Describe the present and original (if known) physical appearance

Summary Description

The Lower Basin Historic District defines a commercial and industrial warehouse area in the city of Lynchburg located between the downtown commercial area to the south and the James River waterfront to the north. Encompassing buildings facing the 700-1300 blocks of Jefferson Street, the 600-1300 blocks of Commerce Street, and most of the 1200-1300 blocks of Main Street, the district contains a variety of mostly late 19th- and early 20th-century, multi-story, brick warehouses and factories, two-to-three-story brick commercial buildings, and a number of structures associated with the James River and Kanawha Canal and the Norfolk and Western and Chesapeake and Ohio Railways. Taking its name from a wide basin of the canal that once extended between Ninth Street and Horseford Road, the Lower Basin Historic District contains 60 contributing buildings, 2 contributing structures—a viaduct and a stone bridge, 1 contributing object—a monument commemorating the site of 18th-century Lynch's Ferry, 12 noncontributing buildings, and 12 noncontributing structures—modern grain silos that detract from the historic character of the district.

Architectural Analysis

The majority of buildings in the Lower Basin Historic District are late 19th- and early 20th- century commercial buildings. Although the waterfront area has always remained a center of commercial and mercantile activity even before Lynchburg's founding in 1786, no buildings from the 18th and early 19th centuries remain in the area today. Sketches and paintings of the period show panoramic views of Lynchburg's waterfront in which long tobacco warehouses, mills, a covered bridge spanning the James River, and by the mid-19th century, a railroad depot and roundhouse clearly indicating the importance of the area to the city's commercial economy.

The oldest surviving structure in the area is a stone arched bridge that carries Ninth Street across the now-filled James River and Kanawha Canal. The canal once paralleled Jefferson Street and the river and an expanded portion between Ninth Street and Horseford Road was known as the Lower Basin. Lynchburg's major extant remnant of the canal, the sturdy Ninth Street Bridge, is still used for vehicular traffic. A stone panel above the keystone of the arch is proudly inscribed "Built A.D. 1839 by J. S. King."

Near the Ninth Street Bridge is a fine example of Greek Revival commercial architecture. The J. W. Wood Building at 23-27 Ninth Street, one of Lynchburg's few surviving antebellum buildings, was listed on the National Register in 1983. The ca. 1853 building is a three-story, hip-roofed, brick building of refined classical lines and a little altered cast-iron storefront. Another commercial building that appears to date from the mid-19th century is the two-story, gable-roofed brick building at 1208 Main Street. Although it has undergone late 19th- and 20th- century storefront alterations, the building still retains its original Greek Revival character, especially as noted in its fenestration pattern and details.

At the opposite (eastern) end of Jefferson Street stands a complex of three buildings and twelve modern grain elevators comprising the Piedmont Flour Mills. The largest commercial structure of its time, the ca. 1875, 4½-story brick main structure replaced an earlier mill on the site. Although utilitarian in design, the building nonetheless

Statement of Significance (in one paragraph)

Statement of Significance

The Lower Basin Historic District, located primarily along Lynchburg's James River waterfront, defines the city's major 18th, 19th, and early 20th-century commercial and mercantile center. Beginning as Lynch's Ferry in the 1750s and emerging as an important canal and railroad transportation center during the mid-19th century, Lynchburg maintained its role as a leading manufacturing and marketing center for much of the Piedmont region until well into the 20th century. The Lower Basin area takes its name from an expanded portion of the James River and Kanawha Canal which linked the city to eastern markets after 1840. Canal traffic and the arrival of the Virginia and Tennessee Railroad to Lynchburg in 1849 resulted in increased commercial activity in the Lower Basin. This activity reached its zenith during the early 20th century with most of the district's commercial warehouses, factories, and jobbing houses dating from the 1890s and early 1900s. Rows of multi-story, utilitarian brick structures present a compact and cohesive display of period commercial architecture, noteworthy more for building numbers, size, and construction than for stylistic features; nevertheless, traces of Italianate, Romanesque Revival, Neoclassical, and Italian Renaissance styles are seen in the sturdy facades that line Jefferson and Commerce streets.

