**NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

historic name WESTOVER HISTORIC DISTRICT
other names/site number (VDHR FILE NUMBER 000-0032)

2. Location

street & number Bounded by McKinley Road, N. Washington Boulevard, N. 16th St., N. Jefferson St., N. 11th St., and N. Fairfax Drive
city or town not for publication vicinity _____
state Virginia code VA county Arlington County code 013 zip code 22205

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property meets does not meet the National Register Criteria. I recommend that this property be considered significant nationally statewide locally. (See continuation sheet for additional comments.)

[Signature] _____ Date 3/2/60.

Virginia Department of Historic Resources
State or Federal Agency or Tribal government

In my opinion, the property meets does not meet the National Register criteria. (See continuation sheet for additional comments.)

Signature of commenting official/Title _____ Date _____

State or Federal agency and bureau _____

4. National Park Service Certification

I, hereby certify that this property is:

- entered in the National Register
 See continuation sheet.
- determined eligible for the National Register
 See continuation sheet.
- determined not eligible for the National Register
- removed from the National Register
- other (explain): _____

Signature of the Keeper _____

Date of Action _____

8. Statement of Significance

Applicable National Register Criteria (Mark "X" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance (Enter categories from instructions)

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 7 Page 1

SUMMARY DESCRIPTION

Located in northwestern Arlington County, Virginia, the Westover Historic District is a residential neighborhood of 418 primary resources on 143.363 acres. The neighborhood was constructed in five phases: Westover Apartments (1939), Westover Hills (1940-1941), Keene's Addition to Westover (1941), Westover Park (1942, 1943, 1947, 1948), and Mason's Addition to Westover (1955-1957). It is bounded by 18th Street North and North Longfellow Street on the north, North Jefferson Street on the east, Interstate 66 (I-66) on the south, and McKinley Road on the west. The residential streets of Westover are lined with Colonial Revival-style single-family dwellings, twin houses, duplexes, and multi-family garden apartments primarily constructed by Mace Properties, Inc. with mortgages insured by the Federal Housing Administration (FHA). The buildings are sited away from the streets to provide for ample yards and many of the houses have paved driveways to provide for off-street parking. Rolling hills and clusters of woodland define the neighborhood, which is interspersed with winding streets and cul-de-sacs. The commercial district, centered along North Washington Boulevard and Patrick Henry Drive, contains a shopping center, the Claude A. Swanson Junior High School, and the Westover Baptist Church. Swanson Park, located along the southwest border of the school site, connects the school grounds and the neighborhood with pedestrian paths. A planned park is located in the southern section of the neighborhood and is presently known as Westover Park.

DETAILED DESCRIPTION

Architectural Style

The majority of the buildings constructed in Westover by Mace Properties and subsequent developers consist of two-story brick edifices designed in the Colonial Revival style. Although an architectural style of choice was not specifically stated in the Federal Housing Administration's (FHA) minimum requirements for new subdivisions or its highly influential standards, the preferred style for garden-apartment complexes of the 1930s and 1940s, as well as for freestanding single-family dwellings, was the Colonial Revival style. The first large-scale garden-apartment complex, Colonial Village in Arlington, Virginia, (1935, 1939, 1954-1955) prominently illustrated the

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 7 Page 2

Colonial Revival style and served as a model for other FHA-insured projects. As a result, it is likely that other FHA projects were influenced by the success and therefore the style of Colonial Village.

Following the Centennial celebrations of 1876 in Philadelphia, the Colonial Revival style emerged as a contemporary architecture, fulfilling the nostalgia of the romanticized Enlightenment values and the achievements of the era of the founding of the republic.¹ The style, which borrowed heavily from early American architecture, “quickly became the height of fashionable taste as the American public came to embrace rather than deny its national past.”² The Colonial Revival style thereafter enjoyed ongoing appeal, becoming a mainstay of housing design in America from its origins about 1880 through the post-World War II era.³ By the 1920s and 1930s, Colonial Revival was the “most important of the many revival styles that formed America’s huge new suburbs.”⁴ James C. Massey and Shirley Maxwell state in *House Styles in America* that “suburban streetscapes took on an increasingly sedate air. Blocks of unassuming Colonial Revival buildings filled pleasant neighborhoods where the houses seemed to share a comfortable family resemblance. Variety for the sake of variety had been replaced by a subtle and, to the millions of Americans who lived in such homes, deeply satisfying traditionalism.”⁵

The Colonial Revival characteristics of the dwellings in Westover were simplified like many of the examples constructed in Arlington County during the mid-twentieth century. The brick veneer buildings are symmetrical and roof types primarily consist of side-gabled examples, yet a number of the apartment buildings have flat roofs with low parapet walls. A small number of hipped-roof buildings are located in the Westover Historic District. Windows are mainly 6/6 double-hung sash. The main entrances to the buildings contain Colonial Revival-style door surrounds with varying details. The houses constructed by Mace Properties in Westover Park between 1947 and 1948 introduce slight modifications to the traditional all brick edifices constructed in Westover Hills. Despite the use of weatherboard siding on their second stories, these houses continue to demonstrate traditional Colonial Revival elements such as a slightly-overhanging second story and modest Colonial Revival-style wood door surrounds. Keene’s Addition to Westover also consists of two-story Colonial Revival-style garden-apartment buildings and single-family dwellings. Designed by Mims, Speake, and Co., these brick-faced edifices are in keeping with the style and form of the dwellings constructed by Mace Properties.

ARLINGTON COUNTY, VA**

Section number 7 Page 3

Garden Apartments

Westover Apartments

The first dwellings constructed in the Westover Historic District were the Westover Apartments, constructed by Mace Properties with architect Adolph Thelander. Built in 1939, these buildings are typical of garden-apartment complexes built under the auspices of the FHA. The group of apartments sits on a large triangular-shaped lot bounded by North Longfellow Street on the west, 16th Street North on the north, Patrick Henry Drive on the east, and Washington Boulevard on the south. The layout of the complex consists of five groups of buildings that create an undulating form. Three of the buildings are laid out independently and are sited vertically or horizontally to the street. Open space is created by the groups of buildings that contain courtyards with plantings, trees, and concrete paths, all characteristics of garden-apartment complexes from the second quarter of the twentieth century.

The Westover Apartment buildings are two stories high, sit on cinder-block foundations, and are constructed of steel framing with cinder-block walls faced in six-course American-bond brick. Apartment units occupy both stories and have individual exterior entrances. Fenestration consists of paired vinyl-sash replacement windows with header sills. The buildings are differentiated by roof types and architectural detail, thus providing variety to the rows of apartment buildings. Roof types include side gable roofs with asphalt shingles and flat parapeted roofs with metal coping. In some instances, a single opening, marked by a brick surround with a soldier entablature or a surround of brick quoins with a brick header and keystone lintel, leads to two flanking apartment-unit entrances. Additional apartment units are entered through doors on the front façades, which are sheltered by hipped or shed awnings clad in asphalt shingles. Each apartment unit also has a separate entrance on the rear of the building.

Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 7 Page 4

Westover Hills Apartments

Mace Properties also constructed garden apartments among the single dwellings in Westover Hills. These garden-apartment buildings are located on Parcel D and Parcel E and were designed by architect Harry E. Ormston. The garden-apartment buildings of Parcel D were constructed between 1940 and 1941 along Washington Boulevard and North Kenilworth Street. The group of thirteen buildings varies in size and details, but all of the buildings are two stories high over a raised basement, sit on cinder-block foundations, and are constructed of cinder block with six-course American-bond brick veneers. The buildings also have Colonial Revival-style door surrounds.

Seven of the buildings have flat roofs with metal coping and four of the buildings have side-gabled roofs clad in asphalt shingles.⁶ The fenestration pattern on the main elevations consist of a 6/6 double-hung window, two small 6/6 double-hung windows, and paired double-hung windows on the first and second stories. This pattern flanks the main entrance, which has a 9/9 or 6/6 double-hung window above on the second story. A three-course stretcher-bond brick beltcourse encircles the buildings and also serves as the lintels for the second-story windows. Buildings have exterior-end brick chimneys. The apartment buildings at 1100, 1101, and 1111 North Kenilworth Street are smaller and are five bays wide. The apartment buildings at 1100 and 1101 North Kenilworth Street have flat roofs and feature 6/6 and 9/9 double-hung windows with header and rowlock sills. However, the apartment building at 1111 Kenilworth Street differs from the surrounding apartment buildings with its hipped roof, overhanging eaves, stretcher-bond brick watertable, and stone panels located below the paired windows flanking the main entrance.

The apartment buildings in Parcel E are located on the cul-de-sac of North Lancaster Street, Washington Boulevard, and North Longfellow Street. Constructed in 1941, the buildings are similar to the nine-bay buildings in Parcel D. Five of the buildings have flat parapeted roofs with metal coping and two of the buildings have side gable roofs. Fenestration varies between 6/6 double-hung windows and 1/1 replacement sash windows with header sills. Colonial Revival-style door surrounds adorn the centered entrances.

Section number 7 Page 5

Westover Park Apartments

Garden apartments were constructed in Section One, Section Two, and Section Three of Westover Park in 1942 and 1943 by Mace Properties and were designed by architect Harry E. Ormston. The buildings are interspersed throughout the neighborhood along 10th Road North, 11th Street North, 11th Road North, North Kenilworth Street, North Kensington Street, North Kennebec Street, Washington Boulevard, and North Lancaster Street. These buildings are sited parallel to the street. All of the buildings were constructed on a cinder-block foundation, are two stories in height above a raised basement, have cinder-block walls faced in six-course American-bond brick, and have Colonial Revival-style door surrounds on their main entrances.

