developed both near and within the district boundary in the nineteenth and early twentieth centuries. Segregation of the city’s libraries occurred initially as the result of an event at what was then the city’s only library, just east of the district boundary, and the issue was addressed by construction of a new segregated library for African Americans at the heart of the Uptown/Parker-Gray Historic District. The events that occurred within the Uptown/Parker-Gray Historic District relating to slavery and the development of free African American communities, segregated education, and segregated libraries, were not only of local significance. Alexandria’s various approaches to racial segregation and equality were important regionally as well as to Virginia and to the nation.

Alexandria was also home to one of Northern Virginia’s most important communities of free African Americans at various times before the Civil War, with a portion of the community located in the Uptown/Parker-Gray area at least a half century before the war. Because the city was considered part of both Virginia and the District of Columbia for the first half of the nineteenth century, free African Americans from other parts of Virginia migrated to Alexandria to escape laws that made it difficult for them to remain in the commonwealth. Along with the former slaves who had been freed or had purchased their own freedom

=====

came recently escaped slaves, or “contrabands.” The city also had some white citizens, including an active Quaker congregation, who assisted the African American community.<sup>49</sup> In this era, the small community that developed at the intersection of Cameron and Patrick Streets was one of the centers of Alexandria’s community of free citizens of African descent.<sup>50</sup> In time, the area around this enclave would come to be known as Uptown, perhaps because it was uphill from the older parts of Alexandria that had developed along the Potomac waterfront, and it was the part of Old Town at the furthest distance from both the Potomac River and Hunting Creek.<sup>51</sup>

***Alexandria and the Slave Trade***

The city’s role in the slave trade grew as a result of the collapse of the local tobacco industry by the eighteenth century. Surrounded by vast tobacco plantations, the Alexandria area witnessed decreasing tobacco production as the overworked soil became less and less fertile. Many large farms had gone out of production by the decades prior to the Civil War. Larger land holdings were subdivided and sold to farmers, often northerners, who converted them to other kinds of agriculture, such as mixed grains. The newer types of farming occurred in more confined areas, where farm owners and their families could generally tend to their own fields. Acre for acre, the newer crops did not require as much manual labor as the expansive tobacco plantations had required. The consequent movement of new farm families from northern states led to a society where public opinion was divided by the time the Civil War began on issues relating to slavery, abolition, racial equality, and related issues, often running counter to those of the rest of the commonwealth. The production of wheat and other grains in the decades before the war also brought millers and others involved in processing and trading in grains into the area in the late-eighteenth- and early-nineteenth-centuries.<sup>52</sup> After experiencing a recession in the post-tobacco era, the city saw an economic revival around wheat production by the 1820s.<sup>53</sup> The result of these changes for the African American community was that large numbers of enslaved individuals were no longer needed in local agriculture. Rather than freeing them, many local plantation owners began either selling them to slave traders who sold them to other individuals in the deep South, where cotton farming was on the rise, or hiring them out to in-town employers. Being sent south usually meant, for the enslaved individual, being permanently separated from other family members.

The known buildings from which slave dealers operated are all just outside the boundary of the Uptown/Parker-Gray Historic District, in commercial areas to the south and southwest of the nominated district along Duke Street.<sup>54</sup> On the other hand, the city’s influential Quaker community was centered a few blocks southeast of the district with a meeting house at St. Asaph and Wolfe Streets from 1802 to 1882.<sup>55</sup> Some of the Quakers made real estate available to the African Americans when other sectors of the community would not sell to them. Similar benevolence was extended by members of one or two other religious groups, such as the Baptists.

***African Americans in Alexandria in the Mid-Nineteenth Century***

Although Alexandria had a well-established reputation as a slave-trading center by the mid-nineteenth century, it also had an important community of free African Americans. As the enslaved individuals were in less demand on local tobacco farms, owners who did not sell them through the slave markets began sending some of them to live in urban areas where they were hired out to various employers. This made it possible for some of them to find second jobs, working in the off hours to earn money for themselves to buy their freedom. The recently freed individuals, however, were caught in a rapidly evolving political dilemma prior to the Civil War. Over several decades, from about 1789 when Alexandria became part of the District of Columbia, to the mid-1840s, when the federal government retroceded the city to Virginia, Alexandria was, as part of the federal district, a refuge for African Americans, including some individuals who had recently escaped slavery. However, in this period, the degree to which Virginia laws applied or could be enforced in the city was not clear. Virginia passed a law, for instance, in 1805, making it illegal for freed slaves to live anywhere in the state. Attempts were apparently made from time to time to enforce this law in Alexandria, though not with any consistency.<sup>56</sup> Other factors complicated the situation. For instance, while being hired out to city employers could make it possible for an enslaved individual to earn money in the off hours to purchase his

=====  
freedom, the Quaker community pressured its members to avoid business dealings with slave owners, which in turn made it more difficult for the “bondsmen,” as they were called, to find themselves in a position to achieve freedom this way.<sup>57</sup>

The question of whether Virginia’s or the District of Columbia’s laws applied to African Americans in Alexandria was one of the issues that led to an appeal to the federal government to remove Alexandria from the district, which they did by passing special legislation in 1846.<sup>58</sup> Only a few short years later, in 1850, the federal government passed the second Fugitive Slave Act (the first was in 1793). From the late 1840s until the beginning of the war, Alexandria’s free citizens of African descent who remained in the city lived a precarious existence.<sup>59</sup> As an example of the problems that occurred with the retrocession, a school that had existed since 1812 to educate the children within the African American community ceased operation in 1847 because suddenly it was no longer a matter of interpretation whether Virginia laws against educating black residents applied in Alexandria.<sup>60</sup> During the war, however, Alexandria once again began to develop a growing African American community, comprised largely of individuals who had formerly been enslaved and had begun to move either into the city from surrounding plantations or north from areas where slavery had been increasing until the outbreak of the Civil War.

***Other African American Neighborhoods and their Relationship to Uptown***

The other African American neighborhoods that developed around the predominantly white core area of Old Town were related to the Uptown area in several ways. Some families and institutions moved into the Uptown/Parker-Gray area as a result of events in the other neighborhoods. For instance, Mt. Jezreel Baptist Church was created when (as noted above) the older Shiloh Baptist congregation located just outside the district divided over a contentious issue; the new offshoot congregation made Uptown its home. Meade Chapel Episcopal Church, on the other hand, moved into the Uptown/Parker-Gray area from Cross Canal, another predominantly African American neighborhood.<sup>61</sup> The move appears to have been an effort on the part of a white congregation to achieve segregation quietly. By the early twentieth century, the Uptown/Parker-Gray Historic District became home to African American institutions that served African Americans from across the city, including private clubs and segregated schools and libraries.

The city’s first African American neighborhood was in a low-lying area of the Old Town street grid, west of Washington Street and south of Prince Street (several blocks southeast of the Uptown/Parker-Gray Historic District’s boundaries).<sup>62</sup> Because of its topography, the neighborhood was called “The Bottoms” (and later, “The Dip”). The cultural anchor of the Bottoms neighborhood was Alfred Street Baptist Church, an institution founded as early as 1803. The 1855 church building, listed on the Virginia Landmarks Register in 2003 and the National Register of Historic Places in 2004 (VDHR File No. 100-5015-0001), is still located at the neighborhood’s center and actively used by the congregation, although the building has been altered and is now part of a larger modern complex. It is likely that African Americans living along Cameron and Patrick Streets in the Uptown area attended Alfred Street Baptist Church at the time. Another African American neighborhood developed in the early 1800s several blocks east of Washington Street, in the 400 block of South Royal Street. Known as “Hayti” (pronounced “hay-tie”), its residents rebelled against their owners in what is regarded as the first successful uprising of enslaved persons in the Western Hemisphere.<sup>63</sup>

A seasonal community called “Fishtown” developed by the 1850s along the Potomac near Oronoco Street (directly east of the center of the Uptown/Parker-Gray Historic District) consisting of African American workers who cleaned the shad and herring caught by local fishermen. During the Civil War, when the city’s African American population began to grow again, two new neighborhoods cropped up north of Princess Street and east of Washington, known as “The Berg” and “Cross Canal.” The Berg traced its name from a group of African Americans who had moved to Alexandria from Petersburg, Virginia, and Cross Canal was so named because it was across the Alexandria Canal from the rest of the city. Located just outside the Uptown/Parker-Gray boundary, to the northeast, Cross Canal’s families included some of the workers at the Dominion Glass Factory. When the Cross Canal neighborhood grew into residential blocks further west, the new area, known as The Hump, was within the boundary of

City of Alexandria, Virginia**

Section 8 Page 290

=====

the nominated district. As the nineteenth century drew to a close, the city's African American community began to expand from these smaller and earlier neighborhoods into two newer and larger neighborhoods: a section called "The Hill" in the southern half of the Alexandria street grid and "Uptown" (within the nominated historic district) in the northwest quadrant. One of the last African American neighborhoods to develop was the section known as "Colored Rosemont," in the 600 and 700 blocks of West and Payne Streets (and adjoining areas). Colored Rosemont became united with the Uptown/Parker-Gray area when Parker-Gray High School was built there, replacing the older Parker Gray school that had been on a site near the center of the northern half of the nominated area.