Historical Background

Lynch's Ferry, the Lower Basin, and the Waterfront are all names that have been given over the years to the area that extends along the banks of the James River from about Sixth Street down to Horseford Road, and inland to Commerce Street. This relatively small area is literally the birthplace of Lynchburg, for although it lay outside the original town boundaries established in 1786, John Lynch had established his ferry there as early as 1757. Before then, there was an Indian crossing nearby, and the lowlands where Blackwater Creek flows into the James River provided natural camping sites. In the mid-18th century, the site became the port for the not-far-distant town of New London, and the Ferry House provided food and lodging to travelers and merchants. Thomas Jefferson noted that lead from the mines in the western part of Virginia was shipped from Lynch's Ferry to the eastern arsenals during the Revolution. As tobacco production increased in the Piedmont, Lynch's Ferry was crowded with bateaux. These ingenious boats, invented by Anthony Rucker of Amherst County, were especially effective in navigating the shallow waters of the James River downstream to Richmond. The primary cargo they hauled was tobacco, packed in hogsheads for the domestic and foreign market. Prior to its shipment, however, tobacco had to be inspected, and for this purpose John Lynch established Lynch's Warehouse in 1785. One of the first official tobacco inspection stations above Tidewater, the warehouse stood on the corner of present-day Commerce and Eighth streets until it was demolished in 1978. Lynch's was joined by other warehouses, and shops and stores soon filled the spaces in between. These commercial establishments stocked goods needed by settlers emigrating to the west from Lynch's Ferry.

Section number 7 Page 7.17. DESCRIPTION -- Architectural Analysis

features such decorative details as full-height brick pilasters, a corbeled brick cornice, and segmental-arched openings. A double row of gabled dormers is also an unusual feature. Around 1880, a six-story corn mill, now clad in corrugated metal, was built opposite the main mill across Jefferson Street, and in 1912 an engine room was built east of the main mill. Piedmont Mills, Inc. has undergone several interior alterations and expansions, but it is still in operation today.

Two railroad freight depots in the district date from the 1880s and 1890s. The Norfolk and Western Railway depot stands on the north side of the 900-1000 blocks of Jefferson Street. Built ca. 1885, it is a one-story gable-roofed brick building that extends over 400 feet in length. Besides an arcade of recessed segmental-arched bays extending along both longitudinal facades, the building also features a corbeled brick cornice and an eastern parapeted gable end. A two-story brick addition with stepped gable parapet ends was built at the western end of the depot around 1916. Once graced by a monitor roof and flanked by loading platforms, the depot still retains its original utilitarian character.

The Chesapeake and Ohio Railway built its freight depot on the north side of the 1200 block of Jefferson Street in 1894. It is a two-story, yellow brick building that extends 300 feet in length with offices located in a clipped gable-roofed section at the western end of the building. A gable-roofed brick extension was added to the east at an unknown date. The depot displays typical late 19th-century building details such as recessed brick panels, corbeled brick cornices, and segmental-arched windows. Loading platforms on both sides of the depot are still intact.

Most of the commercial buildings on Jefferson Street date from the first decade of the 20th century; however, a few are known to pre-date the turn of the century. The Piedmont Storage and Leaf Tobacco warehouse of 1895, for example, is located at 1323 Jefferson Street. A 5½ story brick building with two-story stone side walls, the building possesses an Italianate double pedimented parapet front, brick pilasters, and corbeled brickwork. Another pre-1900 building on Jefferson Street is the Anheuser Busch Brewery (now Lynchburg Foundry Co. Warehouse) at 1312-1328 Jefferson Street. Adjacent to the C. and O. Railway Freight Depot, the handsome brick building was constructed ca. 1897 and exhibits a decorative brick cornice and encircling parapet with castellated projections.

An important row of four three-story, brick commercial buildings comprising most of the 700 block of Commerce Street was built in the early 1890s along what was then a major commercial street in Lynchburg. The district's most intact row of buildings dating from the 1890s, the individual buildings have similar characteristics - decorative brickwork, arched fenestration, and paneled and arcaded brick parapets, but each is distinctly different in facade design, creating a streetscape of varied textures and patterns.

A similar row of three buildings dating from the first decade of the 20th century is located in the 900 block of Commerce Street. The five- and six-story brick commercial warehouses at 918, 920-922, and 924-926 Commerce Street are less decorative and have

7. DESCRIPTION -- Architectural Analysis

shallower three dimensional facades than their predecessors in the 700 block; however, corbeled brick cornices and parapets and arched upper-story openings remain common characteristics of both rows of buildings.