Section One of Westover Park contains twenty-one garden apartment buildings that were constructed in 1942. The buildings are two stories above a raised basement, have six-course American-bond brick veneers, and are nine bays wide. Six of the apartment buildings have flat roofs, while fifteen have side-gable roofs. The fenestration patterns on the main elevations are similar to Mace Properties's other garden apartments with 6/6 double-hung windows, two small 6/6 double-hung windows, and paired 6/6 double-hung windows on each story. This pattern flanks the centered main entrance. A single 6/6 double-hung window is located above the entrance on the second story. The openings have header sills and segmental-arched lintels. A stretcher-bond brick beltcourse surrounds each of the buildings. A number of the flat-roofed buildings exhibit brick quoins, including the apartment building at 5701 11th Street North. Small gabled dormers with louvered vents pierce the roofs of the side-gabled buildings. Each building has a Colonial Revival-style door surround. Five ten-family apartment buildings are located in Section Two of Westover Park along 11th Street North. These buildings are identical to the apartment buildings in Section One. Two have flat roofs and three have side gable roofs.

Eleven apartment buildings were constructed in Section Three of Westover Park in 1943. The eight-family apartment buildings are two stories above a raised basement, are nine bays wide, and have side-gabled roofs. Similar to Mace Properties's earlier apartments, the apartment buildings in Section Three have cinder-block walls with six-course American-bond brick veneers and cinder-block foundations. The fenestration pattern on the main elevation consists of double-hung windows, two smaller double-hung windows, and paired double-hung windows, which flank the main

Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 7 Page 6

entrance. The windows have heavy concrete lintels and header sills. Gabled dormers with louvered vents pierce the asphalt shingle roofs. The main entrances have Colonial Revival-style door surrounds, such as the paired pilaster surround with an entablature seen on the apartment building at 1009 North Kensington Street.

Keene's Addition to Westover

The ten garden apartment buildings in Keene's Addition to Westover, built by Redfern Company with architects Mims Speake and Company, are in keeping with the garden apartment building constructed by Mace Properties. The buildings are two stories high over a raised basement, nine bays wide, and two bays deep and have cinder-block foundations. They are constructed of cinder block faced in six-course American-bond brick and are adorned with brick quoins and stretcher brick beltcourses. Roof types vary and include four hipped roof buildings and six side-gabled roof buildings. A few of the buildings retain their original slate roofs, while a number of the roofs have been covered in asphalt shingles. The buildings have exterior side brick chimneys. Fenestration is comprised of 6/6 double-hung windows and smaller 6/6 double hung windows with segmental-arched lintels and rowlock sills, although most of the windows have been replaced with 1/1 windows with snap-in muntins. The centered entrances are ornamented with varied Colonial Revival-style door surrounds.

Semi-Detached Twin Houses and Duplexes

Semi-Detached Twin Houses

Semi-detached twin houses in Westover are located in Parcel D along the 5800 block of Washington Boulevard. Constructed in 1940 by Mace Properties, the seven buildings were designed by architect Harry E. Ormston. The two-story, three-bay buildings are constructed of cinder block with six-course Flemish-bond brick veneers and side-gabled roofs clad in asphalt shingles. Entrances to the two units are located on the center bay with flanking double-hung windows on the first and second stories. Openings have header brick sills. A plain wood cornice lines the front façade. The adornment of the entrances varies by building. The duplexes at 5830-5832 Washington Boulevard,

**United States Department of the Interior
National Park Service**

Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 7 Page 7

for example, share a Colonial Revival-style door surround with pilasters and a cornice. A pedimented door surround embellishes the entrance at 5822-5824 Washington Boulevard and a shed-roofed awning with filigree posts covers the entrance at 5818-5820 Washington Boulevard. The duplex at 5834-5836 Washington Boulevard deviates from the others with a hipped roof. Both of the duplexes on the end lots at 5834-5836 and 5810-5812 Washington Boulevard have porches on their side elevations. Entrances to 5810 and 5836 Washington Boulevard are located on these side elevations.

Duplexes

Mace Properties constructed duplexes in Westover Hills in 1941 that were designed by architect Harry E. Ormston. These two-story brick buildings are not grouped together, but are located along streets of single dwellings and apartments. The duplexes resemble single dwellings with one shared entrance on the front elevation. The dwellings are four bays wide and two bays deep with walls constructed of cinder block and seven-course American-bond brick. The 6/6 double-hung windows have thin-edged wood surrounds and header sills. A header beltcourse separates the first and second stories and a plain wood cornice lines the front facades. The opening for the main entrance is slightly recessed, displaying a segmental arch with a brick keystone and a square-edged door surround. Examples of this duplex type include 1145 North Kentucky Street, 1200 North Kennebec Street, and 1201 North Kenilworth Street.

Single-Family Dwellings

Westover Hills

The single dwellings constructed in Westover Hills by Mace Properties between 1940 and 1941 were designed by architects Adolf F. Thelander and Harry E. Ormston. The buildings are two stories high with walls constructed of cinder block faced in six-course Flemish-bond brick. All of the houses have cinder-block foundations, steel framing, concrete floors, and include a basement. The houses consist of two basic models including a side-gabled, five-room plan and a front-gabled, six-room plan. The original windows of the houses were double-hung wood sash, however, in many

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 7 Page 8

cases the original windows have been replaced with 1/1 double-hung vinyl sash. Similarly, the original roof sheathing was composition shingles and is now commonly replaced with asphalt shingles. Each house has an exterior-end brick chimney with a corbelled cap that is located on the gable end opposite of the entrance. The second story of the buildings is shorter in height than the first and therefore windows on the second story on the non-gabled elevations are smaller than the standard size windows on the first story and the gable ends. Windows on the first story have projecting header sills and a projecting header beltcourse separates the first and second stories. Second-story windows on the gabled ends have rowlock lintels. The houses have flat, wood cornices located under the slightly-overhanging eaves of the non-gabled elevations. The gable-end eaves are flush with a wood fascia board. Colonial Revival-style wood door surrounds vary per house, presenting a sunburst pediment, an unadorned, segmental-arched pediment, flush pilasters with a pediment, a surround with flush pilasters, or an unadorned entablature.

The five-room plan houses vary by orientation with the front gable or the side gable facing the street. The entrances to these houses are located on the non-gable end in the right or left bay. When the gable is facing the street, a wood-frame porch with a side-gabled roof is attached to the side elevation of the house, sheltering the main entrance that is located on the bay closest to the street. Many of the side-gabled models also have a side porch. Constructed of wood frame with a shed roof, these porches are flush to the front elevation of the house and shelter side entrances. In many instances, these porches have been enclosed or screened-in.

Six-room models are two bays wide and three bays deep. The gable end of the buildings is orientated to the street with the entrance on either the right or left bay of the gable end. A semi-circular opening with a louvered vent is located in the uppermost portion of the gable ends. Many of the houses have side porches flush to the front elevation of the house. In several instances, the porches, which have side-gable roofs, have been enclosed with siding or brick.

Westover Park

The fifty-three single dwellings in Sections Four, Five, and Six of Westover Park, constructed by Mace Properties in 1947 and 1948 and designed by architect A.S.J. Stephens, feature a larger plan with three bedrooms. These houses are identical and only differ by the location of the main entrance

Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 7 **Page** 9

on the front façade and the chimney that is located on the opposite gable-end of the entrance. Two stories high and two bays wide, the side-gabled houses sit on cinder-block foundations and are constructed of wood frame with stretcher-bond brick veneer on the first story and wood siding on the slightly overhanging second story. The roofs were originally clad in asbestos or asphalt shingles. Fenestration on the front façade consists of the main entrance with a flush or fluted wood door surround and a set of three 6/6 double-hung wood sash windows with a concrete sill. The second story displays a single 6/6 double-hung wood sash window above the entrance in addition to a pair of double-hung wood sash windows. The exterior-end chimneys are brick with a corbelled cap and a brick buttress. A flush wood cornice marks the first story.

A small number of houses located in Section Four differ from the basic model used throughout Sections Four, Five, and Six of Westover Park and line 11th Street North and North Jefferson Street between 11th Street North and 10th Street North. According to building permits, these houses are slightly larger than the other single dwellings constructed in Westover Hills: while all of the houses contain six rooms, this particular model has at least two bathrooms. The houses at 1001 North Jefferson Street and 5530 11th Street North are completely faced with stretcher-bond brick but do not display the slightly-overhanging second story like the other models. The house at 1021 North Jefferson Street, also completely faced in stretcher-bond brick, exhibits a hipped roof. Similar in size, the house at 5524 11th Street North has a second story originally clad in wood siding but later replaced with vinyl siding. The largest house of the group is at 5518 11th Street North, which was built with two-and-a-half bathrooms, is three bays wide with a central entrance, and has a hipped roof.

Keene's Addition to Westover

Keene's Addition to Westover, built by Redfern Company with architects Mims Speake and Company, contains sixty-two two-story single dwellings. The houses are constructed of wood framing with stretcher-bond brick veneers. They are three bays wide and are differentiated by side-gabled and hipped roofs, sheathed in slate shingles or with replacement asphalt shingles. Many of the houses are decorated with flat wood cornices. House types vary with all-brick veneers or a second story clad in weatherboard siding. Porches are located on the front elevation, sheltering the main entrance. Examples include one-bay wood porticos with gabled or half-hipped roofs and

Section number 7 Page 10

larger, wood porches with half-hipped roofs. Fenestration on the first stories consists of two openings: the main entrance and a small 6/6 double-hung window with a wood-paneled spandrel. The second stories contain three larger 6/6 double-hung windows. The windows have rowlock sills and louvered shutters. Side-gabled houses display exterior-end brick chimneys and hipped-roof houses have exterior rear brick chimneys.