By the second quarter of the twentieth century, the African American residential area contained within the Uptown/Parker-Gray Historic District became the city's largest African American neighborhood. Cultural attitudes toward race and official policies about segregation sharpened over time drawing more rigid lines separating Alexandria's white and black neighborhoods. Southern society became more segregated as new institutions were built for African American citizens by government entities, and as the African American community began to build its own private institutions. The Uptown neighborhood gradually became the most logical location for almost all the new institutional buildings, from fraternal lodges to recreational facilities. Other than churches, the institutions with the longest history as segregated facilities were schools.

***African American Schools and Uptown***

Although there are no extant historic school buildings in the Uptown/Parker-Gray Historic District, the development of segregated schools in the neighborhood shaped the district and even gave it the name "Parker-Gray," the most common name currently used for the entire northwest quadrant of Old Town Alexandria. At least three important school buildings helped to shape the district: the Hallowell School for Girls, Parker-Gray Elementary School, and Parker-Gray High School. All were demolished by the 1970s.

Schools were the earliest known African American institutions to develop within the Uptown/Parker-Gray neighborhood. Although the state of Virginia passed laws against educating African Americans, there were opportunities to provide education both before the laws went into effect and at times when enforcement was lax. However, the changing situation gave the schools a precarious existence until after the Civil War. The earliest schools were held in private homes in various parts of the city at least as early as 1809. Schools were conducted by African Americans in some cases and by whites in others, sometimes on a pay basis and sometimes on a free basis. In some cases, the schools primarily conducted evening classes and may have been designed to teach reading and writing to adults rather than children. At the end of the War of 1812, the African American community created its own parallel to the Washington Free School, a school that had been endowed by George Washington and operated from the city's Academy Building. The classes for African Americans were held on the third floor of the Alexandria Academy Building at 604 Wolfe Street, about five blocks southeast of the Uptown/Parker-Gray Historic District. That same year, the academy purchased land at 218 North Columbus Street to start a "Lancastrian" school for girls in the white community. The location of the new building built in 1812 was just outside the boundary of the district. The shell of the building is still standing, incorporated later in the nineteenth century into an Italianate design for a lodge facility (218 N. Columbus Street; it is within the boundary of the Alexandria Old and Historic District).<sup>64</sup> The school at the old Academy Building went out of operation in 1847, as did any other small schools that had apparently been operating until that time in other locations in the city, casualties of the city's retrocession to Virginia.<sup>65</sup>

***Hallowell and Snowden Schools***

After the Civil War, with the help of the Freedman's Bureau, two new school buildings were built for the education of Alexandria's African American citizens. Both school buildings were built by noted African American master carpenter George Seaton.<sup>66</sup> The Seaton School, which was later known as Snowden School for Boys, was built by April 1867. Hallowell School for Girls was opened in November 1867 (originally just called the Alfred Street School; it was renamed the Lee School when Robert E. Lee died; it was later renamed for Benjamin Hallowell, a Quaker who had taught school in the city). The latter school

**United States Department of the Interior  
National Park Service**

City of Alexandria, Virginia**

**Section 8 Page 291**

=====

was funded directly by the Freedmen’s Bureau. Each school was set up with a board of trustees. In the case of the Snowden School, it is known that all members of the board of trustees were African American. Hallowell School was located on Alfred Street between Princess and Oronoco Streets (407-415 Alfred Street) within the boundaries of the Uptown/Parker-Gray Historic District, near the southeast corner of the district. (The building is no longer standing, but the site may have archeological potential.) Snowden School was located on South Pitt between Gibbon and Franklin Streets in the southeast quadrant of the city, the area known as Vinegar Hill. In 1870, the two schools officially became part of the city’s public school system.

***Parker-Gray Elementary School***

While the location of Hallowell School at the corner of the Uptown/Parker-Gray Historic District may have been an indication that the Uptown neighborhood was postured to grow into an important center of the African American community, the role of the neighborhood in the greater community was secured in 1920 when the city consolidated the two 1867 schools into a new city elementary school and built a new building for it within the neighborhood area. Known as Parker-Gray Elementary School, the school was built on Wythe Street in the northern half of the Uptown/Parker-Gray neighborhood. The location placed it at a distance from other, older African American neighborhoods, some of which had already begun to shrink in size or importance, and it made the less dense areas of the Uptown/Parker-Gray area more desirable for African American families seeking to relocate into one larger neighborhood. The name was created by combining the surname of the principal at Hallowell School, Sarah Gray, with that of John Parker, principal at Snowden School for Boys. By selecting this name, the school district established a sense that the school would continue some of the traditions and heritage of the two older schools. The school was overcrowded from the time it opened, and the city’s African American residents generously subsidized it by helping to pay for furniture and books. It was built to be an elementary school, but in time, some high school classes were offered there. Although the older building was referred to as “Parker-Gray High School” on the city’s 1941 Sanborn map, a full high school program through grade 12 was never provided at that location.

***Parker-Gray High School***

By the 1940s, Parker-Gray Elementary School had older students taking high school classes. The situation was not ideal because the school was crowded and because students had to find creative ways to get a complete high school education, since the school did not offer a full program. Some students found ways to relocate to Washington, D.C. to earn a high school diploma, after completing their Parker-Gray coursework, since neither the Alexandria city schools nor any of the nearby white high schools on the Virginia side of the Potomac allowed African Americans access. In 1950, recognizing that the education of the African American community should include more than elementary instruction, the city built a new high school several blocks west on Madison Street in the “Colored Rosemont” neighborhood. Colored Rosemont is now considered a sub-section of the Uptown/Parker-Gray neighborhood, and two blocks of it are included in the district boundary; however, the site of the school is excluded by the current historic district boundary because the building is no longer extant and the parcel contains a new building. The name “Parker-Gray” was transferred to the new all-black high school facility. To avoid confusion, the city renamed the elementary school building Charles Houston Elementary School. The city schools remained segregated by law until the law was overturned in 1965. Up to that time, Parker-Gray High School was the only school offered for African Americans wishing to complete the higher grades. After the end of segregation, the Parker-Gray High School building was used as a middle school facility, but only for a few years. Both the elementary school and high school buildings were demolished in the 1970s, and other buildings now occupy the sites.

Although the Hallowell School Building and the two Parker-Gray school buildings are no longer standing, the fact that they were located in the Uptown/Parker-Gray area secured the African American identity of the neighborhood through the last years of legally enforced segregation policies. The historic district derives significance from the African American institutions that were located there during the segregation era. Even though Alexandria had several older African American neighborhoods, the Uptown neighborhood became the center of the city’s minority community and home to numerous institutions including churches, fraternal lodges, recreational facilities, and commercial businesses oriented to the minority community. New

CONTINUATION SHEET

**Uptown/Parker-Gray Historic District  
City of Alexandria, Virginia**

Section 8 Page 292

=====  
institutions, such as churches, were founded to serve the neighborhood's new residents, while most of the other African American institutions, created between 1900 and 1965 to serve the city's African American community as a whole, were located in the Uptown neighborhood. The institutions in the Uptown/Parker-Gray area that served the larger area included segregated schools, a youth center, and several fraternal organizations.