Three turn-of-the-century buildings on Main and Commerce streets are unique in the district. The highly decorative commercial building at 1300-1302 Main Street was erected in 1902. Intricate brick patterns in panels, cornices, and parapet create an interplay of light, shadow, and texture that are essential features of this distinctive Victorian facade. Two similar warehouses at 1222 Main Street and 1220-1228 Commerce Street are also uncharacteristic of most of the buildings in the district. They are wide gable-ended brick structures with highly articulated stepped parapet fronts, recessed panels alternating with shallow pilasters, and arched or circular attic windows. One, and probably both, were originally used as tobacco warehouses. The building on Main Street proudly displays a datestone of 1899 at the top of its gable.

By the turn of the century, many warehouses or jobbing houses were being constructed on Jefferson Street with its ideal location parallel to the railroad tracks. During this period, Lynchburg was fast becoming a jobbing center due to its excellent rail connections between northern manufacturers and southern markets. Jobbers were essentially middlemen who stocked goods from manufacturers and sold them to wholesalers. Consequently, they needed warehouses close to rail lines and locations on Jefferson Street proved very convenient. One of the earliest such warehouses is the Craddock-Terry Shoe Corporation building at the southeast corner of Jefferson and Ninth streets. The refined brick structure, exhibiting characteristics of the Romanesque Revival style, was built in 1898, the year the corporation was founded. Originally, a four-story building on its Ninth Street facade, two stories were added early in the 20th century. The Ninth Street or main facade of the building is divided into three arched bays, each containing paired or tripartite windows per floor while decorative roundels with terra-cotta lions' heads are positioned between the uppermost arched bays. Built by the Lynchburg contracting firm of Wilson and Seay, the handsome building was a fitting edifice for what soon became the city's single largest employer.

Other jobbing houses were constructed on the north side of Jefferson Street in a consistent and compact building pattern. All are multi-story brick structures usually having corbelled brick cornices, high parapets, and segmental-arched openings, whereas the majority of buildings dating from 1910-1920 have fewer pronounced features. Windows are also usually wider and taller in the later structures. Examples include the two Barker-Jennings Hardware Corporation warehouses at 1009-1011 Jefferson Street, built in 1915, and at 1001-1007, built in 1918; the Bailey Pleasants Company warehouse at 1201-1207, built in 1911; the Smith Briscoe Shoe Company warehouse at 1117, built in 1905; the Kinner Montgomery and Company Warehouse at 1101, built in 1906; and the Jefferson Street Shoe Factory at 1301, built in 1913.

Early 20th-century buildings with Neoclassical or Italian Renaissance influences are represented by the Hill Brothers Shoe Company at 822 Commerce Street and the Bryan

7. DESCRIPTION -- Architectural Analysis

Furniture Company at 1216-1218 Main Street. Both brick buildings exhibit rusticated bases, quoins, heavy classical cornices, parapets, and pilasters. Bryan Furniture Company has wide arched upper-story fenestration with keystones while Hill Brothers Shoe Company has an elaborately carved stone entrance surround composed of heavy classical elements.

A particularly noteworthy structural element of the district is the Williams Viaduct which has carried vehicular and pedestrian traffic over the James River and Blackwater Creek since it was constructed in 1916-1918. Financed by three railroad companies and the city of Lynchburg and designed by engineer/architect B. H. Davis, the bridge is an extension of Seventh Street and connects downtown Lynchburg with Madison Heights in Amherst County. The gracefully arched reinforced concrete bridge is 1,600 feet in length and rises sixty feet above the river. Before it was constructed, a number of successive low-lying bridges had spanned the James River at Ninth Street. Subject to frequent flood damage, these older bridges were often replaced until the Williams Viaduct was constructed.

On May 13, 1913 the Lynchburg Chapter of the Daughters of the American Revolution dedicated a monument to commemorate the site of John Lynch's Ferry House, believed to have been the first building in Lynchburg. The monument, a boulder of native stone to which a bronze plaque is attached, is located at the foot of Ninth Street near the James River. It is a suitable monument to commemorate the first commercial activity that would later dominate the Lower Basin area after John Lynch's ferry ceased to exist.

JEFFERSON STREET

1100 BLOCK

1101: Kinnier, Montgomery and Co.; Reams Furniture Co. Warehouse;
Warehouse; Italianate; 1906; Brick (5-course American bond);
7 stories; 6 front asymmetrical bays; flat parapet roof (standing seam
metal); paired 6/6 double sash windows with segmental-arched heads with
keystones, corbeled brickwork, paneled brick parapet.