Claude A. Swanson Junior High School

The Claude A. Swanson Junior High School at 5800 Washington Boulevard was built in 1939 in anticipation of the construction of Westover Apartments and Westover Hills. The school, designed by architect Raymond V. Long, was sited on a large lot bounded by North Washington Boulevard on the north and Patrick Henry Drive on the east. The 1939 section of the school is two-and-a-half stories high and sits on a cinder-block foundation with a brick water table. It is constructed of steel joists and cinder block faced in six-course Flemish-bond brick. The building is composed of a nine-bay main block with flanking three-bay wings. It has a side gable roof of slate shingles with a center gable. Four end chimneys of stretcher-bond brick with corbelled caps flank the main block of the building. Gabled dormers pierce the roof of the main block and a modillion cornice encircles the building. Fenestration is comprised of large multi-light windows that are ornamented with brick jack-arched lintels and keystones. The main entrance, located under the center gable, is marked by a large Palladian window on the second story and Colonial Revival-style door surround with fluted Tuscan columns. Several expansion projects have been undertaken to enlarge the school since its construction. The 1954 expansion added a gymnasium on the east elevation, a cafeteria to the south elevation, and additional classrooms to the west elevation. The gym and “miscellaneous buildings” were demolished in 1967 for the construction of a new gymnasium addition.⁷ A fire in 1977 destroyed the original cupola, which was never replaced.⁸ In 2004, a wing addition was constructed on the west portion of the north façade and is consistent with the style and massing of the original building. These additions do not compromise the integrity of the design and materials of the 1939 school.

Westover Shopping Center

The Westover Shopping Center at 5800 Washington Boulevard consists of nine shops. The stores at 5841-5853 Washington Boulevard, built in 1940, were the first modern stores to be constructed in Westover. According to a building permit dating from October of 1940, a larger store was constructed adjacent to 5841 Washington Boulevard at 5857 Washington Boulevard. These one-story buildings are constructed of six-course American-bond brick with concrete-paneled façades. The buildings have a shared flat roof with stepped parapet and metal coping and are ornamented with three horizontal strips of metal that run along the roofline and mark the entrances to the stores. Large plate glass store windows line the front facades and transom windows are located above the glass entrance doors. New standing-seam metal awnings cover the entrances to the stores and stretcher-bond brick facing has been added to the base of the façades, under the storefront windows.

The shopping center was enlarged in 1947 with the construction of 5861-5867 Washington Boulevard. These two buildings are constructed of cinder block faced in six-course American-bond brick on the side elevations and the front elevations are faced in concrete panels. The buildings share a flat parapeted roof with a scalloped cornice. The building at 5861 Washington Boulevard is twice the size of the adjacent building and was originally lined with large storefront windows that have been enclosed with rock-faced concrete. The buildings have been combined for use as a grocery store.

Westover Baptist Church

The Westover Baptist Church, located at 1125 Patrick Henry Drive, was constructed in three phases. The oldest section of the church was constructed in 1941-1942 on the northern section of the lot and is now known as the Mitchell Chapel. The chapel is one story high and five bays wide and is faced with six-course American-bond brick. It is capped by a pedimented, front gable roof sheathed in slate shingles. Lining the front elevation is a three-bay, recessed portico with square, Tuscan posts. Fenestration on the five-bay main elevation consists of 8/8 double-hung windows and nine-light fixed clerestory windows. A centered double-leaf doorway leads to the sanctuary and is adorned by a Colonial Revival-style door surround with fluted pilasters and a denticulated pediment. The

pediment contains a circular casement window. An education building, constructed in 1950, is attached to the western portion of the chapel's south elevation. This two-story building, faced in brick, is two stories high, has a flat roof with metal coping, and 8/8 double-hung windows.

The sanctuary currently used by the congregation was constructed between 1957 and 1958. The sanctuary is connected to the 1950 educational building by an office and an additional education building. Two stories high and three bays wide, the office building has a six-course American-bond brick veneer and a hipped roof of slate shingles. A modillion cornice adorns the building. Fenestration is comprised of 8/8 double-hung windows with wood window surrounds, jack-arched brick lintels, and concrete sills. The centered entrance has a Colonial Revival-style door surround with a denticulated cornice and a wood keystone. A two-story brick wing with a flat roof connects the office building to the main sanctuary.

The 1957-1958 sanctuary, also designed in the Colonial Revival style, is one story high and is constructed of steel framing and has a six-course American-bond brick veneer with brick quoins. The building has a front gable roof of slate shingles and is decorated with a denticulated cornice. A three-bay inset portico with Ionic columns lines the front elevation and shelters three entrances that are adorned with broken pediments containing a fleur-de-lys motif. A circular, multi-paned window is located above each entrance. The portico is adorned with modillions and a brick-faced pediment that contains a semi-circular window. A flat wood frieze encircles the building and on the front elevation it reads "Westover Baptist Church." The fenestration on the side elevations consist of 8/12 double-hung windows with jack-arched brick lintels and large multi-light arched windows with arched lintels and keystones. The sanctuary is capped with a four-sided steeple containing circular multi-paned windows on the tower. The lantern is ornamented with multi-light rounded-arched windows. The windows have pedimented surrounds with fluted pilasters and corner blocks.

Westover Park

Although the Swanson School grounds provided a recreational area, an additional park was set aside by Mace Properties on an undeveloped portion of Parcel D. The park is bounded by Fairfax Drive, North Kenilworth Street, 11th Street North, and North Kentucky Street and is now known as Westover Park (1001 North Kennebec Street). In 1947, an amended zoning law allowed for the

construction of a recreation shelter on the site.⁹ Today, the park remains as one of the primary recreational areas in the neighborhood. The park was recently renovated and it contains two pavilions, a basketball court, ball fields, and pedestrian paths. The Washington and Old Dominion Trail, which follows the path of the former railroad, is located south of the park and lines the southern boundary of the Westover Historic District.

Two stories high and two bays wide, this single dwelling sits on a concrete-block foundation and is constructed of wood framing with a stretcher-bond brick veneer. The second story is clad in vinyl siding. The house has a side gable roof of asphalt shingles and an exterior-end brick chimney. Fenestration is comprised of 6/6 double-hung wood windows and vinyl casement windows with louvered shutters. Windows on the first story have concrete sills and the door has a Colonial-Revival-style surround with flush pilasters. A one-story addition with side-gable roof is attached to the west elevation but does not compromise the integrity of the main block.

Primary Resource Information: Single Dwelling, Stories 2, Style: Colonial Revival, 1940

Measuring two stories in height and two bays in width, this single dwelling sits on a cinder-block foundation. Construction materials consist of steel framing and cinder block walls faced with six-course Flemish-bond brick. The house is capped with a front gable roof sheathed in asphalt shingles. Fenestration is comprised of 6/6 double-hung windows. Additional features include an exterior-end brick chimney, header sills, rowlock lintels, a header brick belt course, a flat wood cornice, and a Colonial Revival-style door surround with flush pilasters and a pediment. An enclosed porch is attached to the south elevation.

Primary Resource Information: Single Dwelling, Stories 2, Style: Colonial Revival, 1940

Two stories high and one bay wide, this single dwelling sits on a cinder-block foundation. Construction materials consist of steel framing and cinder block walls faced with six-course Flemish-bond brick. The house has a front gable roof sheathed in asphalt shingles. Fenestration is comprised of 4/4 double-hung windows. Additional features include header sills, a header brick belt course, a flat wood cornice, and rowlock lintels. A frame entrance vestibule is attached to the south elevation and a one-bay portico with a shed roof and wood posts is located on the north elevation. These additions do not compromise the integrity of the main block.

Primary Resource Information: **Single Dwelling, Stories 2, Style: Colonial Revival, ca 2004**

Two stories high and three bays wide, this single dwelling sits on a solid concrete foundation clad in plastic brick and is constructed of frame with aluminum siding. The house is capped with a side-gable roof with asphalt shingles. Fenestration consists of single and paired double-hung metal windows with 6/6 flat snap-in muntins and flush aluminum surrounds. The house has an exterior side chimney with a corbelled cap and a one-story, one-bay wood porch with a half-hip roof and Tuscan columns shelters the main entry. Additional features include corner boards and a boxed cornice with a wide, plain fascia. A one-story two-bay garage is attached to the house. The original Mace Properties house (on the site until 2004) was two stories high and two bays wide. It had a cinder-block foundation. It was constructed of steel framing with cinder block walls faced in 6-course Flemish-bond brick. It had a front gable roof sheathed in asphalt shingles. Fenestration consisted of 6/6 double-hung windows. The house had one exterior-end chimney. Additional features of the house included a header belt course, a flat wood cornice, rowlock lintels, and a portico with a half-hip roof and square columns. A one-story enclosed porch was located on the north elevation.

Primary Resource Information: Single Dwelling, Stories 2, Style: Colonial Revival, 1941

Two stories high and three bays wide, this single dwelling sits on a solid concrete-block foundation and has a stretcher-bond brick veneer. The house has a side gable roof sheathed in asphalt shingles, a flat wood cornice, and an exterior-side brick chimney. Fenestration is comprised of 6/6 double-hung windows with rowlock sills. A one-story, four-bay porch with square wood posts has been added to the front elevation and a two-story addition is attached to the east elevation. These additions and alterations compromise the integrity of the main block.

1945/2005

Westover Park is bounded by 11th Street North on the north, North Kennebec Street on the east, and I-66 and the Washington and Old Dominion Trail on the south. The western boundary is the eastern property lines of the houses lining the 1000 block of North Kentucky Street. The lot slopes southward and the southern boundary of the park is lined with mature trees. A paved parking lot is accessible from North Kennebec Street and is located near the intersection of North Kennebec Street and 10th Street North.

Primary Resource Information: **Single Dwelling, Stories 2, Style: Colonial Revival, 1941**

Two stories high and three bays wide, this single dwelling sits on a solid concrete-block foundation and has a stretcher-bond brick veneer. The house has a hipped roof of asphalt shingles, an exterior-side brick chimney, and a molded wood cornice. Fenestration is comprised of 6/6 and 8/8 double-hung windows with rowlock sills. An exterior side chimney, laid in stretcher-bond brick, pierces the asphalt shingle roof. The first story window features a wood-paneled spandrel. A one-story portico with Tuscan columns and a scalloped wood cornice covers the main entry. A two-story rear addition, constructed of brick on the first story and wood frame clad in vinyl siding on the second story, is attached to the rear of the house. The addition contains a one-bay garage. A porch is located on the south elevation. These additions and alterations compromise the integrity of the main block.