***Religious Institutions of the Uptown/Parker-Gray Neighborhood***

All the religious institutions known to have existed in the period of significance served congregations comprised of African American members. The historic development of some of the oldest African American religious institutions in the Uptown/Parker-Gray neighborhood illustrates how the neighborhood developed as an outgrowth of other African American neighborhoods near it, with strong ties to older enclaves. Several of the churches that served as early anchors of the community came into the neighborhood as either relocations or extensions of older congregations just outside the Uptown/Parker-Gray area. The churches are significant as centers of African American activity within the neighborhood, as a reflection both of the community's growth as a self-contained residential neighborhood and of the neighborhood's increasing importance as the city's largest center of activity for African Americans in the segregation era. Some of the buildings reflect important trends in local architectural styles and are part of the district's architectural significance; however, on an individual basis, these buildings derive most of their significance for their part in the district's ethnic and social history under Criterion A.

***Meade Chapel Protestant Episcopal Church***

Meade Chapel is believed to be the second oldest African American institution to be housed in an extant historic building in the Uptown/Parker-Gray Historic District. It was originally created in 1869 to serve the Cross Canal neighborhood, northeast of the Uptown/Parker-Gray Historic District. The congregation was founded as a mission of Christ Church, whose 1767 building remains a prominent landmark near the southeast corner of the Uptown/Parker-Gray Historic District. The mission was created not specifically to serve African Americans, but to serve the Cross Canal neighborhood, then a mixed race neighborhood which Christ Church considered to be at a far enough distance to merit a new church. A history of the congregation says: "Although early accounts...do not mention the race of its congregation, it is safe to assume that the congregation was either white or of mixed races under white leadership."

In 1871-72, the congregation set out to create a "colored Sunday School," apparently in recognition of the need for such an institution among African Americans living in the area. In a November 1872 report, parishioner John Janney Lloyd, a member of Alexandria's prominent Lloyd family, reported to the vestry "that quite a number of colored persons had expressed a desire that we would furnish a suitable place to be used as an Episcopal Church for colored persons." The vestry responded to this request in the spring of 1873 by making the church building available to an all-black congregation.

In March 1873, Anna Maria Fitzhugh of Fairfax County (an aunt of Robert E. Lee) offered a parcel in the Uptown/Parker-Gray neighborhood, at the corner of Princess and Columbus Streets, as a new location for the church. The move was announced in the *Alexandria Gazette* on 9 April 1873, but no reference was made to race. A week later, when the intention that the church serve an all-black congregation became public, the neighbors began objecting, apparently an indication that this was a deciding moment in the racial composition of that part of the neighborhood. Although an attempt was made to appease the neighbors by announcing that they were looking for another site, the church was relocated by the end of April 1873 to the parcel Mrs. Fitzhugh had provided. The actual 1870 building was jacked up and moved on rollers from the Cross Canal basin to the new site on Columbus Street. Christ Church used this series of developments to re-frame itself as an all-white congregation, transferring the membership of the African American congregants who attended church in Old Town to the new Meade Chapel location as well.

In 1907, the Meade Chapel congregation decided to erect a new building. Their plans came to fruition in 1912, when the oldest part of the current brick building was built. Moving a block west from the site of the older frame church, they chose their present

CONTINUATION SHEET

Uptown/Parker-Gray Historic District  
City of Alexandria, Virginia

Section 8 Page 293

location at the corner of Princess and Alfred Streets at that time. The building is a contributing resource in the nominated district.<sup>67</sup>

***Baptist Churches***

The Baptist churches that developed in the Uptown/Parker-Gray Historic District, all of which were historically African American, were a combination of offshoots of older congregations and one or two churches that may have been formed as entirely new congregations.

***Third Baptist Church***

Third Baptist Church, housed in a historic building at Princess and Patrick Streets, is probably the oldest building occupied by African American institution at its original location within the Uptown/Parker-Gray Historic District. The core part of the building may also be the oldest extant church edifice in the district. The church was founded in 1865-66, apparently as an entirely new congregation.<sup>68</sup> Its construction, though near the small African American enclave that had existed since the 1810s, may have been a sign that the African American community of the Uptown neighborhood at that time was expecting to grow in upcoming years to include a larger area. The older part of the building may date from the 1860s; however, the church suffered almost complete destruction in an 1895 or 1896 hurricane and was rebuilt as an attractive design reflecting the Richardsonian Romanesque-style architectural details that were in fashion in the 1890s.<sup>69</sup> In 1870, while serving as the pastor of Third Baptist Church, Rev. George Parker became the first African American to be elected to Alexandria City Council.

***Mt. Jezreel Baptist Church***

While Third Baptist Church may have developed independently, Mt. Jezreel Baptist Church, at 317 North Payne Street, grew out of Shiloh Baptist, a church located a few blocks south of the boundary of the nominated district. Although located outside the district boundary, Shiloh Baptist Church considers itself closely related to the Uptown/Parker-Gray Historic District, both historically and geographically. Shiloh Baptist was founded in 1863-65 as an outgrowth of Alfred Street Baptist Church, Alexandria's oldest African American congregation (as discussed above, also located outside the district, several blocks to the south of the boundary).<sup>70</sup> Started during the Union occupation of the city by an organization of fifty former slaves called the "Old Shiloh Society" (originally contrabands who had been housed together at the old slave pen on Duke Street), Shiloh Baptist is still located just a few blocks from the Duke Street slave pen location. A dispute over use of funds led to a group of members leaving the church in 1890. Those who left were among the founders of Mt. Jezreel Baptist Church.<sup>71</sup> (Mt. Jezreel Baptist Church is a contributing resource within the Uptown/Parker-Gray Historic District.) These historically related churches (Alfred Street, Shiloh, and Mt. Jezreel) are all members of the National Baptist Convention, one of several separate denominational frameworks within the African American wing of the Baptist movement.

***St. John Baptist Church***

Other Baptist churches developed in the neighborhood at a later date, often forming without any links to older congregations. St. John Baptist Church (also known as Providence St. John Baptist Church), for instance, began in 1926 when a group of men, who had been congregating on the street to sing, decided they'd like to form a church together. The church built its current building in 1947-48, with additions constructed in 1966-67 and 1983-84.<sup>72</sup>

***St. Joseph's Roman Catholic Church***

St. Joseph's Roman Catholic Church, at 701 Columbus Street, was created by a group of African American members of the city's original Catholic parish, St. Mary's Roman Catholic Church.<sup>73</sup> Located on Royal Street, about four blocks southeast of the boundary of the nominated district, it is the oldest Roman Catholic congregation in Virginia. The African American Roman Catholics had been worshipping together in the alcove of the church for a number of years. In the early 1900s, the group began meeting weekly with a visiting Josephite priest at St. Mary's Lyceum in addition to attending mass together. The Josephite Order of priests, largely comprised of white clergy, was created in 1893 at Baltimore with the sole mission of evangelization to

CONTINUATION SHEET

**Uptown/Parker-Gray Historic District  
City of Alexandria, Virginia**

Section 8 Page 294

=====

African Americans. Subsequently, the group held a meeting and drafted a letter to the bishop of Richmond asking to form themselves into a new congregation. The property at the corner of Columbus Street and Wythe Street was purchased in 1914. Father Charles F. Hannigan, the visiting Josephite who had been meeting with the group, persuaded Mother Katherine Drexel, founder of the Sisters of the Blessed Sacrament and a member of a wealthy Philadelphia family, to donate \$8,000 toward the construction of a church in Alexandria. In 1915, a priest was assigned to the new congregation and construction on the new church began. The church building was designed by Murphy and Olmsted, Architects. The choice to build within the boundary of the Uptown/Parker-Gray area, like the decisions of other institutions in the same era, is an indication that the neighborhood was quickly becoming the center of the city's African American community. The parish grew large enough within a few years to build its own school. Although the school began operating within the church building in 1916, a new school was built at 721 N. Columbus Street. The architect of the Art Deco-style school building is not known. The rectory, a contributing Craftsman-style house located between the church and school, was built in 1921. The architect of the rectory, like that of the school building, is not known. In 1967, the bishop of Richmond re-designated St. Joseph's from an ethnic (African American) mission church to a territorial parish.