1117: Smith Briscoe Shoe Co. Warehouse. Strother Drug Co. Warehouse.
Warehouse. Vernacular. 1905. Brick(5-course American bond); 8
stories;
16 front asymmetrical bays; flat parapet roof (not visible); tall 16/16
double sash windows with tall segmental-arched heads; multi-story brick
elevator tower added at rear.

1200 BLOCK

1200-1226: C. and O. Freight Depot. Freight depot. Vernacular. ca.
1894; Brick (stretcher bond); 2 stories; 3 front symmetrical bays;
gable roof with parapet and clipped ends-front section with hipped rear ell
(composition shingle); front section has central front gable with round attic
window, segmental-arched windows and transom over central entrance, brick
pilasters at front and along sides of rear ell, loading platforms on both sides
of rear ell with overhanging eaves, gable-roofed brick addition to rear.

1201-1207: Bailey Pleasants Co. Schewel Furniture Co. Warehouse.
Warehouse. Vernacular. 1911. Brick (5-course American bond); 5
stories; 3 front asymmetrical bays (originally 11); flat roof with parapet
ends (not visible); segmental-arched openings, stone foundation, stepped parapet
ends, 1st-floor openings mostly blocked up in 1930s; one-story, 20th-century,
concrete block rear addition has access to Commerce Street.

1213-1217: Conner Produce Co. Cold Storage. Cold storage warehouse.
Vernacular. 1904. Brick (5-course American bond); 2 stories; 5
front asymmetrical bays; gable roof (standing seam metal); segmental-arched
openings, 4/4 double sash windows, loading platforms, exposed scalloped eaves.

1221-1225: Jefferson Street Shoe Factory Warehouse. Farmer's Seed and
Supply Co. Warehouse. Vernacular. 1909. Wood frame (sheet metal);
1 story; 5 front asymmetrical bays; shed roof (not visible); some of the
original openings covered over by recent sheet metal cladding.

8. SIGNIFICANCE -- Historical Background

As the town and countryside grew, the ferry became inadequate, and in 1812 it was replaced by the first in a succession of bridges that spanned the James at the foot of Ninth Street. In 1826, the town limits were extended to encompass the waterfront, and two years later, foundations were laid for a pump house at the foot of today's Seventh Street. The increased water supply that it afforded was the signal for the establishment of mills and factories in the area. Even so, according to one observer of the time, the waterfront presented a fascinating mix of the pastoral and the commercial:

The banks of the river are lined with towering trees; the enormous Sycamores, with their outstretched branches: to this we may add, freight boats, the skimming wild ducks, farms and pleasure grounds, falling gardens, rolling carts, rattling stages, thundering wagons, and a busy multitude.

In 1835 a cotton factory was built alongside Blackwater Creek, and in 1836 yet another, sturdier bridge replaced the first one across James River. But the major activity at this time was the construction of the James River and Kanawha Canal. Lynchburg was the terminus of the "First Grand Division," the 146-mile stretch from Richmond, and as such had to have extensive docking facilities. These were primarily provided by the Lower Basin, the broadened expanse of canal just downstream from Ninth Street. On December 3, 1840, the first packet boat arrived in the basin, and was greeted with much fanfare. Unfortunately, the principal speaker, who stood on the deck of the General Harrison to deliver his oration, lost his balance and fell into the canal! That put only a temporary damper on the festivities, and soon the canal brought even more commerce and industry to the Lynchburg waterfront. A number of remnants of the canal still exist. Properly restored and interpreted, they could serve to illustrate the busy scene that characterized the area during the antebellum era.

After the canal came the railroad. The Virginia and Tennessee, established in 1849 largely as a result of Lynchburg's entrepreneurial spirit, was the first. Lynchburg was both the eastern terminus of the line and the center of its operations. Tracks were laid, and a depot was built between the canal and the river at the foot of Ninth Street. Later these were augmented by an engine house, machine shops, roundhouse, and other facilities, all located near the canal and Blackwater Creek, in a part of the waterfront designated The "Western Grounds." The V & T was soon joined by two other lines: the Southside and the Orange and Alexandria. By 1855 a Richmond newspaper acknowledged that Lynchburg was "the hub in the Virginia system of railroads." As before, commercial establishments came to be located near these major transportation systems, and one of the largest buildings erected during this period still stands at the corner of Ninth and Jefferson streets. Now designated the J. W. Wood Building, this brick structure is embellished with a fine cast-iron facade on the first floor of its principal facade.