1504 North Kentucky Street 000-0032-0404

Primary Resource Information: **Single Dwelling, Stories 2, Style: Colonial Revival, 1941**

Two stories high and three bays wide, this single dwelling sits on a solid concrete-block foundation and has a stretcher-bond brick veneer. The house has a side gable roof sheathed in asphalt shingles. Fenestration is comprised of 1/1 double-hung wood windows. A front-gabled addition that features a portico with wood columns, two bay windows, and a side, one-bay garage has been constructed on the front elevation. This two-story, two-bay front gabled addition, built circa 2000, completely obscures the original façade and compromises the integrity of the main block.

The Westover Baptist Church was constructed in three phases. The oldest section of the church was constructed from 1941-1942 on the northern section of the lot and is now known as the Mitchell Chapel. The chapel is one story high and five bays wide and is faced with six-course American-bond brick. It is capped by a pedimented, front gable roof sheathed in slate shingles. Lining the front elevation is a three-bay, recessed portico with square, Tuscan posts. Fenestration on the five-bay main elevation consists of 8/8 double-hung windows and nine-light fixed clearstory windows. A

centered double-leaf doorway leads to the sanctuary and is adorned by a Colonial Revival-revival door surround with fluted pilasters and a dentilated pediment. The pediment contains a circular casement window. An education building was constructed in 1950 and is attached to the western portion of the chapel's south elevation. This two-story building faced in brick is two stories high has a flat roof with metal coping and 8/8 double-hung windows. The sanctuary currently used by the congregation was constructed between 1957 and 1958. This sanctuary is connected to the 1950 educational building by an office and an additional education building. Two-stories high and three-bays wide, the office has a six-course American-bond brick veneer and has a hipped roof of slate shingles. A modillion cornice adorns the building. Fenestration is comprised of 8/8 double-hung windows with wood windows surrounds, jack-arched brick lintels and concrete sills. The centered entrance has a Colonial Revival door surround with a dentil cornice and a wood keystone. A two-story brick wing with a flat roof connects the building to the main sanctuary.

The 1958 sanctuary, also designed in the Colonial Revival style, is one story high and is constructed of steel framing with a six-course American-bond brick veneer with brick quoining. The building has a front gable roof of slate shingles and is decorated with a dentilated cornice. A three-bay inset portico with Ionic columns lines the front elevation and shelters three main entrances which are adorned with broken pediments containing a fleur-de-lys motif. A circular, multi-paned window is located above each entrance. The portico is adorned with modillions and a brick-faced pediment which contains a semi-circular window. A flat wood frieze encircles the building and reads "Westover Baptist Church" on the front elevation. The fenestration on the side elevations consist of 8/12 double-hung windows with jack-arched brick lintels and large multi-light arched windows with arched lintels and keystones. The sanctuary is capped with a four-sided steeple with circular multi-paned windows on the tower. The lantern is ornamented with multi-light windows with semi-circular caps. The windows have pedimented surrounds with fluted pilasters and corner blocks.

Primary Resource Information: Single Dwelling, Stories 2, Style: Colonial Revival, 1940

Two stories high and three bays wide, this single dwelling sits on a solid concrete-block foundation and has a stretcher-bond brick veneer. The house has a side gable roof sheathed in asphalt shingles, a wood dentil cornice, and an exterior-side brick chimney. Fenestration is comprised of 6/6 and 8/8 double-hung windows with rowlock sills. The house features an entrance vestibule with single-leaf door, 15-light sidelights, and jalousie windows, rowlock sills, and a wood dentil cornice. A one-story, stretcher-bond brick addition circa 1980 is attached to the southeast elevation. These additions and alterations compromise the integrity of the main block.

8. Statement of Significance

STATEMENT OF SIGNIFICANCE

Westover is a residential subdivision that developed in Arlington County, Virginia between 1939 and 1948, at the height of suburban growth in the Washington metropolitan area. The neighborhood, constructed in five phases, is a significant example of the impact the New Deal programs had on residential construction across the country and in particular, Arlington County. The modest Colonial Revival-style houses, garden apartments, duplexes, and twin houses, sited along winding streets, were built by Mace Properties and E. Ray Keene. Overall, the buildings constructed in Westover are implicative of the design standards specified by the Federal Housing Administration (FHA), which was established under the National Housing Act (NHA) of 1934. In addition, the inclusion of commercial development and community facilities, which were restricted to major arteries, illustrates the emphasis the FHA placed on safe and livable neighborhoods. Mace Properties's initial developments, including Westover Apartments (1939) and Westover Hills (1940-1941), is also representative of new technologies in building construction with its use of Stran-Steel framing, concrete floors, and assembly-line building methods. At the time of its development, Westover appeal was promoted by an article in *The Washington Post* that stated: "Lifted by the modern magic of mass production, this rapidly forming abode for 500 happy families is emerging from acres of cool, green hillocks ringed by velvet woods."¹ Additions to Westover, including Keene's Addition to Westover (1941) and Westover Park (1942-1943, 1947-1948), are in keeping with the plan and architecture of Westover and further illustrate the rapid growth of residential suburbs in Arlington County during the New Deal era.

Located to the north of Interstate 66 along North Washington Boulevard, Westover contains single dwellings, multi-family garden apartments, twin houses, duplexes, a shopping center, a church, a school, and a park. The district meets National Register Criteria A and C, and is significant under the themes of community planning/development and architecture with the period of significance ranging from 1939 to 1948. The Westover Historic District is being nominated under the Multiple Property Nominations, *Garden Apartments, Apartment Houses and Apartment Complexes in Arlington*

Section number 8 Page 121

County, Virginia: 1934-1954 (EHT Tracerics, 2002) and *Historic Residential Suburbs in the United States, 1830-1960* (National Park Service, 2002). The neighborhood consists of 418 primary resources and 57 secondary resources. A total of 384 of the resources contribute to the Westover Historic District.

Criterion A: That are associated with events that have made a significant contribution to the broad patterns of our history.

Westover meets Criterion A of the National Register of Historic Places as a planned community directly influenced by both the dramatic increase of the federal workforce in Washington, D.C. and the need for affordable, quality housing. In turn, the architecture and planning of Westover, developed between 1939 and 1948, directly reflected the influence of the FHA's guidelines for small houses and residential neighborhood planning as well as the promotion of multi-family garden apartments by its Large-Scale Housing Division. Established under the National Housing Act of 1934, the FHA became the driving force for residential construction in the United States and especially in the suburban areas surrounding Washington, D.C. The FHA not only set guidelines for architectural design, but also for the overall plan of the neighborhood, which is evident throughout Westover. Its wooded landscape and rural-like atmosphere as well as its close proximity to downtown Washington, D.C. were emphasized along with its cost-effective price and construction quality. Westover was designed to be a self-sufficient neighborhood demonstrated by the construction of the Claude A. Swanson Middle School in 1939, the Westover Baptist Church in 1941, and the Westover Shopping Center in 1941. These public entities, constructed along the major arteries of Westover, demonstrate the importance of community planning in FHA subdivisions. As a result, with its affordable housing and convenient and appealing location, Westover quickly became home to the burgeoning population of Arlington County and its young war-time families.

Criterion C: That embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess

**United States Department of the Interior
National Park Service**

Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 8 Page 122

high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

The Westover Historic District meets Criterion C for its substantial number of single and multi-family dwellings that illustrate new construction methods developed for large-scale suburban housing in the mid-twentieth century and the influence of the FHA. The majority of the dwellings, constructed by Mace Properties between 1939 and 1948 with FHA-backed mortgages, demonstrate the use of assembly-line construction, popularized by the automobile industry, and the use of new building materials, such as steel and concrete. In particular, its promotion of “skyscraper construction” with the use of Stran-Steel framing, is uncommon among residential construction in Arlington County. The Westover Apartments (1939) and Westover Hills (1940-1941), consist of garden apartments, single dwellings and twin dwellings. These buildings are two stories high over a basement and exhibit concrete block foundations, steel framing and walls constructed of concrete block with a brick veneer. The multi-family garden apartments of Westover Apartments and Westover Hills reflect the guidelines promoted by the FHA’s Large Scale Housing Division and the success of the FHA-backed Colonial Village (1936), also located in Arlington County, Virginia. The single dwellings of Westover Hills were modeled from the FHA’s house designs published in *Principles of Planning Small Houses*.² The five- and six-room houses vary by their orientation to the street as well as by their Colonial Revival-style door surrounds. Construction in Westover Park, the third section subdivided by Mace Properties, consists of multi-family garden apartments constructed in 1942 and 1943, and single-family houses constructed between 1947 and 1948. Construction in Westover Park illustrates the shortage of steel during World War II (1941-1945) as building materials shifted from steel to wood frame and concrete block with a brick veneer. An addition to Westover, developed by E. Ray Keene in 1941, also contains single-family Colonial Revival-style houses that follow the typical five-room house plans promoted by the FHA.

Section number 8 Page 123

HISTORIC BACKGROUND

Arlington County

Arlington County is a twenty-six-square-mile community located in Northern Virginia along the Potomac River, across from Washington, D.C. The county is bounded by Fairfax County to the north and west, the City of Alexandria and Four Mile Run to the south, and the waters of the Potomac River to the east.

Arlington County remained predominantly rural through the eighteenth and nineteenth centuries with only insignificant changes in population. It was not until World War I (1914-1918) and the ensuing wide-spread growth in all government offices, which attracted employees from across the country to the Washington, D.C. area, that Arlington underwent any large-scale growth, and between 1910 and 1920 the population of the county grew by sixty percent. The influx of workers created a shortage of housing in Washington, D.C. and people began to look to the commuting suburbs. Arlington County, with its commuter streetcars and trains, was an ideal location for developments to house these workers. Between 1920 and 1930, Arlington County continued to grow at a steady pace, with the population increasing by forty percent within those ten years. To attract residents to the area, Arlington County government began a number of county-wide improvement projects. In 1923, construction began on the first county sewage system and, by 1930, the whole of the county had been designated a single sanitary district. By 1926, a county water system was underway.³

During the 1930s, county-wide improvements were made for public transportation. Buses transported county residents to and from Washington, D.C. and had replaced most of the streetcar railways. The importance of the automobile increased and new routes between Arlington County and the nation's capital began appearing. Memorial Bridge was constructed in 1932, and soon thereafter the George Washington Memorial Parkway was expanded and other major thoroughfares were constructed throughout the county.