**Russell Temple Christian Methodist Episcopal (CME)**

The only Methodist church in the Uptown/Parker-Gray neighborhood is Russell Temple CME, located at 507 N. Alfred Street. The church was organized as a result of a meeting in a home on Gibbon Street (southeast of the district boundary) in March 1941.<sup>74</sup> The initial meeting included Rev. Samuel Taylor and his wife, Rosie Taylor. The site of the current church was purchased in 1949. The building was built in 1952. The CME denomination (originally an acronym for "Colored Methodist Episcopal," but subsequently changed to "Christian Methodist Episcopal") is one of at least three denominations formed when African Americans left the Methodist Episcopal Church between the late eighteenth and mid-nineteenth centuries: one denomination formed in Philadelphia, one in New York, and one in Charleston, South Carolina. One of the reasons that three separate denominations were created was the difficulty of traveling from one part of the country to another to maintain the denominational hierarchy. The CME denomination was organized in 1870 in Charleston. The denomination was closely based on the Methodist Episcopal South Church (a denomination formed by congregations in the South when northern and southern Methodist Episcopal churches could not agree on how to resolve conflicts over slavery in the antebellum era; the largest predominantly white branches of Methodism reunited in 1939). The CME church is the African American branch of Methodism most closely identified with the American South. It is likely that the presence of a CME church in the Uptown/Parker-Gray area reflects a migration of families from South Carolina or another area where the denomination was strongly represented. Russell Temple is the only CME Church in Northern Virginia.<sup>75</sup>

**Other Churches**

Several other religious institutions developed within the neighborhood. They include: Community Presbyterian at 1122 Oronoco Street; Gethsemane Church of God at 110 N. Fayette Street; Sixteenth Temple at 636 N. Patrick Street; Antioch Church at 1120 Queen Street; New Pentecostal Church at 600 N. Columbus Street; United House of Prayer for All People at 324 N. Henry Street; Christ Church of Deliverance at 318 N. Henry Street; and Church of God and Saints of Christ at 634 N. Patrick Street. Most of these congregations occupy either new buildings or other non-contributing buildings converted from earlier uses. An exception is the Sixteenth Temple Church, which is located in a contributing resource — a frame building that was built 1927-1930 for Bethel Presbyterian, a congregation that subsequently moved to a site outside the district.<sup>76</sup> Community Presbyterian, a more recently formed Presbyterian congregation, also occupies a contributing building, built about 1950. The modest-sized building, however, either was built as a house or built using a design that is more residential in character than ecclesiastical. The Community Presbyterian congregation was founded in 1933 in a small house in the 900 block of Wythe Street, several blocks away from its current location. Antioch Church occupies an important Art Deco-style theater building, the former Carver Theatre (built in 1948 to a design by architect John Zink,<sup>77</sup> later called the King's Palace, the theater closed in the 1960s). A Seventh Day Adventist church existed at 1020 Pendleton Street from around 1900 through the 1950s, but the site of

the church building is now a vacant lot. (The building that had housed the Seventh Day Adventist church was demolished in the 1950s.)<sup>78</sup>

***Other Institutions***

The Uptown/Parker-Gray neighborhood has several other institutions either created by or for the African American community that occupy prominent buildings within the district. An example created by the African American community is the IBPOE Hall at 227-229 N. Henry. Nationally, the fraternal lodge, known as the Improved Benevolent Protective Order of Elks in the World (IBPOE of W), was created about 1900 when African Americans attempted to join the Benevolent and Protective Order of Elks and were refused.<sup>79</sup> They formed a parallel national organization and started chapters in many cities. Alexandria had a strong IBPOE lodge. (At the national level, the white BPOE order initially challenged the IBPOE in court for using the same ritual and some of the same graphics, but the case was later dropped, about 1910, and the groups agreed to coexist peacefully.) By 1904, the lodge members had built their original building at 227-229 N. Henry; by 1932, they had greatly expanded and remodeled it. One of the largest social halls of any kind within the boundaries of the Uptown/Parker-Gray Historic District, the IBPOE Hall is an important center for the African American community within the neighborhood and across the city and a focal point of the nominated historic district. (A historically white fraternal organization, the Fraternal Order of Eagles, also has a lodge facility in the district near the southern boundary, at 1015 Cameron Street, in a building built in 1958.)

***Other African American Institutions***

Other private institutions within the district established by African Americans include an American Legion lodge (William Thomas Post 129) at 224 N. Fayette Street and a Masonic lodge (Lincoln Lodge #11) at 1356 Madison Street. Both are contributing buildings. The American Legion lodge occupies a frame building in somewhat deteriorating condition. It has features, such as exposed rafter ends, characteristic of mail-order buildings from circa 1910-1940. The building, however, dates from circa 1944 and was originally built to house a nursery school operated by the city school system. It has been an American Legion lodge since circa 1950. The lodge was chartered in 1931 and is named for the first African American from Alexandria killed in World War I.<sup>80</sup> In the segregation era, it was the only American Legion lodge in the city open to African Americans. The Lincoln Masonic Lodge occupies a small house in the heart of the Colored Rosemont section of the nominated district. A bronze plaque on the building's façade contains the inscription: "Alfred S. Hamilton Building," followed by additional information on a past member by that name to whose memory the lodge dedicated the building in the 1980s. The Hamilton Building is part of a row of three freestanding shed-roofed, one-story brick houses notable for their small scale and simple design. However, the architecture of the front of 1356 Madison Street is currently masked by a front porch enclosed with scored plywood, and the building's contributing status is based on its significance under Criterion A. The city's 1958 Sanborn map also indicates that two or three small buildings within the district boundary were used as either lodges, clubs, or community centers at that time. None of the organizations housed at these locations is known to be still in existence, and the buildings have been demolished or incorporated into private houses since then.

***Recreation Facilities***

The Uptown/Parker-Gray neighborhood has at least two extant historic buildings that were built as recreation centers for organizations headquartered outside the district or by local benefactors from outside the neighborhood. Both were built exclusively for white residents during the segregation era. One was a USO club house at 1605 Cameron Street, now incorporated as a wing of the Jefferson Houston School building. The other is the Alexandria Boys and Girls Club building (originally known as the Alexandria Boys Club) at 401 N. Payne Street.

The USO Club, built in 1942 and designed by architect Ward Brown, was one of three USO club houses built in Alexandria during the war. It was one of the first club houses of this kind constructed in the United States.<sup>81</sup> Nationally, the United States Service Organization (USO) is a private organization formed in 1941 and chartered by the United States Congress to bring

**United States Department of the Interior

City of Alexandria, Virginia**

**Section 8 Page 296**

entertainment to soldiers to boost troop morale. The organization continued to operate, but the clubhouses built in places like Alexandria generally passed out of existence. There was also a USO club for African American citizens at Pendleton & Patrick Streets. (The building is no longer standing and the site is occupied by non-contributing row houses.) The Pendleton Street USO doubled as overflow space and cafeteria space for Parker-Gray Elementary School during the war. In 1945, one of the USO clubs in the Uptown/Parker-Gray area had closed, and the Hopkins House, a social service umbrella organization in the neighborhood (now located in a non-historic building at 1224 Princess Street), persuaded the city to allow the closed facility to become a recreation center for African American residents of the neighborhood. It became one of the first community centers and recreation centers available to Alexandria’s African American citizens. The Cameron Street building was turned over to the city in 1946. Only the Cameron Street building is now standing, its design having been altered to make it part of a school complex. However, it is still used for community center and recreation functions. (The adjoining Jefferson Houston School site was formerly the location of the city’s all-white high school, constructed in 1915, but now contains a school building from the 1980s.) The Cameron Street USO building has been renamed the “Dr. Oswald Durant Memorial Center for Visual/Performing Arts,” in honor of an African American physician who came to the city from South Carolina in 1927 and who served in the military during World War II. The Durant Center building is a good reminder of the kinds of meeting places that developed in Alexandria during the World War II years.