Section number 8 Page 8.2

8. SIGNIFICANCE -- Historical Background

During the Civil War, the waterfront was the scene of frenzied activity. Because of its excellent transportation facilities, Lynchburg became a major camp for Confederate troops. When the need arose, soldiers bivouacked here were sent to the theater of war via the railroad or the canal. Those who were wounded were sent back to recuperate in one of the many hospitals hastily set up in the tobacco warehouses "uptown." Perhaps the most somber scene the waterfront witnessed was on May 13, 1863, when the body of Stonewall Jackson was transferred here from the railroad to the packet boat Marshall, to be carried upstream to Lexington for burial.

After the war, the waterfront continued as the focus of Lynchburg's industrial activity, but there were changes. In 1870, yet another bridge replaced the existing one, and when this was washed away in 1878, it was quickly replaced by another. In 1879, the Richmond and Alleghany Railroad Company replaced the canal, which had ceased to be a viable enterprise. By 1880, the many railroads along the waterfront caused a visitor to remark:

A bewildering scene meets the eye of the traveler as he alights...in Lynchburg. Such a medley of railways and watercourses is rarely ever seen outside, and still less inside, of a city.

As the "New South" continued its recovery from the wounds of war, the Lynchburg waterfront continued to expand as the center of the city's industrial activity. The Piedmont Mills, established before the war, had replaced its earlier structure by 1875 with the large, impressive building at the corner of Jefferson Street and Horseford Road. In 1882, a new pump house was completed to serve a greatly expanded city water system. Damaged by a flood in November 1885, the building was demolished soon thereafter. It once stood on the river bank adjacent to Williams Viaduct. During the last years of the 19th century and the first of the 20th century, the southern side of Jefferson Street between Ninth Street and Piedmont Mills was built up with tall, plain brick buildings. These were "jobbing houses," essentially warehouses where the goods of wholesale distributors were stocked while awaiting shipment throughout the South. Lynchburg was ideally situated for this trade, midway between northern manufacturers and southern markets, and Jefferson Street, with railroad tracks running down the center, was the best spot in town for the jobbers. Soon Lynchburg began not only to store products for its huge southern market, but to manufacture them as well. In 1898 Craddock-Terry Shoe Corporation established its manufacturing operations on the corner of Ninth and Jefferson streets, and in a few years became the largest employer in the city. At about the same time, two large cast-iron foundries established their presence in the area. Both sought large level areas for their extensive operations: Glamorgan upstream and Lynchburg Foundry downstream.

By the mid-20th century, however, the waterfront had begun to lose its appeal as a setting for manufacturing and commercial enterprises. Transportation changes had occurred, markets had relocated, and increased space -- more than could be afforded in this traditional center -- was needed for expanded operations. In the 1950s, the

8. SIGNIFICANCE -- Historical Background

Lynchburg Expressway was opened, and an industrial park was created adjacent to it, complete with rail and trucking access. By 1970 over thirty industries and businesses had been lured to this new manufacturing and distributing center. The waterfront, which had been the center of such activity for so long, began to take on a neglected, abandoned aspect. Some structures were demolished, but others -- more than may be evident at first glance -- remain. Still other features (among them, the canal) lie hidden behind or below the accretions of later years, waiting to be uncovered and appreciated once more. The Lower Basin area has potential to be reborn -- perhaps not to become the city's main commercial center again, but as a place of both commemoration and renewal. It is hoped that the historic district designation will help to revitalize the Lower Basin area and serve as a suitable accomplishment for the city's bicentennial celebration.

Boundary Justification

The Lower Basin Historic District encompasses the largest concentration of commercial and warehouse buildings in the city of Lynchburg. The Lower Basin of the James River and Kanawha Canal extended from Ninth Street to about Horseford Road; therefore all of the commercial buildings in that area are included in the district. The district's eastern boundary is the James River. The southern boundary includes only those buildings dating from the district's period of signifiacnce which explain the offsets in the southwestern area of the district. Buildings further south on Concord Turnpike and south of the 1300 block of Main Street are mostly noncontributing. A large number of noncontributing buildings and parking lots characterize the area north of the 1200 block of Main Street and on the west side of the 600-1100 blocks of Commerce Street; therefore, these areas were excluded from the district. Williams Viaduct, dating from 1916-18, is an important transportation-related element of the district and is included in the district; however, the southern tip of the peninsula formed by the James River and Blackwater Creek was excluded due to the large number of recently demolished buildings that once stood in the area. North of Williams Viaduct primarily a residential neighborhood exists.