The Great Depression (1929-1941), commonly marked by the stock market crash in October of 1929, created wide-spread unemployment throughout the United States. In an attempt to jump-start the economy and provide employment for all classes of Americans, the Roosevelt administration

created the New Deal programs, which more than doubled the number of available civilian jobs between 1930 and 1940. The Works Progress Administration (WPA), launched in 1935, created an enormous demand for professional and white-collar workers in Washington, D.C. Additionally, the Public Works Administration (PWA) needed a large number of construction and blue-collar workers.

Along with the government-sponsored work programs, the Federal Housing Administration (FHA) was created in 1934. Through this administration, the federal government provided insurance on long-term mortgage loans made by private lenders. A large portion of the FHA-insured loans were made for new residential subdivisions in the Washington, D.C. suburbs, especially in Arlington County. This ensured the continual development of subdivisions and the buying and selling of real estate in Arlington County.

Washington, D.C. was one of the cities hardest hit by the housing shortage during the early 1930s. Due to the rise in government workers supporting Roosevelt's New Deal agencies, the city's vacancy rate dropped from 12.5 percent in mid-1933 to 0.5 percent in 1934.⁴ Arlington County, with its new public water and sewer systems, and easy commute to and from Washington, D.C., was an attractive alternative to living in the city. Between 1930 and 1940, Arlington County doubled in size from 26,615 to 56,200 residents, illustrating that it was the fastest developing county in the Washington metropolitan area.⁵ At that time, forty-three percent of the total population of Arlington County worked for the United States government. The new population of Arlington in 1940 was young, eighty-five percent of the residents were under fifty years of age, and educated with twenty percent holding college degrees.⁶ As a result, Arlington County, with its convenient location near Washington, D.C. and its vast amount of open space, became a proving ground for FHA projects. Developers quickly took advantage of the housing situation and constructed housing for the lower-income bracket.

Development Prior to the Platting of Westover

Like most of northern Arlington County, the area that was to become Westover was agricultural in nature during the nineteenth and early twentieth centuries. In the mid-nineteenth century, the property was owned by Nicholas Febrey, a civic leader in Arlington and one of the largest landholders in the area. Febrey and his family moved into a house, inherited from his second wife's

father Robert Ball, located on the site of the present-day Claude A. Swanson Junior High School.⁷ The Washington and Ohio Railroad, part of the original Baltimore and Ohio Railroad established in the 1830s and renamed after a rebuilding effort in the 1870s, was located south of the Febrey property, along Four Mile Run.⁸ By the last decade of the nineteenth century, small communities began to develop along the newly-established electric railways that serviced the area as real estate operators began subdividing the land.⁹ One of these communities was Fostoria, developed by the Fostoria Land and Development Company in 1890, which took advantage of the Washington, Arlington, and Falls Church Electric Railway. The railroad provided passenger service from Rosslyn to East Falls Church and ran along Four Mile Run.¹⁰ By 1907, the neighborhood was known as Highland Park and the earliest houses constructed in the area are located within this community. Illustrating the construction growth in the area, the Walter Reed Elementary School was constructed in 1938 on McKinley Road, originally a section of Febrey farmland.

In 1938, when the Walter Reed Elementary School was constructed, the area now known as Westover was still largely undeveloped.¹¹ By that time, it was owned primarily by Ashton C. Jones and his wife, Margaret Rucker Jones. Persuaded by his brother-in-law, George H. Rucker, to work with his real estate company, Jones joined Rucker Realty. Rucker Realty, located in Arlington County, was incorporated in 1906 immediately after George H. Rucker arrived in Clarendon. Extremely active in the community through his entire life, Ashton Jones was engaged in a number of political, religious, financial, and social activities. He served as organizer and chairman of the board for the First Federal Savings and Loan Association and for the Clarendon Trust. Jones also served as deacon for the Baptist Church, president of the Arlington Chamber of Commerce, and was a member of Columbia Lodge, Clarendon Lodge, and Fraternal Americans of Alexandria. Jones continued his partnership with George H. Rucker & Company until his death in 1960.

Although Jones was a speculative developer, responsible for platting and improving Ashton Heights and Lee Heights, he did not participate in the platting of Westover. Instead, Jones deeded the land to the local development company, Mace Properties, Inc., which was owned by Miles A. Mace. In turn, Mace Properties developed the majority of the buildings located in the Westover Historic District between 1939 and 1948.

The Influence of the FHA and the Large-Scale Housing Division

Section number 8 Page 126

The FHA had an immense impact on large-scale housing construction and planning in the United States after its establishment in 1934. With the majority of buildings financed by FHA-approved mortgages, Westover is a model of the FHA's principles and its impact on residential communities. Emphasizing both community planning and architectural standards, the FHA set out to develop communities like Westover to improve the housing stock in the United States.

The FHA was not the first attempt to encourage home ownership and improvement. After World War I, architects, real estate developers, builders, social reformers, manufacturers, and public officials alike strove to promote the importance of domestic life. As a result, several movements developed with the main focus being home ownership, standardized building practices, and neighborhood improvement and planning.¹² One example is the Better Homes Movement, begun by the Better Homes in America, Inc. Founded in 1922, the Better Homes was a private organization founded by Marie Meloney, the editor of *The Delineator*, a Butterick Company publication. Approved by the newly-created Commerce Department, headed by then Secretary of Commerce Herbert Hoover, the Better Homes Movement created a nationwide network that involved the endorsement of twenty-eight state governors, national officials, and an advisory council of leaders from several national organizations such as the National Federation of Business and Professional Women's Clubs and the United States Chamber of Commerce.¹³ The organization sponsored a nationwide competition during an annual "Better Homes Week," which promoted community involvement as well as successful house designs. In turn, the program, which operated until 1942, greatly influenced small house designs and the preference for the Colonial Revival style.¹⁴

While the Better Homes Movement focused on female volunteerism for its promotion of housing reform, it often referred to the Architects' Small House Service Bureau for design authority. Established in Minneapolis in 1920, the Architects' Small House Service Bureau was sponsored by the American Institute of Architects and provided architect-designed mail-order plans and building specifications for small houses. The non-profit consisted of architects from across the country who took on the challenge of designing small homes, defined as no more than six rooms, without sacrificing variety and style. President Herbert Hoover also supported the Architects' Bureau with the hope that professional designs would "eliminate building waste, standardize house plans, and

Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 8 Page 127

lower construction costs,” further benefiting homeowners, architects, and builders.¹⁵ Designs were available in the periodical *The Small House* or in plan catalogues such as *Small Homes of Architectural Distinction* (1929). As a result, the bureau not only hoped to emphasize the value of professional design, but also encouraged the use of a professionally-trained architect to oversee building construction.¹⁶ The emphasis on quality-designed small houses inspired several publications including *Better Homes and Gardens* and *House and Garden*, which promoted home improvement, published house designs, and advertised new products for the home. Overall, influence of the bureau “resulted in a great diversity of architectural styles and types nationwide as regional forms and the work of regional architects attracted the interest of an increasingly educated audience of prospective home owners.”¹⁷ Although the bureau was successful during the building boom of the 1920s, it was greatly affected by the Great Depression. However, as residential development began to shift toward large-scale construction of the FHA, the designs of the Architects’ Small House Bureau continued to influence the designs of residential construction across the country.

The National Housing Act (NHA) was passed on June 27, 1934, creating the Federal Housing Administration and revolutionizing home financing. The goal of the FHA was to stimulate the building industry, improve housing conditions, and reestablish confidence in the nation’s lending institutions after the impact of the Depression by providing mortgage insurance for privately-financed mortgages. Mortgage rates and down payments were considerably low and subsequent amendments in 1938, 1941, and 1948 made the mortgages even more appealing with smaller down payments and long-term mortgages.

The FHA took advantage of its authority over project approval by promoting small, quality low-cost dwellings in self-contained communities. With these ideals, the FHA combined the ideals introduced by the Better Homes, Small House Bureau, and Garden City Movements to create a standard of housing and subdivision standards that would directly affect and regulate building practices during the mid-twentieth century. The FHA published house designs in its *Principles of Planning Small Houses* (1936), which were updated periodically. In addition, circulars published by the FHA including *Property Standards*, *Recent Developments in Building Construction*, and *Modern Housing*, provided information on prefabrication materials and methods, housing standards, and design principles.