The Alexandria Boys and Girls Club (originally known as the Alexandria Boys Club), at the corner of N. Payne Street and Princess Street, was created in 1936 as a philanthropic project of Dr. Robert South Barrett, Jr. Barrett, who is also credited with designing the Colonial Revival-style building, was the son of Robert South Barrett, Sr., a prominent Alexandria minister, and Kate Waller Barrett, a philanthropist and social worker.<sup>82</sup> Robert South Barrett, Jr., also gave the city’s Queen Street library (just outside the boundary of the nominated district) to the city as a memorial to his mother. One of the few individual focal points among the district’s large collection of Colonial Revival-style brick buildings, the site is most significant as a continuously operated recreational facility within the district. Built as a facility for white residents, it is one of the district’s resources that reflected racial divisions within the neighborhood during the era of segregation.

**Significance in the Area of Social History: The Uptown Parker-Gray Historic District and the Segregation Era**

The Uptown/Parker-Gray Historic District reflects the separateness that was imposed upon the minority community from the outside during the segregation era in addition to representing the activities of the people who lived there as a culturally based ethnic neighborhood with institutions that reinforce communal identity. To a large degree, the lines that separated neighborhoods during the segregation era were created by the non-African American portion of the community, and they also may have been perceived more by outsiders than by the residents. However, as the city’s population became larger, and as the nominated district became the city’s largest African American neighborhood, the neighborhood grew into an increasingly complex part of the city under the concept of “separate but equal” facilities. In time, it had its own institutions, recreation centers, gathering places, commercial establishments, and other facilities for various kinds of neighborhood functions. By the late 1930s, the Uptown/Parker Gray Historic District was the site of an important chapter in the official segregation of city libraries. By the early 1940s, it was one of the first places in the United States where federal programs to provide housing for defense workers were used as a way to clear away an existing African American neighborhood and to build officially segregated public housing. A number of the buildings in the district reflect segregation. These include both legally enforced segregation, such as the library facilities, schools, and public housing; and informally segregated properties, such as commercial establishments, movie theaters, and clubs, churches, and residences.

***Character of the Neighborhood as it Gradually Became a Distinct Place***

The Uptown/Parker-Gray neighborhood appears to have become a distinct and separate neighborhood gradually. Some of the small enclaves where African American families made their residences may have been regarded as exclusively African American real estate at various times, but the neighborhood also includes the sites of large homes built by prominent white citizens

=====

beginning in the early nineteenth century; tracts of land occupied by military activities in the mid-nineteenth century; and locations of factories beginning in the late nineteenth century. It also contains, especially in the outer blocks of the district, twentieth-century row house developments built exclusively for white residents. By the early twentieth century, however, most of the area within the nominated boundary was regarded as the city's main African American residential area. The book *Virginia: A Guide to the Old Dominion* (the Works Progress Administration (WPA) Writer's Guide for the commonwealth) describes the Uptown area about 1940 as a lively, interactive community in the following passage:

“Alexandria’s diurnal noises give way at night to a silence broken by puffing trains, the occasional whistling of steamers, and the drone of airplanes... On Saturday night the shops of King Street glitter and swarm with people... while down Washington Street passes a queue of automobiles. On Sunday a lethargy descends on Alexandria. In the principal Negro quarter, a section of nondescript row houses just north of King Street and West of Washington Street, groups sit chatting in doorways, on stoops, or in rocking chairs on the sidewalks, as they watch children at play and couples en promenade displaying their Sunday best.”<sup>83</sup>

Several things combined to make the Uptown/Parker-Gray the “principal Negro section” of the city. These included the choice to build the city’s African American schools and recreation facilities in the neighborhood. However, as the neighborhood became the central location for the city’s African American public facilities, it also became home to leaders and educators of the African American community, as well as businesses owned by or primarily serving African American clientele.

***Prominent African American Citizens***

Among the leading citizens of the Uptown/Parker-Gray neighborhood in the late nineteenth and early twentieth centuries were educators, clergymen, business owners, and veterans. Some were former slaves or the children of former slaves, and some were among the first African Americans in the city to serve as elected officials. Prominent African Americans who made the Uptown/Parker Gray area their home by the early 1900s included educators like Henry T. White, the principal at Snowden School for Boys, who became the first principal of Parker-Gray Elementary School. Prior to the construction of Parker-Gray School, he was also the only man to serve as principal of Hallowell School for Girls. White lived at 511 Henry Street, beginning about 1903, but moved to 1012 Pendleton Street about 1910, where he lived until his death in 1950. Born a slave in Pittsylvania County, Virginia, in 1862, he taught at segregated schools in other parts of Virginia before coming to Alexandria. In his seven years as principal at Parker-Gray Elementary School, followed by seven more years of teaching there, he faced great challenges in a crowded facility that relied on charitable parents and neighbors within the African American community to provide supplies when the public school system did not always provide everything the facility needed. Thomas and Sarah Foster lived in 221 Patrick Street with their eight children in the 1870s and 1880s. Thomas was a former slave. The two oldest sons, George and Lorenzo Foster, were Buffalo Soldiers who served in the 10<sup>th</sup> U.S. Cavalry in the Great Plains and the Southwest. George had enlisted in the United States Colored Troops in 1863 and was one of the first African American recruits to serve in the Civil War. The Uptown/Parker-Gray area was also home to people like Rev. George Parker, pastor of Third Baptist Church, who was the first African American to serve on Alexandria City Council.

***The Smallest Houses and Tenement Rows in the District***

The neighborhood also had many poorer families whose stories are less well recorded. Some of the smallest houses in the Uptown/Parker-Gray area were among the first to disappear when new developments occurred in the community. At least four rows of small houses are labeled on the city’s Sanborn maps in various years as “Negro Tenements.” These included a row in the 200 block of N. Payne Street, one in the 200 block of N. Henry Street, and another in the 1100 block of Princess Street. The fourth was in a section of alley known as Park Place, between the 200 block of N. Payne Street and the 200 block of N. Fayette Street. Similar rows were also found outside the nominated area, labeled not only as tenements, but sometimes “Negro Shanties” and sometimes “Negro Dwellings.” A large group of small houses occupied a block or two of the neighborhood formerly known as The Hump, a section of the northern part of the nominated district that was cleared in the early 1940s for the construction of

United States Department of the Interior  
National Park Service

NATIONAL REGISTER OF HISTORIC PLACES  
CONTINUATION SHEET

Uptown/Parker-Gray Historic District  
City of Alexandria, Virginia

Section 8 Page 298

Samuel Madden Homes and James Bland Homes. The Hump neighborhood also included two small churches that may have passed out of existence when the area was cleared. Removal of small houses in other parts of the district may account for the fact that the district has very few alley buildings, apart from small garages built in the mid-twentieth century. All of the houses found on the neighborhood's alleys were constructed after 1980, and a large percentage of the garages and other buildings date from shortly after the end of the Period of Significance, 1959.

***African American Businesses***

In its life as the city's largest African American neighborhood of the segregation era, the Uptown/Parker-Gray Historic District became home to some of the most enterprising members of the African American community and to a number of businesses owned by and serving African Americans. The businesses included restaurants and bars, beauty shops and barber shops, grocery stores, drugstores, and similar commercial businesses. In the listings found in Hill's 1936 *Alexandria Directory*, the businesses in the Uptown/Parker-Gray area marked as "c" for "colored" included four restaurants, two bakeries, three groceries, two dressmakers, six barbers, three lawyers, three physicians, a dentist, a real estate office, an insurance company, an auto repair shop, and a theater.<sup>84</sup> In advertisements that appeared in a 1942 brochure printed for the dedication of the new USO building, hair-care businesses gave lively descriptions of what they had to offer.<sup>85</sup> L.E. Randolph had a "Modernistic Tonsorial Parlor" at 210 N. Payne Street, providing "face and scalp treatments" and "ladies' bobs" (women's short haircuts). J.M. Goins operated Mozelle's Deluxe Beauty Salon offering "the VIOLET RAY Treatment...Guaranteed to stimulate the scalp and promote hair growth." Grocery stores and pharmacies listed their products more directly in the same brochure. The Sunshine Market at 601 Columbus Street had a "complete line" of meats, groceries, and vegetables. A.H. Collins offered "drugs, refreshments, and sundries" at the Community Drug Store at Queen and Alfred Streets. Some businesses, such as laundries, were likely serving clientele beyond the neighborhood; Sanborn maps for the city show about a dozen laundries within the district boundary in the first half of the twentieth century.