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 8 Page 128

Five house plans, featuring Colonial Revival-style exteriors, were published in *Principles of Planning Small Houses* (1936) that became the standard models seen throughout FHA-insured neighborhoods. Although the plans varied by size, they all followed the same principles that eliminated unnecessary space, excessive ornamentation, and any detail that would add needless cost to the house. House Types C and D illustrated two-story designs that incorporated two bedrooms on the second floor. The largest of the designs was House Type E, which had three bedrooms on the second floor. New technologies were also promoted in the designs such as a modern kitchen and mechanical systems. The 1940 revision to *Principles of Planning Small Houses* added fireplaces and basements to the plans and called for the standardization of the mechanical and technical parts of the house including plumbing, pipes, closets, cabinets, and windows. To emphasize variety, the FHA promoted that houses of the same plan could be differentiated by using an assortment of materials, different roof types, entrances, and by the building's orientation to the street.¹⁸

The section of the FHA that had the most impact on multi-family housing was the Large-Scale Housing Division (subsequently known as the Rental Housing Division), established in January 1935 under Section 207 of the NHA. The Division's goal was to combat the housing shortage by promoting private investment in large-scale housing developments with the use of federally-backed loans. Under the leadership of Miles L. Colean, Deputy Administrator of the FHA and head of the Large-Scale Housing Division beginning in 1937, the division brought garden-apartment complexes to the forefront of multi-family housing and furthered the acceptance of the garden apartment as a versatile, affordable, and suitable housing type.¹⁹

The creation of the Large-Scale Housing Division indicated that the federal government "recognized the fact that many persons do not and, perhaps for sound economic reasons, should not attempt home ownership."²⁰ The Division was divided into real estate, architectural, engineering and construction, financial, and legal departments. With the coordination of these departments, the Division sought to establish the standards for large-scale housing as well as to analyze the submitted projects. Ultimately, the FHA stressed that the program was not based on government subsidy but

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 8 Page 129

on cooperation with “private enterprise and private capital” to construct such housing. The Division believed that “Only through private channels, it is generally agreed, can a solution be found for the problem of adequate housing for that vast number of families, dependant upon moderate wages and salaries, that are outside the scope of any subsidized housing program thus far proposed.”²¹

Community planning was an integral aspect of both the single-family and multi-family projects financed by the FHA. The FHA’s Land Planning Division created standards and design principles that could be applied to residential neighborhoods across the country as a way to “redirect the design of suburban America” and “for public officials and planners alike to abandon the rectilinear grid in favor of plans for curvilinear streets.”²² FHA-influenced plans not only promoted curvilinear streets, but also the use of cul-de-sacs, courts, and minor streets interlinked by collector streets. Moreover, the streets were arranged hierarchically allowing larger access roads to be located on the perimeter. As a result, the plans allowed for equally-sized house lots and “discouraged through traffic, eliminated dangerous four-way intersections, and offered an efficient arrangement of house lots, greatly reducing the cost of street construction and utilities.”²³ These standards set forth by Land Planning Division were in part influenced by the American garden city movement and successfully planned communities such as Radburn, New Jersey, and Sunnyside, New York, which stressed both planning and housing reform. In turn, the FHA used these innovative principles to influence the planning of its communities and the construction of garden-apartment complexes, thus changing the landscape of suburban America.

Mace Properties

Following the principles set forth by the FHA and responding to the need for affordable housing, Miles A. Mace developed several neighborhoods in Arlington County in the early twentieth century that provided affordable housing to the growing population. Mace, who lived in Arlington County, was a real estate broker.²⁴ He was only twenty-six years old when he played a role in developing the community of Over-Lee Knolls (adjacent to Westover to the northwest). Over-Lee Knolls was advertised in 1926 as “Virginia’s Ideal Suburb,” and emphasized low-cost housing as well as quality construction and fixtures.²⁵ In 1930, Mace constructed “Arlington County’s first modern apartment house,” on Garrison Road in Clarendon, Arlington County. The three-story stone building was

Section number 8 Page 130

designed by Arlington County architect Adolph F. Thelander.²⁶ Mace joined forces with Thelander in 1937 and established Mace Properties, Inc. with Thelander serving as the vice president.²⁷ Mace went on to develop several residential communities in Arlington County, financed by the FHA. These communities, including GlebeWood Village (1937, 1938), Westmont (1939), Westover (1939-1940), and the Highlands (1940), allowed Mace to offer housing at a lower cost and to build houses in larger quantities. Mace experimented with different types of housing in each community, yet each type emphasized affordability. In GlebeWood Village, for example, Mace constructed rowhouses whereas in Westmont and in the Highlands, he built semi-detached duplexes. Mace Properties was considered a “civic-minded pioneer” because of its high construction standards and low building costs. Mace’s houses were hailed for their individuality and their structural quality, attributes typically associated with higher-cost neighborhoods.²⁸

The Development of Westover

Westover Apartments and Westover Hills

In October of 1938, Arlington County approved the rezoning of the 120-acre site owned by Ashton and Margaret Jones to allow Mace Properties to construct multi-family apartment buildings.²⁹ By April of 1939, Mace Properties announced that it received FHA approval for low-cost multi-family rental housing. Section One was platted in July of 1939 with Washington Boulevard, historically known as Memorial Drive, as its southern boundary. The first apartment building constructed consisted of garden apartments with 152 units for the total cost of \$600,000. The entire apartment complex was reported to contain approximately 2,000 units at the cost of \$7,000,000.³⁰ Residents could either rent by the room or rent a “complete, modern five room and bath apartment.”³¹

Less than a year later, in 1940, FHA-backed Westover Hills was announced. With its plans for more than 500 “modern” single-family detached brick houses for less than \$5,000 or “a dollar per day,” Westover Hills was hailed as the “most ambitious building program in Mace Properties’ [sic] history.”³² The dwellings, including single-family houses, twin houses, and garden apartments, were designed by Thelander and Washington, D.C. architect Harry E. Ormston.

Construction of the single dwellings in Westover Hills began in May of 1940 with the platting of Parcel B, which contained sixty-four lots.³³ Mace sensed the “changing trend” and decided to

Continuation Sheet**

**WESTOVER HISTORIC DISTRICT (000-0032)
ARLINGTON COUNTY, VA**

Section number 8 Page 131

“launch into the detached-house field when he started Westover Hills.”³⁴ Parcel C was subsequently platted in June of 1940. In August of 1940, Mace Properties had constructed a total of 150 free-standing single-family houses and platted Parcel D. Mace Properties also responded to the need for affordable multi-family housing and the success of its previous housing projects by constructing duplexes and garden apartments in Westover Hills. By September, the corporation had sold more than 120 houses in the span of a month.³⁵ The project was praised as the largest of its kind in the Washington metropolitan area.³⁶ Westover became a symbol of the fast-growing nature of Arlington County as “a good example of what Arlington County has to offer in residential advantages.”³⁷

Mace Properties implemented “Skyscraper Strength” into the construction of each house in Westover Hills. Advertisements emphasized the “Skyscraper Construction” and the “4,870 pounds of steel” for the “solid, sturdy, and enduring” houses of Westover Hills.³⁸ The use of steel beams “endowed the structures with prodigious strength, preclude shrinkage, warping, decay or ravages of termites.”³⁹

Like Mace Properties’s previous developments, the low cost of the houses were a result of the corporation’s mass-purchasing of building materials directly from the distributor as well as its “stream-lined belt-line principles characterized by the automotive industry.”⁴⁰ During the 1930s, many corporations were implementing mass-production techniques and mass production that was successfully demonstrated by automobile companies such as Ford and General Motors. The Lustron Corporation of Chicago, Illinois, and the Ferro Company of Cleveland, Ohio, are two examples of large corporations that combined steel construction with mass production to build affordable housing.⁴¹ However, while Lustron and Ferro constructed houses entirely of steel materials, Mace only used “Stran-Steel” for the buildings’ joists.⁴²

The Stran-Steel Corporation was established in 1933 and became a major manufacturer of steel for residential construction. In 1937, the Great Lakes Steel Corporation, a unit of the National Steel Organization, bought Stran-Steel and it became the Stran-Steel Division of the Great Lakes Steel Corporation.⁴³ Stran-Steel was hailed by architects and builders as an innovative building material that had previously only been used in skyscraper and commercial building construction. Compared to traditional wood framing, Stran-Steel framing was lightweight, strong, flexible, and termite proof and fireproof. Furthermore, a specially-designed, curved nailing groove allowed for exterior and

interior building materials to be nailed to each girder. As a result, Stran-Steel was acclaimed as a safer and more permanent building material than traditional wood framing.⁴⁴ Stran-Steel is most remembered for its model home, in collaboration with *Good Housekeeping* magazine, in the *Homes of Tomorrow* exhibit at the 1933 World's Fair in Chicago, and its manufacturing of the Quonset buildings for military housing during World War II.

A few examples of Stran-Steel houses and apartment buildings were constructed in the Washington metropolitan area. The first examples of Stran-Steel houses in Washington, D.C. were built in the suburbs of Spring Valley and Westerleigh by W.C. and A.N. Miller. Their exhibit house, called the Avoncrest, was opened in December of 1934.⁴⁵ Development continued throughout 1935 and consisted of over fifty houses.⁴⁶ In 1940, *The Washington Post* listed several local builders and architects in addition to Mace Properties, which utilized Stran-Steel construction. Examples include developer Edward R. Carr, who used Stran-Steel for the floor joists in six garden apartment buildings along Conduit Road, N.W. in Washington, D.C. and Frank Lyon in his development of apartment buildings and shopping centers in Arlington. These local builders embraced a "modern method of construction which embodies rigidity, non-shrinkage, fire safety" which resulted in "low insurance rate[s], low maintenance, and permanence."⁴⁷ This technique was used in the construction of Westover Apartments and the houses in Westover Hills. Furthering the life of the buildings and their quality, Mace combined a Stran-Steel frame with concrete floors, concrete-block foundations, and walls of concrete block with brick facing for the houses in Westover.

The onset of World War II in Europe brought steel construction to a halt as the supply of metal tightened for war use. As a result, prefabricated construction reverted to wood construction. Although Westover Hills was constructed during the early years of World War II, it was affected by material shortage and rising costs.⁴⁸ By November of 1940, Mace Properties announced that the prices of houses in Westover Hills would rise due to material costs.⁴⁹ Mace Properties stressed that "with the possibility of inflation and growing scarcity of building materials and labor due to the demands of the Government for the defense program, continued higher building costs seem inevitable."⁵⁰ It is also highly probable that the steel shortage caused Mace Properties to revert back to traditional building materials; building permits for the first houses in Westover specifically listed Stran-Steel as the material for the first-floor joists while the apartment buildings and duplexes constructed after 1941 do not.

In addition to mass-production methods, Mace Properties also brought building costs down by subdividing a majority of Westover Hills in the same year instead of developing small portions of an area in separate building campaigns. As a result, costs were lower for overall labor costs, landscaping, and utility installation. The lower costs also allowed Mace Properties to finance “real community planning including diversified exterior architecture, coordinated traffic layouts, establishment of commercial and social centers, and in some cases recreational fields.”⁵¹ As a result, Westover demonstrated how “volume construction, coupled with intelligent planning and designing, can bring to those in modest income brackets an equivalent in space and living conveniences to quarters costing nearly twice as much in rented properties.”⁵² Mace said of his building techniques:

One of the points with which the home buyer of today should be most concerned is with regard to the condition of his property 20 or 30 years hence. What a tragedy it would be if, after a family has made the required monthly payments over a period, say of 25 years, and just as it felt that it could settle back and enjoy the satisfaction of being in a home of its own . . . to find that the house has so deteriorated through the years as to be practically worthless.⁵³

Overall, Mace believed that since there were houses throughout the United States that were over one hundred years old, houses built today could be constructed with the same permanence. He believed that despite the low price of a house, it would still be expensive if it was not built with lasting materials. Mace said, “So we contend that our homes are low in price not only because they are priced within the range of modest family incomes, but also because they are so strongly built that they will remain sound and sturdy through generations.”⁵⁴

Two basic house plans were available in Westover including a five-room and a six-room model. The five-room model was similar to House Type D, while the six-room model was borrowed from both House Types D and E, published in *Principles of Planning Small Houses* in 1936. All of the houses were built over a basement for added space. The first floor consisted of a living room, dining room, and kitchen and the second floor offered a master bedroom, guest bedroom, and bath. The five-room model was 11,800 cubic feet compared to the six-room model that was 16,000 cubic feet and had a third bedroom.⁵⁵ Prices at this time for the five-room models were as low as \$5,000, or under the FHA’s mutual mortgage insurance plan, \$500 down and \$31 a month for twenty-five

ARLINGTON COUNTY, VA**

Section number 8 Page 134

years. The six-room model sold for \$5,890, or \$590 down and \$37.90 a month for twenty-five years. Mace Properties promoted the affordability of their houses by stating, “This means that after your initial payment you can buy your home on a basis comparable to rent for an extremely modest one-bedroom apartment.”⁵⁶ The price increase in 1941 raised the cost to \$32.50 a month for five-room models and \$38.50 a month for six-room models.⁵⁷ Repetition of the house plans was camouflaged by “a mixture of exterior effects, giving the appearance of Colonial styles.”⁵⁸ With its affordable cost and quality construction, Mace Properties promoted that “In every detail, the buildings have surpassed the minimum standards laid down by the Federal Housing Administration – they have, in other words, built homes that go far beyond the requirements of that Federal Agency for long term, fully amortized mortgage financing.”⁵⁹

The interiors and the mechanical aspects of the houses also reflected Mace’s emphasis on quality construction and value. The concrete floors were covered in oak parquet flooring, the stairway handrails were iron, and the pipes of the house were copper. The houses in Westover Hills also offered central air-conditioning, steel kitchen cabinets, and a “modern” gas range.⁶⁰ A model home at 1217 North Livingston Street, furnished by Hecht Company, was open to prospective buyers to entice them and to illustrate the ways the house and yard could be used. *The Washington Post* reported, “All in all, this thoroughly-modern, more than adequately furnished house, should be an inspiration to all budgeters starting housekeeping and to all who for years have been living in apartments, but yearning all the while to escape to the suburbs where they could have a house.”⁶¹

The landscape of Westover Hills was an additional aspect of the neighborhood that attracted residents to the area. Westover was sited on a plat of land that had rolling hills and wooded areas, which created “a feeling of real country.”⁶² The houses were sited on 50’ by 150’ lots and were set back from the street. Instead of conforming to the typical suburban planning of orientating the houses parallel to the street, the houses in Westover were oriented to the topography of the lot, “lending the greatest advantage for use of grounds and gardens.”⁶³ Following the principles of the FHA’s Land Planning Division, Westover’s plan consists of curvilinear streets with cul-de-sacs and “no traffic hazards or congested corners, affording safety for children.”⁶⁴

In January of 1941, Mace Properties announced that its building campaign over the last year accounted for approximately one-fifth of the houses built in Arlington County – a total of 1,747 one- and two-family units. The company also announced a new home-sale policy: Mace Properties would buy back any house from a purchaser who was unable to continue payment due to a loss of

Section number 8 Page 135

job or a transfer to another city. Mace proclaimed, “Fear must be banished from the minds of prospective buyers.” The policy was to diminish doubt from prospective home owners and provide security when purchasing a Mace property. This announcement coincided with the completion of 100 new houses in Westover.⁶⁵ Development continued in 1941, and by June, 180 of the houses were occupied.

In addition to the single-family houses of Westover Hills, Mace Properties also constructed two-family twin houses in 1940. This group of seven buildings located along Washington Boulevard provided alternative housing at a lower cost than a single-family house. With Mace’s previous success with twin dwellings in Westmont, the inclusion of similar dwellings in Westover illustrates Mace Properties’s commitment to building low-cost homes.

The last phase of construction in Westover Hills took place in 1941 after the subdivision of Parcel E in October.⁶⁶ At that time, Mace Properties constructed garden apartments on Parcel D and Parcel E. Instead of a traditional garden-apartment complex layout like Westover Apartments, these apartments were interspersed between sections of single-family houses, were sited parallel to the streets, and lacked the courtyards of traditional garden-apartment complexes. However, the design of the apartments – two stories with a single entrance – reflected the designs promoted by the FHA.

Westover Park

Development in Westover continued in 1942 when Mace Properties subdivided “Westover Park,” located south of Washington Boulevard. Although the property was owned by Arlington Homes Corporation, Mace Properties continued to serve as the builder. In Sections One and Two of Westover Park, Mace Properties constructed eight-unit garden apartments similar to the apartments constructed in Westover Hills. In 1943, Mace Properties constructed additional garden apartments after Section Three was platted along 10th Road North and North Kensington Street. When construction ended in 1943, Westover Park contained forty garden-apartment buildings.

Mace Properties constructed its last dwellings in Westover between 1947 and 1948 in Sections Four, Five, and Six of Westover Park. In these areas, located southeast of the original development, Mace constructed two-story single dwellings. Unlike the houses in Westover Hills, the houses in Westover Park did not display the same steel-frame construction. The six-room houses, constructed

of wood frame with brick veneer on the first story and wood siding on the second story, offered three bedrooms and one, two, or two-and-a-half bath models. Illustrating the increase in price from its original models, a three-bedroom, two-and-a-half-bath house in Westover Park sold for \$19,000 in 1948.⁶⁷

Additional Amenities

Mace Properties emphasized the importance of the surroundings and the planning of Westover:

...communal values, including elevation, healthfulness of atmosphere, sightlines of approach, residential character, freedom from commercial or industrial enrichment, [and] proximity to rapid and regular transportation, shopping centers, schools, recreational and entertainment facilities.⁶⁸

Consequently, Mace Properties followed the FHA's advocacy for community planning and set land aside for a shopping center, a church, and a park. The result was a self-sufficient community that attracted young families to Westover.

In anticipation of the new families moving into the area, plans for a new junior high school coincided with the initial plans for Westover Hills. With the construction of the new junior high school, the Commonwealth also hoped to relieve the over-crowded conditions in the nearby Washington and Lee High School (1925) which served as both the junior and senior high school. Knowing that being in proximity to schools was an important factor for families buying a new house, M.A. Mace stated:

Proper community planning and the fundamental selection of ground for a large subdivision call for careful consideration of school facilities in the connection with the whole scheme. Schools and the accessibility are important to every family, just as important as transportation, shopping facilities, and recreational areas.⁶⁹

Construction for the Claude A. Swanson Junior High School began in 1939 and was completed in January of 1940. The school was named for Claude A. Swanson (1862-1939), who served as a congressman, the governor of Virginia, a U.S. senator, and the secretary of the navy. The school's

location on a seven-acre site in the heart of quickly-developing Westover Hills illustrates its importance in the neighborhood. Hailed as “one of the finest in the state,” the school was designed by state architect Raymond V. Long and was constructed by Washington, D.C. builder E. A. Pessagno.⁷⁰ The original section of the Colonial Revival-style, fireproof building contained twelve classrooms, a gymnasium, auditorium, cafeteria, offices, library, clinic, and a book room.⁷¹ The school was later enlarged in 1954, 1967, and 2004 to accommodate the needs of the community and its students. At the time of its construction, the Swanson School was among several schools in the area that varied by grade level and denomination. These schools, including the nearby Walter Reed Elementary School (1938) and the Washington-Lee High School (1925), heightened the appeal of the neighborhood, especially to families with school-age children. Although the Thomas Jefferson Junior High School (South Walter Reed Drive and 7th Street South) was the first purpose-built junior high school in Virginia and was constructed a year before the Swanson Junior High School, it was subsequently demolished, making the Claude A. Swanson Junior High School the oldest junior high school in the commonwealth.⁷²

Shopping centers were also key components of FHA neighborhoods and were another example of the FHA’s emphasis on community planning. These neighborhood centers were encouraged by the FHA when sufficient shopping was not located nearby and were an important element in the success of a neighborhood. In “The Neighborhood Shopping Center in Washington, D.C., 1930-1941,” Richard Longstreth explains that although the FHA’s primary concern was housing, it also wanted to control private commercial development by implementing land-use policies “that restricted commercial outlets to a single-relatively small area.”⁷³ By retaining the remainder of the frontage lots for residential use, the FHA hoped that it would “leave little incentive for other parties to construct retail buildings nearby.”⁷⁴ As a result, at least thirteen shopping centers were constructed in conjunction with FHA-backed housing projects in the Washington, D.C. area, one being the Westover Shopping Center⁷⁵

In 1940, construction began on the Westover Shopping Center and provided its new residents with convenient places to shop. The stores were located on the north side of Washington Boulevard

between North McKinley Road and North Longfellow Street. Ashton Jones developed the property with builder/owner James R. Goesnell with six stores at 5841-5853 Washington Boulevard.⁷⁶ Later that year, Jones constructed a store at 5837 Washington Boulevard for the Sanitary Grocery

ARLINGTON COUNTY, VA**

Section number 8 Page 138

Company.⁷⁷ The entire shopping center allowed for 200 parking spaces, with a large parking lot located behind the store and minimal on-street diagonal parking. In 1945, a post office was built adjacent to the stores at 5857 Washington Boulevard. The row of stores was enlarged again in 1947 with the construction of the stores at 5861-5867 Washington Boulevard.⁷⁸ In 1950, a new post office and two adjacent stores were constructed at 5873-5877 Washington Boulevard and the former post office was converted for commercial space (now demolished). The Westover Shopping Center provided residents with a variety of stores including a grocery store, drugstore, beauty shop, barber shop, dry cleaners, and a five-and-dime store, all located in the commercial buildings at 5839-5853 Washington Boulevard. The additional stores constructed at 5863-5867 Washington Boulevard housed the Federal Super Market (5863 Washington Boulevard) and a woman's clothing store (5867 Washington Boulevard). In the 1950s, the two stores adjacent to the post office included a bakery and a shoe store, which later became a pizza restaurant.⁷⁹ Similar businesses remain in the Westover Shopping Center today.