The locations of bakeries and confectionery shops that existed in the district have been identified at various times as landmarks of the African American community. The Alexandria Home Bakery (as listed in *Hill's 1936 Directory*) was located at 521 Henry Street. An article from the *Alexandria Gazette* says that:

"Jackson's Home Bakery was one of Alexandria's best known black-owned businesses during the 1920s and 30s. Old friends here can't remember Mr. Jackson's first name. He was simply Baker Jackson, a great salesman: 'You could just be talking to him, and he'd sell you something.'"<sup>86</sup>

The Home Bakery building was actually a small, frame, Italianate-style house immediately behind a similar frame house at 1022 Pendleton Street. The two buildings became connected as the business grew. Jackson continued to live upstairs after he retired. After his retirement, the first story became a barbershop. By 1958, the Sanborn map shows it as a restaurant. Mills Bakery was located at 921 Oronoco Street from about 1888 to about 1910. An African American-owned confectionery shop called "Jimmie's Place" was located at 728 N. Patrick Street in 1936.

***Highway Oriented Businesses***

By the 1950s, the neighborhood had commercial businesses oriented to travelers passing through on U.S. Route 1, including carry-out shops, gas stations, and automobile dealerships; however, it is not known how many of these had African American owners. The Blue Silver Diner, at the corner of Henry and Wythe Streets (now Blue and White Take-Out, 1024 Wythe Street), came to Alexandria as a pre-fabricated metal building in 1951 from Orlando, Florida, where it was manufactured by the Silver Coach Company, Inc.<sup>87</sup> Initially owned by a Greek-American family, it was later sold to African American owners as part of a long succession of owners. The gas station at 434 Henry Street, one of the neighborhood's only gas stations, was built about 1955. A large automobile dealership was built at 500 N. Fayette Street about 1945.<sup>88</sup> The neighborhood also had numerous other auto repair shops and even a battery repair shop (400 N. Henry Street) by 1958.

City of Alexandria, Virginia**

**Section 8 Page 299**

=====

***Businesses Owned by White Merchants Serving an African American Clientele***

At the core of the Uptown/Parker-Gray Historic District, a few commercial businesses were operated by white families, including several German, Jewish, and/or Eastern European families, who may have been recent immigrants. An early example was George Baier, a former employee of Portner’s Brewery, who had a saloon at 300 N. Fayette Street in the late nineteenth century. A few decades later, Louis Rosen and Samuel Rubin ran the Royal Meat Market from a mid-nineteenth-century commercial building at 300 N. Patrick Street. In 1940-41, they built a new shop building across the street at 301 N. Patrick Street. It was designed in the Art Deco style by architect Paul S. Lubienski. The 1941 Royal Meat Market Building was purchased by Ebenezer Baptist Church in 1966 and is now used as an educational facility with the name “Collins Educational Building.” A family named Shapiro had the Check Soda Company complex at 207-213 N. Payne Street. They also owned a store in the neighborhood. People who remembered Mrs. Shapiro later observed “she always made sure the neighbors had food.”

***Movie Houses***

As is often the case in minority neighborhoods of the segregation era, among the most important commercial establishments in the Uptown/Parker-Gray Historic District were the community’s movie theaters. The Capitol Theatre was built in 1939 by H.A. Wasserman at 300 N. Henry Street (the corner of N. Henry and Queen Streets) to serve the city’s African American community. It replaced an earlier theater building called the Lincoln, which had been built about 1920 at the same site. The Capitol was designed by John Zink in a modest interpretation of the Art Deco and Moderne styles. Zink used a wall of curved brick at the street corner and a stainless steel canopy intersecting it to make the building eye-catching. A simple but sizable building erected by the construction firm of D.E. Bayliss, the Capitol had the unusual distinction of having been built in only twenty days. In 1947-1948, a second “blacks only” theater was built, just a block away at the corner of N. Fayette Street and Queen Street. Called the Carver Theater, the building was also designed by John Zink. In this case, with a much larger sized lot and a larger building program, Zink used curved walls again, but this time framing the entrance like two Romanesque castle towers, yet making it distinctively Moderne in style and detail. The Carver had seating for 700 in an auditorium that was decorated with murals. Along the Queen Street side of the building, the project included creating several small storefronts for barbers, grocers, and similar shops. The Capitol Theatre and the Carver Theater define prominent corners in the Queen Street business district, the core area for African American commerce in the city during segregation. The shops along Queen Street reinforced the commercial character of the block, even though most of the buildings on the opposite side of the street were modest residences.

***Robert Robinson Library, now the Alexandria Black History Center***

The most important African American heritage site within the Uptown/Parker-Gray Historic District is undoubtedly the former Robinson Library located at 638 North Alfred Street, now the Alexandria Black History Center. Now serving as a community center, research center, and local history museum, but still symbolizing the inadequate results of the doctrine of “separate but equal” facilities, the building was the direct result of a nationally publicized effort on the part of Uptown/Parker-Gray citizens to assert their rights to use the city’s main public facilities.

Robinson Library came about as a result of what was probably the first use in the United States of a “sit-in” as a form of peaceful demonstration on the part of African Americans to protest segregation. More than two decades before the well-known 1960 Woolworth lunch counter sit-in occurred in Greensboro, North Carolina, the sit-in at Alexandria ironically resulted not in ending segregation, but in creating a separate library for African Americans. It occurred because the city’s new public library did not offer African Americans the same library card and lending rights that it offered to white citizens. The library, where the event actually took place, was a new facility, the first free public library ever built in Alexandria, completed in 1937. Still in use, it is located on Queen Street between N. Washington and N. Columbus Streets, near the southeast corner of the district.

Just as the construction of Robinson Library in 1940 was an ironic outcome of the 1939 sit-in, the earlier decision, that the 1937 library would be for whites only, was ironic for several other reasons, even though it occurred at a time when pro-segregation sentiment was strong throughout the South. The library had been built on the site of a Quaker burial ground, established by the

**United States Department of the Interior

**Section 8 Page 300**

=====

same Quaker congregation that had encouraged African American families to settle in the Uptown/Parker-Gray area in the nineteenth century. The main benefactor of the library building was Robert South Barrett, Jr., who built it as a memorial for his mother, Kate Waller Barrett, a philanthropist and social worker. Robert South Barrett, Jr., had given the Boys Club facility to the Uptown/Parker-Gray neighborhood just a year or two earlier, and the city had apparently considered using the same initiative to build a library for African Americans instead of the recreation facility at that time, but the neighborhood apparently chose the recreation center. In spite of the ironies, though, segregation of public accommodations in the South was customary at the time and had been legal since the 1896 *Plessy vs. Ferguson* court case in which the term “separate but equal” had been made the central principle. When the city built its first public library, the white members of the library board and the other city leaders at the time began with the assumption that the new facilities would be exclusively for white members of the community.

On 17 March 1939, Samuel Wilbert Tucker, a local African American attorney, and George Wilson, a retired army sergeant, went to the library and asked for an application to get a library card. They were told that African Americans were not to be issued library cards at this facility, as the two-year-old library had been created as a facility for “whites only.”

Born in 1913 at 916 Queen Street, Samuel W. Tucker had firsthand knowledge of how segregation affected the education of African Americans. To complete his education, he had attended high school in Washington, D.C., claiming residency there, although he was technically still a resident of Alexandria. In 1933, at age 20, he graduated from Harvard University and returned to Alexandria. Although he did not earn a law degree, he studied the law on his own and passed the law exam the same year that he graduated from Harvard. He was admitted to the bar in 1934. Samuel W. Tucker practiced law in the Uptown/Parker-Gray area for many years. After serving in the infantry in World War II, he participated in litigation over desegregation against more than 50 school boards in the 1950s and 1960s. He died in 1990.

In August of 1939, Attorney Tucker, who lived near the new Kate Waller Barrett Memorial Library and passed it every day (in fact, he had to pass it to go to Washington, D.C., where he regularly visited libraries as part of his law practice), decided to take action toward integration. He trained five African American male youths to prepare them for an audacious defiance of library rules and regulations. On 21 August 1939, they entered the library peaceably, one at a time, and courteously asked for a library card. Each was refused. Each then, according to Attorney Tucker’s instruction, went to the stacks and selected a book to read. Taking the book to a table with no two people at the same table, each one read his book quietly as the library staff was thrown into a panic. The librarian, Miss Catherine Scoggin, asked them to leave, but the five stayed seated, remaining perfectly courteous as they had been prepared by Attorney Tucker to do. Miss Scoggin, unsure of how to handle the situation, left the library and went across the street to alert the city manager who, in turn, called the police. The five youths continued to read quietly until the police arrived and arrested them for disorderly conduct. After an initial hearing, in which Attorney Tucker and the city attorney offered opposing arguments, the youths were released until they could be tried. The case was put off indefinitely, with a series of continuances, and was never actually resolved. However, it placed the white community on the defensive, as reflected in the press coverage that followed.

In one example of the press coverage, Mrs. Albert Smoot, the chair of the library board, attempted to explain the library’s policy in a letter to the editor. She detailed earlier discussions that had occurred about building a separate library for African Americans. She pointed out, for instance, that the city had considered building a library for black citizens when the Boys Club was being planned, but that the community had apparently preferred to have a recreation center (for white citizens) instead. The event got national publicity, but only briefly because international news was unfolding in Europe, as Hitler invaded Poland just a few days after the Alexandria story occurred.

Meanwhile, Attorney Tucker arranged for other African Americans to go to the library and ask for a library card at various times, and he filed a civil lawsuit on behalf of Sargeant Wilson over the original attempt at getting a library card. The case was heard

=====

on 10 January 1940. Although the judge refused the plaintiff's petition, he also admitted in his remarks that he could see that Alexandria had broken a state law regarding provision of equal facilities.

After the sit-in, the library board considered its options, including several different ways to provide separate library facilities for the African American citizens. Allowing African Americans equal access to the Barrett Library collections was not considered as an option. After considering adding a special wing to Barrett Library, or re-working the library space at Parker-Gray Elementary School, they decided that a new library building specifically for blacks was the best choice. They built Robinson Library quickly enough that some applicants that Attorney Tucker sent in later for library cards at Barrett Library were told that it wasn't necessary to give them cards because a new library was already under construction for their use. When Sargeant Wilson returned to ask again for a card, he was issued one for the new Robinson Library. City council voted to approve funding for Robinson Library on 12 January 1940, just two days after Attorney Tucker's suit on behalf of Sargeant Wilson was heard in court. The Robinson Library was built quickly, opening its doors by 22 April 1940. To Samuel W. Tucker, the construction of Robinson Library was a sign that his effort for integrated facilities had been defeated. He was outspoken in refusing to be issued a card for the new library. While separate, the new library was far from equal, at a smaller scale, with cast-off books, used furniture, and much lower budgets for construction and administration.

Although the Kate Waller Barrett Memorial Library building, where the sequence of library card applications and the sit-in itself occurred, lies just outside the boundaries of the Uptown/Parker-Gray Historic District, the Robinson Library Building (now the Alexandria Black History Center, at 632 N. Alfred Street) and Samuel W. Tucker's house (916 Queen Street) are both located within the district. The three buildings together represent important dimensions of Attorney Tucker's efforts: the proximity of his home; the proximity of the two libraries to one another and to the Uptown/Parker-Gray neighborhood; and the stark contrast between the two public buildings. Attorney Tucker had the foresight to apply principles to his desegregation efforts that became widely known and important in the Civil Rights movement a quarter century later. This included not only the sit-in itself, but also the peaceable and courteous manner in which it was undertaken and the legal actions that followed. He trained the youths involved in the sit-in on how to dress, what to say, and where to sit, to eliminate all reasons for their arrest other than race itself. Although he was disappointed with the results of his actions, the real results came more than two decades later when the same techniques proved more effective on a broader stage. By 1965, the Uptown/Parker-Gray neighborhood began to see these results as legal segregation was officially ended and as the neighborhood's schools and libraries became integrated. However, the library segregation story that unfolded in 1939-1940 was a sign of things to come in the Uptown/Parker-Gray Historic District. In fact, a number of far-reaching decisions were made with regard to segregation policies and construction of segregated facilities within just a few years following the library sit-in.

***New and Existing Housing Programs Geared to Defense Workers as Well as the Poor***

In 1940, Congress authorized the United States Housing Authority (USHA) to use funds that had been allocated to low-income housing projects in the United States Housing Act of 1937 for the construction of houses in neighborhoods where better quality housing was needed for defense workers. The mobilization to prepare for World War II, the existing programs were transformed from an early goal of eradicating poverty to a focus on creating housing for defense workers, the areas containing small houses, that were run down or appeared to be inadequately designed in cities like Alexandria, became logical locations for new public housing. Because the projects displaced African Americans in most of these neighborhoods, including African American defense workers, and because society was both formally (legally) and informally segregated at the time, the programs were designed to build two kinds of projects, those designated for African Americans and those designated for whites.

***The Impact of Public Housing on the Uptown/Parker-Gray Area in the 1940s and 1950s***

By the end of 1940, public housing projects were under construction in several parts of Alexandria. The first project in the Uptown/Parker-Gray area was John Roberts Homes, completed by 1941 in the block bound by Oronoco Street, E. Braddock

**Section 8 Page 302**

=====  
 Road, N. West Street, and the RF&P Railroad tracks, just outside the district boundary. (The project in question was demolished in 1982 and replaced by new buildings.) John Roberts Homes consisted of twenty-one wood-frame buildings each of which contained between four and ten units. Several blocks of houses and a few small church buildings were cleared away in The Hump neighborhood, north of Madison Street at about the same time to provide a place for temporary housing trailers and a future site for other public housing. By 1942, the USHA had constructed the four-building, fifteen-unit Ramsey Houses project in the 600 block of Patrick Street exclusively for African Americans. By 1944, a two-block public housing project for African Americans had been constructed between N. Patrick and N. Henry Streets in the area north of Madison Street as part of Samuel Madden Homes. In the 1940s, Parker-Gray Elementary School began offering some high-school-level classes, and in 1950, the city built the Parker-Gray High School building. By 1954, the initial phase of James Bland Homes was completed for African Americans in a four-block area north of Madison Street, near the former Parker-Gray Elementary School building (by then, renamed Charles Houston Elementary School), and by 1959, the final block of the James Bland Homes project had been built north of Montgomery Street between N. Alfred and N. Patrick Streets.

In short, by 1959, publicly funded projects transformed about ten blocks of the Uptown/Parker-Gray area, or about 20 percent of the neighborhood, into new buildings nearly all in brick and in a consistent Colonial Revival style, designated exclusively for African Americans and owned or managed by the local government. The transformation occurred in a 19-year period, although more than half of it was completed in about a two-year period, beginning just after the completion of Robinson Library. The impact of public projects upon the African American community of Uptown/Parker-Gray was immense and undeniable: in the four or five decades that followed, what began as segregation-era public initiatives determined much of the community's destiny long after formal segregation ended. It shaped the Uptown/Parker-Gray in many ways that continued beyond the 1959 end of the Period of Significance to the present.

***Uptown/Parker-Gray since the End of the Period of Significance***

The evidence in the built environment suggests that the Uptown/Parker-Gray neighborhood never stopped transforming, but it may have slowed down by the 1960s, and then gradually gained momentum again in the 1980s. Public housing continued to be built, with the Andrew Adkins project (just outside the district boundary) between Wythe, Madison, N. West, and N. Fayette Streets in 1968 and the Jefferson Village project (within the boundaries but not contributing) between Queen, Princess, N. West, and Earl Streets. Commercial properties, especially along N. Patrick and N. Henry Streets (US Rt.1) continued to evolve with the times. Typical remodeling materials appeared on some of the district's frame houses, from Inselbrick and Inselstone to aluminum and vinyl siding. Metal replacements for porch columns became a common change, as did replacement windows in some areas. In general, Alexandria continued to grow, but mainly with new housing areas in what is now the western half of the city, until changing taste led to renewed interest in urban areas and a gradual increase in density in the city's older neighborhoods like Uptown/Parker-Gray. By the 1980s, the neighborhood's housing stock was attractive to people moving into the city from other parts of the country. The 1984 effort to list the district in the National Register of Historic Places was opposed by long-time African American residents as an avenue of gentrification. Instead, a compromise was struck and a local historic district was set up through the city. Block by block, many of the historic frame houses have been restored since then, and many infill buildings have been built on vacant parcels. Sometimes the new buildings occupy alley sites; sometimes they occupy whole city blocks; and sometimes they finish out aggregated historic rows where there had been gaps. In general, the new buildings have been increasingly sympathetic in design to the older fabric. Denser mid-rise complexes have appeared since the year 2000 in a few whole-block sites, including one or two that are currently under construction.