Despite FHA's efforts to prevent strip retail development beyond the neighborhood center, in many instances outside developers constructed additional retail buildings in close proximity to the existing shopping centers. The developers' strategy was based on the idea that new businesses would benefit from the established commercial businesses. For example, a block of stores were built directly across the street from the Colonial Village Shopping Center soon after its construction.⁸⁰ The same occurrence took place in Westover when a second group of stores was constructed adjacent to the Westover Shopping Center at 5900-5908 Washington Boulevard in 1941 and across the street at 5866-5880 Washington Boulevard in 1950.

With educational and commercial establishments in place, Westover fulfilled its religious needs when a Baptist congregation was organized in Westover by Reverend Perry L. Mitchell in June of 1940. Mitchell had recently resigned from the Clarendon Baptist Church in order to establish the new congregation in quickly-developing Westover Hills.⁸¹ Mitchell purchased a site for the church that was adjacent to the new Claude A. Swanson Junior High School and in close proximity to the Westover Shopping Center. Construction began in May of 1941 and the congregation met at the school until its completion.⁸² Architect E. Burton Corning designed the \$70,000 building, which consisted of a chapel and Sunday school rooms. During the first year, the congregation grew from seventy members to 210 and the Sunday school's attendance rose from eighty-nine to 310 students.⁸³ The church was completed in 1942. The church expanded with the addition of a new Sunday school

building, erected in 1950.⁸⁴ In 1958, Westover Baptist constructed a \$750,000 sanctuary that seated 1,250 persons – the largest in Arlington at that time. The building also included additional Sunday school rooms and a social hall that seated 500 persons.⁸⁵

Additions to Westover

Additions were made to Westover in 1940, 1941, 1942, and 1956. The first additions were made by developer Elwood Ray Keene, known as E. Ray Keene, and his company, Redfern Company, Inc. According to the Washington, D.C. city directories, Keene was an engineer and later a building contractor and real estate developer.⁸⁶ Keene lived in the city with his wife, Madge Redfern Keene, until the late 1940s. One of Keene's projects includes the 1930s development of the Ashton Heights suburb in Arlington, Virginia, along with developer George H. Rucker and Ashton Jones.⁸⁷

In November of 1940, Keene developed Section One, which consisted of eleven lots along Patrick Henry Drive. Section Two extended to the north with fifty lots. The expansion created a U-shaped addition along North Kenilworth Street, 15th Road North, and North Kentucky Street. Thirteen additional lots were platted in May of 1941 along the south side of 15th Street North in what was part of "Section Two – E. Ray Keene's Addition to Westover."⁸⁸ Keene started construction in 1941 in Section One and Two with forty-six single dwellings. The southern half of Section Two, along Washington Boulevard, was platted in July of 1942 with seven large lots where Keene constructed seven eight-family garden apartments. Keene constructed three additional garden-apartment buildings in Parcel B, which is created by the intersection of North Kenilworth Street and Washington Boulevard. The single dwellings and garden apartments were designed by the local architectural firm Mims, Speake & Company, known for its design for the Rappahannock National Bank Office Building in Washington, Virginia (1914).⁸⁹ Architect James Raymond Mims went on to design Al's Motors at 3910 Wilson Boulevard (ca. 1948) and also collaborated with local developer Broyhill & Sons for Broyhill's Addition to the Arlington Forest subdivision (1948).⁹⁰ Although it is unknown if Keene used FHA-backed mortgages, the Colonial Revival-style dwellings are similar in

style and form to those constructed by Mace Properties in Westover.

Section number 8 Page 140

Two final developments were added to Westover in the 1950s. An apartment building was constructed north of the Westover Apartments in 1953 by the owners and builders, the Luria Brothers, at 5760-5778 16th Street North. Mason's Addition to Westover was platted in July of 1956 by local developer Zane S. Mason. This section of Westover created a cul-de-sac of North Lancaster Street off of 14th Street North and contained six lots. One-story ranch houses and split-level houses were constructed on the lots in 1956 and 1957.

Architects

Raymond V. Long, a Richmond architect, served as the state supervisor of trade and industrial education in 1924. Between 1923 and 1937, Long worked for the State Board of Education in Virginia. In this capacity, he designed a large number of public schools for the commonwealth. His projects in Arlington County include the Walter Reed Elementary School at 1644 McKinley Road (1938), and the Claude A. Swanson Junior High School at 5800 Washington Boulevard (1939).

Harry E. Ormston, born in 1908, studied at the Cranbrook Academy of Art in Bloomfield Hills, Michigan. After he completed his studies in 1934, Ormston went on to design public buildings for the federal government (1935-1937), and was a partner in the Washington, D.C. firm of Horace R. Poeter & Harry E. Ormston (1937-1938). Ormston was an architect for Mace Properties between 1939 and 1942. He later worked for the U.S. Public Housing Authority (1942-1943) before establishing his own firm in 1945 in McLean, Virginia.⁹¹ He remained in practice until the 1980s.⁹²

Mims, Speake and Company was an architectural and contracting firm established in Luray, Virginia, by James Raymond Mims and Cecil A. Speake in the 1910s. Mims was born in Luray, Virginia, in 1888 and served as architect for the company. Mims's brother-in-law was Cecil A. Speake, who served as the general contractor for the business. Mims relocated to Arlington in 1938 and established his office at 2420 Wilson Boulevard.⁹³ During this time, Mims designed the Art Deco Seventh-Day Adventist Church in Takoma Park, Maryland, (1944) and Al's Motors in 3910 Wilson Boulevard (1948).⁹⁴ Mims, Speake and Company was hired by E. Ray Keene and Redfern Company to design the apartment buildings and single-family houses in Westover in 1941 and 1942. **Albert Sidney Johntson Stephens, Jr.**, was a registered Washington, D.C. architect during the 1940s. He attended the Virginia Mechanics Institute in Richmond from 1931 to 1932, the Virginia

Polytechnic Institute from 1932 to 1933, and the George Washington University in 1943.⁹⁵ Stephens was hired by Mace Properties to construct the last houses constructed in Westover Park between 1947 and 1948.

Adolph F. Thelander, born in 1900, started his architectural practice in Arlington County in 1930 and had an office in Clarendon. His early projects include the Arlington Presbyterian Church at 3507 Columbia Pike (1930) and the addition and alterations to the Army and Navy Country Club, Arlington (1932). Thelander was also involved in several residential developments in Arlington County including Country Club Hills (1929), where he also lived, Rock Creek Hills (1938), and Aurora Hills (1939).⁹⁶ According to *The Virginia Architects, 1835-1955: A Biographical Dictionary*, Thelander was active as an architect from 1930 to 1940, which may explain the absence of his name on building permits for Westover Park.⁹⁷ City directories show that in 1942 Thelander's wife Edna was living alone in Washington, D.C. suggesting that Thelander may have died between 1940 and 1942.

Westover Today

Today, Westover remains a residential suburban community and its overall character remains predominately unchanged. Modern construction in the neighborhood has been limited to the enlarging of community facilities, such as the Claude A. Swanson School, and to the neighborhood's edge with the construction of a new U.S. Post Office adjacent to the Westover Shopping Center. The shopping center continues to provide similar businesses to the community. Two additional shopping centers adjacent to the Westover Shopping Center along Washington Boulevard are located outside the boundaries of Westover. Like those in most suburban neighborhoods, the dwellings in Westover have been adapted to fit modern-day needs and growing families. In many instances, porches have been enclosed and/or enlarged for additional bathrooms. These additions mimic the original massing of the side porches. Supplementary space has been met by the construction of modest rear additions. Despite the ever-popular trend in Arlington of razing a historic house and constructing a larger dwelling on the same lot, Westover remains remarkably intact with only a single example of a late-twentieth-century "replacement."

Verbal Boundary Description

Westover is located at the western edge of Arlington County, Virginia, near the intersection of North Washington Boulevard and Patrick Henry Drive and the intersection of Patrick Henry Drive and Interstate 66. The northern boundary of the district begins at the north property line of 6367 Washington Boulevard continuing east along the north property lines of those buildings facing south on Washington Boulevard. It continues east to include the apartment building facing south on 16th Road North and the apartment building facing northwest on 16th Road North. The line extends east past Patrick Henry Drive along the north property lines of the houses facing south along 15th Road North. The eastern property line includes the buildings facing west on North Kenilworth Street and North Kensington Street until the intersection of North Kensington Street and 11th Street North. Here the boundary extends eastward to include the buildings facing north on 11th Street North until the northeast property line at 5512 11th Street North. At this point, the eastern boundary of the district follows the eastern property lines of 5512 11th Street North, 5511 and 5514 10th Street North. At the southeast corner of the property line at 5514 10th Street North, the boundary line extends southeast to the eastern property line of 5501 Fairfax Drive. Interstate 66 serves as the southern boundary of the district. The western boundary is the eastern property lines of the houses that face west on McKinley Road and exclude these buildings. Washington Boulevard and its intersection of Patrick Henry Drive serve as the commercial district of the neighborhood.

Section number 10 Page 152

Boundary Justification

The Westover Historic District boundaries follow the perimeters of Westover Hills and Westover Park subdivisions, originally platted by Mace Properties, Inc. between 1939 and 1949 and also include E. Ray Keene's Addition to Westover (1941) and Mason's Addition to Westover (1955). These subdivisions function cohesively as the Westover neighborhood.