**Archaeological Potential**

The Uptown/Parker-Gray Historic District has numerous sites with archeological potential. The city's archaeology program, Alexandria Archeology, has spearheaded several below-ground investigations in the district and has also developed maps that show sites of historic institutions, African American heritage sites, Civil War sites, disturbed and undisturbed areas, and similar

City of Alexandria, Virginia

Section 8 Page 303

resources that could yield additional information in future investigations. Some of the sites, which are locations of key properties in the neighborhood's African American history, may have been disturbed; several different generations of buildings have been constructed on sites such as that of the Parker-Gray Elementary School, for instance, including one that was planned as the project to prepare the nomination for the district was underway. On the other hand, some of the earliest residential enclaves in the district occupied buildings that are still in place, or appear to be partially in place within later designs, and these locations have potential for future investigation. Since a large portion of the district was occupied by military installations, especially temporary ones during the Civil War, it is difficult to predict what might be uncovered in future work within the district.

ENDNOTES

<sup>17</sup> The date of 1820 is derived from the approximate date that has been determined for several of the district's earliest contributing resources. The 1959 date is based, in accordance with Criteria Consideration G, on the year in which the last block of the James Bland Public Housing development was completed. The majority of the James Bland project was built in 1954.

<sup>18</sup> Col. George Gilpin completed the first map of the enlarged grid of the town of Alexandria in 1797-98. He was officially named City Surveyor of Alexandria in 1798. For more information, see: <http://www.profsurv.com/archive.php?issue=21&article=264> .

<sup>19</sup> The enclave of African American residents who lived in the vicinity of the corner of North Patrick Street and Cameron Street is known primarily through census data and through work conducted in the last 30 years by Alexandria Archaeology and related Alexandria-based agencies and groups. The enclave is believed to be the same place as Grantsville, a neighborhood name used in several historical documents from the period. Another neighborhood name used in some documents, Newtown, is believed to refer to the area west of North Henry Street.

<sup>20</sup> Powder Houses were normally and logically built in the least dense part of a city at this time, as a precaution against civilian casualties from explosions. Often the only house in the vicinity was the home of the person in charge of guarding and tending to the powder supply. This area of the city also had a rope walk, where ropes were made. This was another kind of land use appropriate to an open, undeveloped area.

<sup>21</sup> Additional information on the powder house is available through Alexandria Archaeology, a division of the Office of Historic Alexandria.

<sup>22</sup> Alexandria Archaeology has researched and mapped these encampments over the 30 years since the city program was created. Information on these sites was derived from the primary and secondary material they were kind enough to make available.

<sup>23</sup> Additional information on the Government Bakehouse and other military installations in the Uptown/Parker-Gray area is available through Alexandria Archaeology, a division of the Office of Historic Alexandria. Also see: Brandes, Stuart Dean. *Warhogs: A History of War Profits in America*. Lexington, Kentucky: University Press of Kentucky, 1997.

<sup>24</sup> About 60% of the residents in the newly developed rows along North Columbus and Alfred Streets, near their intersections with Oronoco and Wythe Streets, in 1859, were recent immigrants from Ireland. The same vicinity had a mixture of African Americans and recent immigrants from Italy by the 1930s. See research and poster by Don DeBats on Alexandria in 1859, on file at Alexandria Archaeology, and *Hill's Alexandria Directory...*, 1936.

<sup>34</sup> The book *Buildings of Virginia, Tidewater and Piedmont* contains a good synopsis of Alexandria's relationship to the rapidly-changing landscape of the surrounding area in the twentieth century:

"Alexandria remained the only urban area of any size in northern Virginia well into the twentieth century. The remaining area was largely agricultural with a few small farming villages. Until World War II, the northernmost counties—Arlington and Fairfax—remained rural, but then changes started. In 1940, Arlington's population was 57,040; by 1948 it had grown to 123,832. Fairfax [County] in 1950 had about 1,500 farmers and was the greatest milk-producing county in the commonwealth; by 1970 it had only twelve farmers left."

<sup>47</sup> The African American enclave grew within the district incrementally, sometimes purchasing or occupying houses or other buildings that had been built by other groups. However, this pattern is less evident here than it is in many other historic districts, because the neighborhood was largely vacant prior to the Civil War and many of its blocks were developed at the same time that the African American community was growing. The nominated Uptown/Parker-Gray Historic District is slightly larger than the area associated with African American families at the end of the Period of Significance. Hill's Directory of Alexandria that a majority of the residences north of Cameron Street between North West Street and North Columbus Street were occupied by African American families in 1936. Only one or two blocks in this area were predominantly occupied by white residents at that time. However, historical information indicates that the area west of North West Street, particularly Alexandria Village, were occupied exclusively by white residents in the 1940s and 1950s. The same is true of the 100 blocks (the block between King and Cameron Streets) of North Fayette and North Payne Streets, although African Americans made up about half of the residents in the 100 block of North West Street.

=====  
Lancastrian Free School, was located at 218 North Columbus Street, near the Quaker meetinghouse and near the southeast corner of the Uptown/Parker Gray Historic District. The location was just outside the boundary of the district, and the shell of the building is still standing, incorporated later in the nineteenth century into an Italianate design for an Odd Fellows lodge (it is within the boundary of the Alexandria Old and Historic District, NR 1966, as amended in 1984). The Washington Free School, however, was conducted on the third story of the old Academy Building at 604 Wolfe Street, also still standing and within the Alexandria Old and Historic District, about five blocks southeast of the boundary of the Uptown/Parker-Gray Historic District.

<sup>61</sup> Randle, Julia E. *Meade Chapel: The Early Years*.

**BOUNDARY DESCRIPTION**

The Uptown/Parker-Gray Historic District is located northwest of the existing National Register-listed Alexandria Historic District in the City of Alexandria, Virginia. The western boundary lines were drawn to include architecturally related buildings up to topographic barriers, such as the raised railroad tracks at the district’s western edge, and to exclude new buildings in some of the outermost blocks. Boundaries are outlined on the attached scaled map labeled Uptown/Parker-Gray Historic District, City of Alexandria, Virginia, obtained from the Department of Planning and Development in the City of Alexandria, Virginia.

**BOUNDARY JUSTIFICATION**

The eastern boundary of the Uptown/Parker-Gray Historic District shares the line of the western boundary of the National Register-listed Alexandria Historic District and the boundary of the National Register-listed George Washington Parkway. The district comprises architecturally related resources of several different kinds, generally in a graded pattern, with the oldest resources in the district’s southeastern corner. The eastern and southern portions of the district contain a large number of architecturally similar townhouses from the late nineteenth century, mostly of frame construction but including some brick examples. These houses typify the local version of architectural trends of the time. They are stylistically similar to those in other contemporary parts of Alexandria. However, there is a change in character between the area within the proposed boundary and adjoining areas found in the previously listed districts to the southeast: the houses within the currently proposed boundary are much often of wood construction and stylistically simpler than those east and south of the boundary. Beyond the core area in the southeastern blocks of the district, there is some gradation of related styles extending to the west, with some of the district’s youngest historic resources, long rows of brick houses, appearing in the two or three blocks closest to the district’s western boundary. In the northern half of the district, although there are some small individually built townhouses, most of the buildings are commercial buildings and public housing units, both of which came into being as a result of trends that relate to the district as a whole and are reflective of its areas of significance. At the western and northern boundaries, there is a sharp change in character due to physical barriers (the raised railroad tracks), newer development projects, highway-related activities, and the appearance of distinctly different neighborhoods of a more-recent vintage.
